GooglePixelMods The Mod Team

Battery Megathread (May 2025)

Welcome to the Battery Megathread, where you can find information and get assistance with any battery-related issues your Pixel might be facing. *All battery-related posts made outside this megathread will be removed.*

Before you make a comment, try these troubleshooting tips:

Stay up to date with the latest version of Android and your apps.

Although some people may argue that a system update ruined their battery life (and occasionally this is the cause), it's always a good idea to make sure your device is running the latest version of Android (check anytime in Settings > System > Advanced > System update > Check for update). Security patches and major updates bring fixes not only for battery-draining bugs, but also protection against viruses and malware that may be stealing your charge, or worse. Individual app updates may also provide performance improvements to your battery.

Check for power-hungry apps.

Despite battery-saving features like [Doze](#), some apps may still be able to drain away your charge undetected. Try the following steps to identify any power-hungry apps.

- Make sure that the "Apps consuming battery" notification is enabled, and wait a few minutes to see if it appears. (Find the toggle in Settings > Apps & notifications > See all ___ apps > More options (the triple dot) > Show system > Android system > Notifications > Other)
- Check the battery usage of your apps in Settings > Battery > More options (the triple dot) > Battery usage. Remember that battery life may be reduced with usage of certain features (location, Bluetooth, etc.) and apps (gaming, video, etc.).
- Turn on battery optimizations for all apps, (Under Settings > Apps & notifications > Advanced > Special app access > Battery optimization, and tap each app to change it to *Optimize*), and also enable Adaptive Battery, which limits rarely used apps (Under Settings > Battery > Adaptive Battery).
- Force stop or uninstall any new apps and monitor battery life. (You can do this by going into Settings > search for *appName* & select *appName*)
- Temporarily disable all installed apps with Safe Mode, to see if an existing/updated app is the problem. (Enter Safe Mode by pressing & holding the power button, and then pressing and holding *Restart*, and finally tapping OK. To exit Safe Mode, restart your phone as normal. You may have to sign into some apps again.) If your battery life improves, use the aforementioned methods on older apps.

Investigate battery intensive features.

Some functions on your phone may use more power than you expect, especially in different scenarios. Take a look at this list for **a few** possibilities:

- **Bluetooth** is notorious for its high-energy usage, especially when actively transferring data. Turn it off if it's not needed, and if you do, consider looking for Bluetooth Low Energy devices, which need much less power.
- **Location** also uses quite a bit in order to pinpoint your position. Turn off Wifi/Cellular data/Bluetooth location accuracy (Settings > Security and Location > Location > Advanced > Battery saving > Google

Skip to main content

Create

stay connected, no matter if you're in the forest or underground. If you don't require a cellular connection (for example, if you have Wifi Calling), put your phone into Airplane mode and re-enable Wifi/Bluetooth if needed.

Contact Google Support.

Google's dedicated Pixel support team may be able to help diagnose and fix your issue. Find them in Settings > Tips & Support, or just ask your Google Assistant "troubleshoot my battery".

IF ALL ELSE FAILS, factory reset your phone.

Sometimes wiping your phone is all that's needed to bring your battery back to life. Google Drive and Google Photos do a decent job with keeping your apps and data (check in Settings > Google > Backup > Back up now **and check** Google Photos > sidebar (the three lines) > Settings > Backup and sync), but **please personally make sure that everything is backed up to something off your phone**. To wipe your phone, [follow the steps here](#).

*This megathread will be replaced on the 1st of each month at 10:00 UTC. If the month is wrong, [search for the latest one here](#).
To return to the Superthread, [click here](#).*

rattlesnk22 • 6mo ago

Just found out this huge battery drain was an issue. I thought my phone is toast. Its pixel 7 and last month battery is dreadful. And yesterday i noticed the battery drop from 35% to 0 in less than 10 seconds. And just as im writing this, my phone was 100% one hour ago, its now 40%. What a joke that this is not fixed yet. Tried disabling all kinds of stuff that folks here wrote, and nothing. Last hope is beta program, since i dont want to factory reset my pixel.

[Skip to main content](#)

Create

I am also facing the same issue, did you find any fix for this?

Sea-Peach7228 • 5mo ago

Same here :(it's just now starting to do it for me

Crafty-Bench-9564 • 6mo ago

Turning this off has fixed mine , along with loads of others ! Turn off " battery health assistance " it was added on the android 16 update .It's an AI battery assistant.Turn anything AI based off .

hahnsol • 8mo ago

uranimum18 • 8mo ago

Has anyone found a fix for this yet? I've already uninstalled Instagram, but it didn't help. I also cleared the cache for Android System Intelligence, but there's been no improvement. My battery still drains massively, and sometimes it drops from 30% to 0% in just a few seconds.

I thought upgrading to Android 16 might fix things, but it's actually made everything worse. I'm really fed up with this – it's incredibly frustrating.

Crafty-Bench-9564 • 6mo ago

Yes ! Turning off "battery health assistance"

hahnsol • 8mo ago

Merth1983 • 8mo ago

I have a pixel 7 pro and since about Thursday it is randomly going from nearly full battery to saying the battery is almost dying and then it just shuts off. I removed Instagram. That didn't make any difference. I've checked the battery settings and everything shows as normal. The only time my phone will not shut off is if I'm using it while it's plugged in which is not very convenient. It's getting really frustrating and I'm I'm going from loving this phone to absolutely detesting it.

Merth1983 • 8mo ago

Ended up filing a claim with asurion. They're sending someone to my house tomorrow to replace the battery. Hopefully that fixes the issue. Nothing else worked.

[Skip to main content](#)[Create](#)**Merth1983** • 8mo ago

Funny story. So a few days ago I tried to file a claim online but was told I needed to call in and talk to someone to file a claim. Called and the woman was very nice. Walked me through it and told me I could have someone come out to my house from uBreakiFix to take care of it. Scheduled it for yesterday. Thought all was good. Yesterday morning I got a call from uBreakiFix saying that they are not allowed to replace Google batteries at homes. I would have to bring it in to their store and there's only one in my area and it's like 40 minutes away. They also said that the claim filed for me was filed as a broken screen, not a battery drain issue. I thought maybe that was just a clerical error because I did file a claim a few months ago to replace a cracked screen. That process worked seamlessly.

So I called asurion back and started a new claim and they again confirmed that I should be able to take it in under warranty and have the battery replaced at uBreakiFix. They also tried to sell me some all home device coverage plan or some crazy nonsense. I told him I wasn't interested in any new policies. I just wanted to get my phone fixed. I made an appointment online and went in at 10:00 a.m. this morning. The guy was very helpful but he explained to me that through Verizon, asurion does not cover the cost of replacing batteries. Even if the phone is under warranty. If I had AT&t service, it would be covered, but apparently Verizon has never voluntarily covered battery replacements through asurion. He also told me that once again the new claim that a different rep had filed for me the day before was also filed incorrectly as a broken screen.

After examining my phone, he noticed that there did appear to be some swelling from the battery. He said that I could either file a replacement claim with asurion and pay the out of pocket deductible towards them replacing the phone, which he said would be about \$240. My other option would be to just go ahead and replace the battery there and that would cost \$169. I am literally like \$70 away from paying off this damn phone and it worked perfectly fine until last week so I decided to go with the battery swap instead of giving Verizon/ Google more of my money. They had it fixed in under 2 hours and it's guaranteed for a year. So far it seems to be working as it used to.

I mentioned to the repair guy that I'd seen a bunch of articles saying that this issue was happening a lot to people. After a recent update by Google. Told him I suspected that. Maybe that update was secretly meant to negatively affect older model phones in order to encourage people to buy new phones. I recall reading stories about Apple doing that a while back. He said it very well could be true. He mentioned the issue with the pixel 4A batteries being so bad that they were forced to give out free battery replacements to everyone who owned one of those phones.

**hahnsol** • 8mo ago**ntcue** • 8mo ago

I've got a Google Pixel 7a as a company phone and I only use it for 2-factor authentication. The phone usually sits on my desk for over a week without the need to charge. Since about 2 weeks now it drains within 1-2 days from 100% to 0% just laying around. The system apps are shown as the main battery

[Skip to main content](#)

Create

Also my mother reported a fays ago that her Pixel 7a also drains the battery way faster than ever before. I really don't want to do a factory reset because we do not synchronize data with Google and it would be annoying to setup everything again by hand. I Google not checking their system updates? I should not be the solution to factory reset a phone to solve these kind of issues.

Meanwhile my Pixel 6 Pro does not show any issues.

**FabsudNalteb** • 8mo ago

I don't have Instagram or other Meta apps on my phone. Still experiencing this issue intermittently.

**HipsterDashie** • 9mo ago

Just had another day of my Pixel 8 Pro draining faster than it could charge overnight. Google says to update Instagram to fix this problem, yet I don't have it installed on this phone, not have I ever installed it. I don't even have an Instagram account!

**t1tanium** • 9mo ago

Oh man, I thought it was just me. My pixel 8 doesn't even last half a day with light use and it's always warm. Only started happening in last week.

**Vast_Umpire_3713** • 9mo ago

Why is that happening with this update?

**raf_1908** • 9mo ago

Pixel 9 Pro XL here, new Google Play System update (not Android update) came in yesterday, also AI Core app was updated, it looks like the Instagram/battery issue was fixed but now WIFI is losing connection very badly, c'mon, this is not what the experience of using Android Pure should be, awful update after update.

**Ottermiral** • 9mo ago

Pixel 9 Pro

According to this post, The *instagram* issue should be resolved as of may 28th with *382.0.0.49.84*
https://www.reddit.com/r/GalaxyS25Ultra/comments/1ksu19w/latest_instagram_updates_causing_overheating_and/potential

[Skip to main content](#)

B) use instagram version, e.g. 379.0.0.41.8 from APK mirror as suggested under the link. (please be careful when using apkmirror; there are many ADs that show fake 'download' buttons (those are usually black/white instead of orange) .

Sauce: https://www.reddit.com/r/GalaxyS24/comments/1kpl6vv/instagram_battery_usage_too_high/

**RedBalloone** • 7mo ago

That's so wild. I don't even have Instagram on my phone and I'm having the same issues as everyone in this thread. Pixel 6A

**Ottermiral** • 7mo ago

Pixel 9 Pro

maybe a different META App (facebook / messenger) in combination with the 'android system intelligence'. I'd suggest to delete the cache for android system intelligence, uninstall all meta apps and reboot the phone.

**RedBalloone** • 7mo ago

Thank you! I'll try the cache. Unfortunately, FB cannot be uninstalled on my phone lol

**No_Engineering_4190** • 9mo ago

Yeah, it looks like since yesterday after the upgrade of Instagram it has been resolved for me

**Ill_Alfa7884** • 9mo ago

Pixel 9 Pro

Lost cellular connection twice. Only a total reset brings it online again.

Now I'm going for the beta program 😊

**raf_1908** • 9mo ago

I'm losing wifi connection at home and very close to my modem, c'mon google, you can do better

**After_End_238** • 9mo ago

Posseggo un Pixel 9 pro XL acquistato il 3 maggio. Eseguito subito l'upgrade ad Android 15 e l'aggiornamento della patch di sicurezza di maggio. Inizialmente credevo che il telefono facesse buone performance, finché non ho osservato meglio l'esecuzione in background di Instagram che addirittura riportava un 60% di consumo pur non utilizzandola per diverse ore. Il telefono l'altra sera ha coperto circa

orecchie da mercante nel momento in cui ho segnalato che più utenti stanno riscontrando gli stessi problemi. Sembrano evitare l'argomento. Sinceramente non voglio restituire il dispositivo perché temo che, pur avendone un altro, il problema resterebbe.

**[deleted]** • 9mo ago

I "fixed" battery and overheating problems by enrolling in android 16 beta program, after I installed it battery and overheating issues are gone. Now I am waiting for new issues to pop up because of beta program 😊 but atleast my battery is same as before. You cant leave android 16 beta program without hard reseting your phone and deleting all, so be careful.

**Illustrious-Pie-4485** • 9mo ago

hello, if I install the beta version, will I then receive the stable version normally when it arrives? if so, will I then continue to receive the beta versions that must be installed? thanks

**[deleted]** • 9mo ago • Edited 9mo ago

Yes, you will receive stable version as all users. When you install stable version you can opt out (same link where you joined beta) from beta program without factory reset and receive only stable updates in the future.

**Ecstatic-Process209** • 9mo ago

I'm going to have to keep an eye on my battery and see if it fixed mine too. If so that's a pretty cool thing cuz my pocket used to get hot as f*** I thought the battery was going to blow up like an old Samsung

**3xn0pe** • 9mo ago • Edited 9mo ago

Pixel 7a user here. Have similar issue, where battery drains really fast then shuts off. Toward the end of the battery charge, I can see it dropping by several % points per second. It is insane. I went to Google Pixel Help Center, and found a 'Contact Us' option that allowed me a quick resolution option where they offered me either a \$200 USD cash or \$300 USD Google Store coupon for a Pixel replacement. I waited a bit before proceeding, wanted to find more information on this first, but when I tried to proceed and accept it failed with a workflow error. When I tried to start over, I could no longer even find the 'Contact Us' option. It was just ... gone. Anyone else seen this offer or used it? Do you still have your 'Contact Us' option? What is even going on here.

**3xn0pe** • 9mo ago

Update: I just got an email that said I have gotten my rebate coupon. So it seems to have worked, despite the error. I recommend taking a look at this. Not sure how I feel about paying another \$300-

[Skip to main content](#)

**Professional_Poem912** • 8mo ago

Can you kindly guide me through the process , I am facing similar problems with my pixel 6 and I don't know how to make it work again I guess I have to factory reset it

**mackid1993** • 9mo ago

Pixel 9 Pro XL

I think I figured it out: Google Play Services is constantly running in background ever since the May update. certain apps seem to be pinging it with *something* which causes the issue. Facebook and Instagram are culprits. I uninstalled those, but also the Whisker app for my litter robot seemed to be causing it too. I had that that app set to Unrestricted battery due to delayed notifications. I changed it back to optimized and usage **seems** to be normal now. It's definitely going to differ based on what's on your phone. Fortunately June is right around the corner and we'll get a new patch soon.

**FabsudNalteb** • 9mo ago • Edited 9mo ago

How did you figure out what app is causing the constant pinging to Play Services? Suddenly a few days ago my phone won't even last 4–5hrs of usage, is always hot, yet I'd be able to get full days just a few days ago. I don't have the Facebook app and the phone is always warm to the touch.

**mackid1993** • 9mo ago

Pixel 9 Pro XL

I have no idea, it's definitely a bug because Play Services should not be in the background the entire day. I noticed it was much worse when only on mobile data and better on WiFi. Late last night I revoked Unrestricted Mobile Data for Google Play Services and today it only used 5% of by battery. I have a feeling it is more than a handful of apps which is why it seems to only bother some people more than others. It depends on what you have installed. Try revoking that permission and removing Facebook and Instagram until a patch comes out.

**FabsudNalteb** • 9mo ago

How are you detecting its background usage? Through another app or through something in the phone settings?

**mackid1993** • 9mo ago

Pixel 9 Pro XL

Battery usage in settings....?

**TorturedCactus** • 9mo ago

Same. My P9 SOT is absolutely wrecked with this update. I hope they do something soon.

[Skip to main content](#)

Create

my pixel 7 pro's battery has also been draining quickly after the latest update. from 7-8 hrs SOT, it's now only at around 4-6 hrs. the phone has also been heating up more even when I'm using it in a cool room.

__Tomato__ • 9mo ago

exact same!

Delicious-Grape-4481 • 9mo ago

I tried factory resetting it yesterday and so far it hasn't been heating up as much (but it still runs quite warm). But the battery still drains quickly, I only got about 4 hrs SOT today. It sucks that we need to do a factory reset to address some of pixel's issues though.

kazuya955 • 9mo ago

Device is Pixel 9 Pro XL

Hi guys am I the only one that is experiencing a huge battery drain problem with my Pixel? For instance I use the 80% limit charge to preserve battery since I bought it in January. Regarding screenshots below, I charged my phone like at 21:00 and did not use it much then overnight I activated extreme power saving mode and airplane mode. And this morning I wake up with around 40% battery drained. This is going on for about two weeks, don't remember if it started happening right after the May update, sometimes is worse other not...check out the screenshots for detailed battery drain stats: <https://imgur.com/a/PtuQ4iU>

EtNocturne • 8mo ago

My 9 pro battery is terrible now. I can't make it through the day without charging and I am a light user. Pre-update on a bad day I was hitting 40-50%.

kazuya955 • 8mo ago

I returned my old one and got a new one. Today after a week of use had 7 hours of screen usage reaching 13% from 100%. Guess in my case was a bad battery.

kazuya955 • 9mo ago

Guys for instance, no action solved my problem. Not uninstalling power hungry apps nor disable background usage for most applications.

For your info I also talked with Google assistance and they told me that sounds like a hardware problem, so I asked Amazon to swap my phone (it was 5 months old) with a new one. I'll update this comment either if the problem persists or not.

[Skip to main content](#)

Create

Almost everyone posting here is experiencing the same thing

**kazuya955** • 9mo ago

You're right, my bad.

**No_Engineering_4190** • 9mo ago • Edited 9mo ago

Omg, this problem is so annoying! I need to charge my phone many times per day. I have a Pixel 7 Pro.

**Radiant-Structure233** • 9mo ago

Same issue here on Pixel 8a. Got the phone in January, battery used to last a day and a bit, ever since March it's been getting less and less, now it needs charging atleast 3 times a day with moderate use. Biggest issue seems to be mobile network. it's usage shows upwards of 77% in settings. This never used to be the case!

**[deleted]** • 9mo ago

Pixel 9 Pro acheté neuf avec Android 15 préinstallé.

Mise à jour installée quand elle a été proposé vers le 20 mai.

Aucun bogue.

Je charge avec un Google 30w.

Je ne clique jamais sur le bouton de recherche de mise à jour.

Je me demande si ces gens qui ont tas de bogues ne se précipitent pas un peu trop.... Et qu'ils serviraient de BETA testeurs ou du genre.

C'est mon 3eme Pixel, j'utilise Android depuis les débuts et je n'ai jamais les bogues qui sont relatés.

Pareil avec Windows et même comportement vis à vis des MAJ.

**Altruistic-Panic9306** • 9mo ago

I have having the battery drain issue with my Pixel 8 and could go all day and not charge until I went to bed and now have to multiple times a day and I hate updates and usually avoid them until forced or keep getting the measages I am overdue and wish I didn't do the May one. Will this ever be fixed?

[Skip to main content](#)

Create

**stace-cadet** • 9mo ago

Pixel 8 - same issues as everyone else

**vynal90** • 8mo ago

Im even on Graphine os and my battery on my Pixel 8 is really bad

**mmmmbeer76** • 9mo ago

Pixel 9 Pro XL, battery is terrible, started getting bad after the March update, the April and May ones have made things worse. One charge used to do me for 16+ hours and I'm a heavy user, now it needs charging three times a day

**TheMightyPoro** • 9mo ago

Pixel 7 Pro here. After May update I experience battery drain and overheating for the first time after almost three years. In battery settings it shows that biggest drainer is "Processor" which uses like 30-40% of battery. Then is display and Wi-Fi. This never happened before and there must be surely something wrong with the update.

**Lamethrower** • 9mo ago

6 pro battery life absolutely destroyed with the latest update.

**nujimasu** • 9mo ago

Pixel 7a here. Just checked my history on accubattery and looks like battery is draining 2x faster after May update.

**Vast_Umpire_3713** • 9mo ago

Yes almost 2 times faster

**Cubexel** • 9mo ago

[Skip to main content](#)[+ Create](#)

problem

**tikeii** • 8mo ago

Pixel 8

Having the same problem with my pixel 8. Around the 60%-80%, it would instantly drop to 20% or so and drop 1% per second until it was dead. No clue what is happening and been happening daily now. Contacted pixel support, but nothing so far.

**humanreboot** • 9mo ago

You might be entitled to financial compensation from Google for the 7a.

**Cubexel** • 9mo ago

Good thing i returned it on warranty to Amazon and they're giving me back all I paid. Could I also get compensation from Google after this?

**zamach** • 9mo ago

Pixel 9 Pro. Started installing the update on 36% battery. 5 minutes later it was at 18% - what the hell is going on? Did they increase the safety margin virtually decreasing the usable capacity of all batteries?

**JulieDwyer42** • 9mo ago

Battery was fine on Pixel 8 Pro until May security update.

**Intelligent-Ad-3486** • 9mo ago

Pixel 7 pro. It's been atrocious lately. I thought it was because of me overheating the phone recently. But seems it may be because of the update.

**TheMightyPoro** • 9mo ago

Same here. Biggest drainer is "Processor"

**Intelligent-Ad-3486** • 9mo ago

How do you know?

**TheMightyPoro** • 9mo ago

[Skip to main content](#)[Create](#)**waytooneutral** • 9mo ago

Processor use 60% since last full charge. Didnt even use it that much..

**Intelligent-Ad-3486** • 9mo ago

Sucks it's like half as good as it used to be

**Intelligent-Ad-3486** • 9mo ago

Mines network data at 34% ambient display 18 CPU 18

**fedewars** • 9mo ago

Pixel 8 here.

What's been described in this thread is also happening to me. The phone is relatively new (few months old), and never had such a little battery life. I now experience quick battery drain (few hours), and excessive overheating.

Everything started showing after the May update. I really hope they're going to fix this, now my phone needs to be recharged twice per day.

**Tutmoses1** • 9mo ago

Pixel 9 pro battery runs hotter than before and requires multiple charges daily.

**Djfe** • 9mo ago • Edited 9mo ago

I've had some connectivity issues since the update on my Pixel 7 Pro which might cause battery drainage:

my primary Sim (1&1 ISP in Germany) my secondary Sim might not have been affected atleast when I switched usage to the 2nd SIM it worked right away (Telekom ISP in Germany) while primary just kept on trying to connect and failed (even after a restart in those cases, I blamed the isp back then, this issue has resolved itself by now)

WiFi also had some connectivity issues. it helped to reboot my router or they resolved themselves by restarting wifi on my phone.

so I'm not sure whether these connectivity issues even were due to my phone/the may update but it could be related. I didn't call my isp, yet because the problems went away after a few days. during those days I used my secondary SIM instead.

[Skip to main content](#)[Create](#)

cpu 36%

inactivity display 14%

cellular 11%

screen 9%

wifi 8%

I only let my phone charge to 80% which is why my last full charge was 2days ago

I already disabled background usage of Instagram and Facebook lately. I'm not sure anymore if it was due to battery draining or something else though.

the phone itself still doesn't last as long as before.

I'm mostly at home and logged into wifi. Several energy saving features are disabled on my phone because I don't want those to interfere with my usage. I keep cellular data turned on at all times, disabled wifi scan throttling and enabled full GPS/gnss scan in the developer settings. and I deactivated the feature of the activity manager in the developer settings: Cached apps freezer. and I disabled adaptive connectivity (cellular). still the phone drops a lot quicker these days than it used to in previous months.

hope this helps somehow

Busy_Quote2292 • 9mo ago

I'm also experiencing a pretty bad battery drain on my Pixel 6. I used to get about 5.5-6h of SOT with 100%, but now I'm lucky to get around 3.5-4h.

This started happening right after the May update.

I'm noticing high use of the battery from Mobile Network (system), even though I live in a city where I get full signal. I have disabled 5G. I have tried lots of different things. I've also disabled mobile network while on WiFi (developer settings).

I must say, this is not the first time the battery started taking a huge hit due to Mobile Network usage. There have been other monthly updates where this was the case!

From my battery usage chart (over four days of usage):

- Screen time since last full charge: 12h 33min

Battery usage by systems:

- Mobile network 40%
- CPU 25% (total 21h 7min)
- Screen 7% (total 12h 33 min)
- Ambient display 6%

[Skip to main content](#)[Create](#)

I would expect normal behavior to have the screen and cpu record higher than the mobile network...

[deleted] • 9mo ago • Edited 9mo ago

PIXEL 9 PRO - acheté il y a 1 mois, neuf, avec Android 15 préinstallé.

Il n'y a eu pour l'instant que 2 mises à jour système (sécurité).

May 25 Update

Je n'ai aucun bogue avec la mise à jour de Mai 25, à ce jour.

Je charge avec un chargeur Google 30W. Actuellement je m'en sers peu donc je le recharge tous les 2 jours (30% en fin de journée après 2j).

Je ne force pas l'installation de la mise à jour. J'attends qu'elle me soit proposée et en attente dans les mises à jour téléchargées.

Pour moi, la mise à jour m'a été proposée le 19 Mai 25. Je l'ai installée immédiatement.

J'attends de possibles changements dans les jours à venir, voyant le nombre de feedback négatifs.

Je suis fan de Pixel et de Google, c'est mon 3eme (6a, 7a, 9Pro). J'ai failli partir sur du Apple voyant le nombre de problèmes avec les mises à jour Google. Mais j'ai eu une promo à 699e sur le Pixel 9 Pro. Le rapport design/qualité/fonction/photo/prix était en faveur du Pixel 9 pro.

J'utilise des appareils Android depuis que ça existe.

Je ne regrette pas mon achat pour l'instant.

Je viens de m'inscrire pour suivre les thread sur les pixels et d'autres sujets.

J'ai pas mal bidouillé des vieux Android avec sdk et autres outils. Changement de ROM, dézonage, etc. (XDA Dev).

Les appareils récents ont bien avancés et je m'en sers en version STOCK.

bigdoge007 • 9mo ago

Same issue here Used to charge once a day now it doesn't last me till noon . Pixel 9 regular user , phone's only 2 months old so I know my battery hasn't degraded

Losprin • 9mo ago

Pixel 8 pro owner here: Can confirm both battery drain (I found this morning the device turned off after go to sleep with more than 50%) and overheating after the update

[Skip to main content](#)[+](#) Create**nivse** • 9mo ago

Pixel 8 Pro

Same. Also P8P.

**Xolider** • 9mo ago

Same issue since May update with m'y Pixel 9. It went from 50% down to 10% in a half day with 15min usage.

**littlejollypanda** • 9mo ago

Definitely think my battery isn't lasting as long. Like I'm a heavy user and used to still be able to get through the day but now I'm having to charge early afternoon if I'm not in work and in the evening if I'm in work

**YouOdd4072** • 9mo ago • Edited 9mo ago

Same issue here with my pixel 7, from a SOT of 6-8 to max 4 if I'm lucky. It also seems to drain a lot faster below 40%. The temperature also seems very high for no reason? Please fix this asap google.

**RD1-HANZALA** • 9mo ago

Yes the same issue with my pixel 7 pro

My 8 pro has had noticeably shorter battery life and has felt very warm in hand lately. Another issue I've had for the last few months is intermittent loss of wifi and Bluetooth functionality. I disabled 5g on my phone which has helped somewhat. Might go back to Samsung for my next phone due to this even though I'd prefer not to.

Create

warranty for the 7a battery issues. my 5a back in the day randomly bricked, and i imagine the issues may have been the same there, without google doing anything about it. now at least, thanks to the two now-deleted posts, i can take mine in tomorrow and have it taken care of

Pixel 6 user here, I've had this phone since it came out and after the update my battery just dies very fast but I haven't seen any heating issues. Or it might be my battery since I play games while charging although I always keep my phone cool with a phone cooler. The phone is still working smoothly and everything it's just the battery.

Edit: I forgot to mention that for me, whenever I use mobile data the area where the sim card is heats up like crazy. Not sure if this is normal but it's always been there.
