Battery Megathread (November 2025)

Welcome to the Battery Megathread, where you can find information and get assistance with any battery-related issues your Pixel might be facing. *All battery-related posts made outside this megathread will be removed.*

Before you make a comment, try these troubleshooting tips:

Stay up to date with the latest version of Android and your apps.

Although some people may argue that a system update ruined their battery life (and occasionally this is the cause), it's always a good idea to make sure your device is running the latest version of Android (check anytime in Settings > System > Advanced > System update > Check for update). Security patches and major updates bring fixes not only for battery-draining bugs, but also protection against viruses and malware that may be stealing your charge, or worse. Individual app updates may also provide performance improvements to your battery.

Check for power-hungry apps.

Despite battery-saving features like [Doze](#), some apps may still be able to drain away your charge undetected. Try the following steps to identify any power-hungry apps.

- Make sure that the "Apps consuming battery" notification is enabled, and wait a few minutes to see if it appears. (Find the toggle in Settings > Apps & notifications > See all ___ apps > More options (the triple dot) > Show system > Android system > Notifications > Other)
- Check the battery usage of your apps in Settings > Battery > More options (the triple dot) > Battery usage. Remember that battery life may be reduced with usage of certain features (location, Bluetooth, etc.) and apps (gaming, video, etc.).
- Turn on battery optimizations for all apps, (Under Settings > Apps & notifications > Advanced > Special app access > Battery optimization, and tap each app to change it to *Optimize*), and also enable Adaptive Battery, which limits rarely used apps (Under Settings > Battery > Adaptive Battery).
- Force stop or uninstall any new apps and monitor battery life. (You can do this by going into Settings > search for *appName* & select *appName*)
- Temporarily disable all installed apps with Safe Mode, to see if an existing/updated app is the problem. (Enter Safe Mode by pressing & holding the power button, and then pressing and holding *Restart*, and finally tapping OK. To exit Safe Mode, restart your phone as normal. You may have to sign into some apps again.) If your battery life improves, use the aforementioned methods on older apps.

Investigate battery intensive features.

Some functions on your phone may use more power than you expect, especially in different scenarios. Take a look at this list for **a few** possibilities:

- **Bluetooth** is notorious for its high-energy usage, especially when actively transferring data. Turn it off if it's not needed, and if you do, consider looking for Bluetooth Low Energy devices, which need much less power.
- **Location** also uses quite a bit in order to pinpoint your position. Turn off Wifi/Cellular data/Bluetooth location accuracy (Settings > Security and Location > Location > Advanced > Battery saving > Google

[Skip to main content](#)[Create](#)

stay connected, no matter if you're in the forest or underground. If you don't require a cellular connection (for example, if you have Wifi Calling), put your phone into Airplane mode and re-enable Wifi/Bluetooth if needed.

Contact Google Support.

Google's dedicated Pixel support team may be able to help diagnose and fix your issue. Find them in Settings > Tips & Support, or just ask your Google Assistant "troubleshoot my battery".

IF ALL ELSE FAILS, factory reset your phone.

Sometimes wiping your phone is all that's needed to bring your battery back to life. Google Drive and Google Photos do a decent job with keeping your apps and data (check in Settings > Google > Backup > Back up now **and check** Google Photos > sidebar (the three lines) > Settings > Backup and sync), but ***please personally make sure that everything is backed up to something off your phone.*** To wipe your phone, [follow the steps here](#).

This megathread will be replaced on the 1st of each month at 10:00 UTC. If the month is wrong, [search for the latest one here](#).

To return to the Superthread, [click here](#).

Just got a pixel 10 pro and battery of thing thing is getting NUKED even after totally disabling background usage for like 90 of my apps. Chrome still runs in the background despite me turning it off which eats up a lot of battery.

A fix is needed ASAP, I can't keep running my phone in power saver all day.

**Psylocke01** • 2mo ago

[Skip to main content](#)[+](#) Create**maxamillion17** • 2mo ago

Same on p9 pro

**[deleted]** • 2mo ago

Factory reset, all the recommended settings, Yet in a few hours I'm still losing 50% from a full charge while idling. Something in the Android 16 software is nuking battery life.

**PokeBoy995** • 2mo ago

Pixel 10 Pro user here experiencing extremely poor battery life. I cannot get through a full day without a power bank. I monitored system drain over a 4-hour period since a full charge, and the results are unacceptable:

Highest System Drain Sources: WiFi: 41% Cellular/Mobile Network: 17% CPU / Android System: 11%

This system-level drain is happening even during periods of low usage. This severe drain on a flagship device needs an immediate fix.

Has anyone found a workaround for the excessive WiFi/Cellular drain on the P10P?

**kreteciek** • 2mo ago • Edited 2mo ago

~~I bought my Pixel 9a a week ago and got battery runtime predictions even up to 1d and 10h! Yesterday I did a few updates, including September and November drop. Now I get estimates of no more than 9-12h. Google, fix that soon, that nerf is an embarrassment.~~

Nevermind, turns out there's a November Update bug which cuts "1 day" from the estimate. So the predicted time of your phone dying is correct, jut not the date of it XD. The estimate is correct in settings, though.

**Independent-Film-813** • 3mo ago

I have a Pixel 6a device that I loved and was proud of. It was perfect for me until the latest update. I didn't change my habits, I didn't install any new apps, but the battery now drains within a few hours in a very concerning and disappointing way.

I replaced the battery with a new one, got a refund from Google, and the battery was replaced by an official provider in Israel that supplies original batteries. Yet again, the device shows the same warning about a potentially overheating battery. It says there are 406 charging cycles left, but this number doesn't change after charging.

[Skip to main content](#)

Create

**Ok_Cry7572** • 2mo ago

It's better to not update older phones. Google will reduce ur battery life to make you upgrade

**Independent-Film-813** • 2mo ago

It is a shame, but I can see that newer phones has battery issues as well

**Great-Canary5912** • 3mo ago

Понимаю тебя. Сам столкнулся с такой проблемой. Второй месяц ищу в интернете решение этой проблемы, но всё бесполезно. Заказал себе китайский телефон несколько дней назад.

**ur-moms-chest-hair** • 3mo ago

Pixel 9 Pro

Does anyone else have Google Maps running in the background consyantly after the Maps/AA update yesterday? Oddly enough it's counting towards my SOT

version 25.47.08.832980099 maps version 15.6.654484-release AA

<https://imgur.com/a/CBpAXfD>

**triplejnj** • 3mo ago

I came to the Pixel 10 Pro XL from a Galaxy S23 Ultra. With my S23, I would typically lose about 5% battery overnight. With the Pixel it is about 10%. When I look at battery usage, there are no Apps using battery overnight, and in System, "Mobile Network" seems to be a culprit, showing between 40%-50% in each 2 hour segment. I've gone into Developer Options and disabled "Mobile data always active", but that didn't seem to improve anything. I'm on Verizon and don't have a setting to disable 5G at home to see if that would help. Is there anything that can be done to reduce this overnight drain, aside from turning on Airplane mode?

**Least_Importance1930** • 3mo ago

Yup it's system apps for me. System apps is consuming 70% plus the phone runs hot on the smallest of tasks like phone calls and text messages.

**Great-Canary5912** • 3mo ago

Последние несколько месяцев тут у всех такие же проблемы. Мне жаль... Но решения до сих пор нет

[Skip to main content](#)[Create](#)**Pixel 8 Pro**

Latest November Security Update took a good hit on my battery life P8P. October build was more battery friendly!

**Charl1eBr0wn** • 3mo ago

P8P, same here. After the update "system apps" is draining like crazy. Usually went to bed with 20% left. Now I have to charge it 4h before bedtime to avoid shutdown...

Absolutely unacceptable. Google fucked up.

**LifelsAllBalance** • 3mo ago

Same problem on my Pixel 9 after november update. Reading around on forums, social media and Reddit it is a very common and serious problem.

**Pitiful-Education-13** • 3mo ago

Last update bricked my phone's battery. It drains from 100% extremely quickly, and after it gets to 20% it drops to 0 within seconds. I can watch the number actively go down. I had no battery issues prior to the update. When is the fix coming??

**caterpielvl99** • 3mo ago

System apps taking 71% of battery usage, performance has tanked since update. pixel 8, on android 16. Wish I could roll update back

**rottenrealm** • 3mo ago

yes,9 pro. it feels like the November update replaced the battery with a worse one.

**ChrisR49** • 3mo ago

Is there any way to determine what the "<-> Others" category is when I go and look at Systems Battery Usage? Mine is taking between 60% and 80% on my Pixel 10 Pro, getting absolutely awful battery life.

Would hate to have to deal with support to get a new phone so I'm trying to figure it out on my own but this is getting out of hand.

[Skip to main content](#)[Create](#)

I'm currently using a p7a. Was using it as my secondary phone but has become my primary over the last year or so.

Rubbing Android 16 QPR2 BETA 3.3.

I've had zero issues with the phone since I got it. After I think the beta 2 was released, my battery kills itself when it hits 20%, even with battery saver on. I have not long updated to 3.3, and now it seems to die at 30-40%.

When I say die, I mean the percentage in the battery icon seem to be working as normal, but as soon as it hits between 30-40%, the battery percentage drops.. "36, 30, 28, 25, 20, 13, 10 turn on ultra saver? 9, 6, 3, 1, goodbye" - within a second.

I contacted google support and they said it is a bug and they are aware of it and are fixing it - this was about 2-3 weeks before 3.3 release. Fair play to them tho, they did provide me with the details to send my phone or take it to a store closest to me to get a free battery replacement. I said if it is just a bug, then I'll wait.

Is anyone else having this issue? Is my battery clinging onto life so I should get it repaired, or wait it out a little longer?

TYIA 🤔

cubei 🍰 • 3mo ago

Pixel 8 After the November update the battery drains like crazy. Last night I charged to 100%, airplane mode, unplug, screen down. In the morning (8 hours later) I have 53%. Night before without airplane mode, the same.

cubei 🍰 • 2mo ago

December update fixed the issue.

cubei 🍰 • 2mo ago

I reset the phone and it didn't really help, battery still drains. So you don't have to spend the effort.

Appropriate-Show8753 • 3mo ago

Ok I so I did exactly what u said, charged it to 100 percent and slept with airplane mode on but it only dropped 3% but that's not the case when I use it during the day. Max SOT is like 3 hrs, it's so bad

**newFlguy** • 3mo ago

"System Apps" is responsible for anywhere between 69% and 80% battery drain. How do I determine the specific app from that general category?

**Great-Canary5912** • 3mo ago

Добро пожаловать в наш клуб. Тут такое у всех

**Staff_Fantastic** • 3mo ago

Not only did the last update destroy my battery life. But it also bugged my apps. If I leave an app and go to the home screen to choose another it actually pulls the same app I just left up. I have to do this like 3 times in a row to get it to stop. Do they not uat test this crap?

**Great-Canary5912** • 3mo ago

Им плевать. Я сдал свой пиксель в магазин и жду пока одобрят возврат средств

**fffrrr666** • 3mo ago

Pixel 8

On my Pixel 8, sadly, the 80% Battery Health charge limiter issue was not addressed with the recent System update labeled as November 5, 2025.

But if you want to see the Shield icon appear once again at 80%, here's what to do (this will only work *once* right after this process has been executed:

Toggle off Charging Optimization

Restart

Attach charging cable

Toggle on Charging Optimization

Select Limit to 80%

**hasmukh_lal_ji** • 3mo ago

Pixel 8

This was working for me yesterday. But now its not working :(

[Skip to main content](#)

Create

location with stronger signals on both Wi-Fi and cellular today and the angle of drain was noticeably less steep, in fact it was borderline dramatic. I'd say by eyeballing it and looking at the battery meter it was between 30-50% less drain than I usually see over the same period of time while I was in range. So those things are usually out of our control but if you can at least boost your Wi-Fi signal, it can help a lot.

**newFlguy** • 3mo ago

Pixel 10 Pro. Applied November update and System Apps is responsible for 67% battery usage.

NEVER had this issue with the 9 or earlier.

Has anyone identified a solution?

**PourJarsInReservoirs** • 3mo ago

Pixel 10 Pro

Is it actually labeled "System Apps" in the list? (Same phone, not seeing this issue.) How long ago did you update? Dumb as it sounds rebooting the phone again can sometimes help.

**Great-Canary5912** • 3mo ago

Вам просто повезло. А нам не повезло.

**The_Gamer_dz** • 3mo ago

Pixel 6

After September update the battery is still shit fix it please

**Great-Canary5912** • 3mo ago

Им плевать

**Ok_Cry7572** • 3mo ago

They not fixing anything

**eMiceTic1** • 3mo ago

Same. Pixel 6. Since Sep update.

[Skip to main content](#)[Create](#)**nsx2brz** • 3mo ago • Edited 3mo ago

My battery life was fixed for a week after the bad October update, then it started draining badly again.

I figured out how to stop the drain, maybe, clear Google Play cache/data, reboot. Dont run the Play store and you wont have drain...

Maybe someone else can test this also...

**tryitfailtryitagain** • 3mo ago

I had the same feeling.. after the October update, the battery performed very well for 2 or 3 days, but then it went back to the same behavior. Google apps such as Google Play Services, Google, and the Play Store are using a lot of battery in the background.

I cleared the cache for Google Play Services to test, but when I tried to delete the data, it warned me that all passwords, Wallet data, and backup settings would be removed. I'd prefer not to do that unless it's really effective.

Could you please confirm whether your battery life actually improved after making those changes, or if it stayed the same? I'm currently on the November update.

**nsx2brz** • 3mo ago

Yes, my battery life is much better with my Google Play cache/data cleared. Somehow Google Play gets started again every 4-5 days, and I have to clear it again and reboot. I am on the November update now. I do not stop or uninstall it. Not sure why this works or if something else fixed things.

**lBlaze42** • 3mo ago

Pixel 10 Pro here

Constantly had big drains, coming from mobile network apparently

There 3 adaptive settings :

- Adaptive Battery
- Adaptive Connectivity
- Adaptive Charging

Turning off Adaptive Battery got rid of some battery drain, 100% sure. Something in this option is probably bugged (And it's been a long time, as I turned it off reading a post on Reddit that was written 4 years ago)

Adaptive Connectivity, I have it on for now, I'll see how it goes. But it seems I got rid of the sleep drain in this configuration

Adaptive Charging feels way better than limiting to 80%, it's like you're stuck a 60%, not 80

[Skip to main content](#)[Create](#)**Top 1% Commenter**

Is this really a Pixel 10 pro? Video showing someone turning off "Battery Health Assistance"

https://www.youtube.com/watch?v=cB_J6MxnJZI

**PourJarsInReservoirs** • 3mo ago

Pixel 10 Pro

No such option on mine. US/North America with latest update. Nothing in system apps either.

**MrBanjod2** • 3mo ago**Top 1% Commenter**

Same here. Think the video is probably not a 10 series. Thank you

**snokaathllite7** • 3mo ago

Pixel 8 drains 25% of battery from midnight to 5 am. Being drained by "system apps." I can't even make it through a 10 hour day with minimal use since the updates in October.

**Great-Canary5912** • 3mo ago

Тоже самое

**Loud_Record3568** • 3mo ago

Me neither. Anyone knows where we can find this?

**Ok-Question-4730** • 3mo ago

-30% battery from 00.00 till 09.00 when phone was idle. (from 80% to 51%)

Google pixel 10 pro xl

BD3A.251005.003.W4

00.00-02.00 Cpu 13% Cellular 11% WiFi 2% Screen 2%

02.00-04.00 Cellular 60% Cpu 40%

04.00-06.00 Cellular 62% Wifi 22% Cpu 3%

06.00-08.00 Cellular 53% Wifi 25% Cpu 22%

If to compare with:

[Skip to main content](#)[Create](#)

For the same night

Ok-Question-4730 • 3mo ago

Update.

Yesterday I switched off 5G and Vo5G and left 4G only.

As result -1-2% from 02.00 till 08.30!

Will test today with same setup and with 5G on tomorrow.

Will update results here.

Ok-Question-4730 • 3mo ago • Edited 3mo ago

So 3 days with 4G on, 5G off

Night battery drain 4-7%, 02.00-08.00

Adaptive Battery Adaptive Connectivity Adaptive Charging Wifi on All Applications were updated before sleep All Applications were closed before sleep From today will test with same setup but with 5G turned On.

Battery charged to 80% and phone is disconnected from a charged.

Will updates results soon.

Reirapurin • 3mo ago • Edited 3mo ago

EDIT: I take it back, I went to bed with 50% left, and instead of charging it overnight like I usually do I just left it, even screen down so the always on screen wouldn't be on, and four hours later I wake up and check the clock it's dead.

I've also had issues with my Pixel 7a. I'm not sure about the battery time itself, but I've struggled with the % suddenly plummeting at 20-30% down to shutoff.

I read (in the October thread) someone had cleared the Play services data and phone's been good since I did it on Sunday. (reiterating the passkeys getting cleared too so you'll have to set up things again if you try this).

As far as I'm aware there hasn't been downloaded and installed any new updates (Ref new comments in October thread)

Great-Canary5912 • 3mo ago

Create

2023 года. телефон перестал включаться и хоть как то реагировать на подключение зарядного устройства. Аккумулятор не вздут. Устройство гугл стоимостью 800 долларов проработало месяц кое как и потом умерло. Очень обидно потерять эти деньги. Т.к. гарантия на эти устройства в моей стране не распространяется.

**Jaq_vg10** • 3mo ago

Pixel 7A user here. Ever since a couple of updates a while back, every time my phone reaches 20% the battery starts draining rapidly until it shuts off (phone lasts like 10-15 seconds after it reaches 20% and then it dies). I thought the last update had fixed it cause when it reached 20% again it didn't drain the battery rapidly but then after a couple of charges later it started happening again. I've had the phone for like a year and a half. Never had problems with it until one of the updates made it that way and it hasn't been fixed since then. Hopefully it can get fixed soon enough. It's really annoying.

**tyttuutface** • 3mo ago

Try running it through a couple of full charge/discharge cycles. Charge to 100%, leave it on charge for a couple of hours longer, then discharge until completely empty. This can happen when the SoC calibration is off.

**[deleted]** • 3mo ago**BIAcK_BIAcKiTo** • 3mo ago

Is this truly what Pixel users have to deal with? I just got Pixel 7 and i am considering returning it because of its god awful battery. Capacity is alright, could be worse, it certainly gets used quite quickly but its acceptable.

But man oh man... charging? Yeah i am using Xiaomi charger but dont tell me it takes 3 freaking hours to charge, like be for real...i dont expect 100 in 10 minutes but cmon.

and idle drain is like ... crazy. Travelling home, had like 8 percent, great that will do. I was for a 2 minutes on Google maps and it went quick to 5 percent. Alright sure, i am using it, it drains. Well, i turned everything off - location, brightness, even data.

It ran out before I got to the bus which was 5 minutes away.

I am sorry but what kind phone is like "yeah there are 4 percent of battery left and it will run out in 10-15 minutes even if it is idle with screen turned off" thats unacceptably horrendous battery drain!

And it lies - I turn it on at home and in a minute it says it has 3 percent. I unplug it, IN A SECOND it turns off!! Like tf? Why lie to me?? Just say you have 1 percent, its ok!

**wettix** • 3mo ago

Pixel 8 Pro

[Skip to main content](#)[+ Create](#)**CoffeeAutomatic9992** • 3mo ago

I'll tell you one thing from both a consumer point of view who owns a Pixel 8 and a QA Engineer/Product analyst. FIX YOUR SOFTWARE!

PEOPLE BUY CONSUMER PRODUCTS TO USE, WE CAN TRY ALL THESE (I DID AND I BELIEVE SO MANY DID AS WELL) BUT THE BATTERY LIFE ON PIXEL DEVICES HAVE GONE DOWNHILL FOR A LONG TIME NOW! FIX IT AND GIVE US ATLEAST 6-7 HOURS OF BATTERY LIFE ON OUR PHONES. PLEASE!

**Great-Canary5912** • 3mo ago

Им всем плевать на нас. Изю всех сил стараюсь вернуть свой новый 9pro xl, которым просто невозможно нормально пользоваться в течение дня

**mcmacker4** • 3mo ago

Pixel 8a

My Pixel 8a today has had a total of exactly 1h screen-on time. In 8 hours of almost no use it has gone from 100% to 25%. The app that has consumed the most battery is Reddit with 2% consumed. Most of my battery was consumed by the CPU (1.5 hours of use reported).
How is this possible? Is my battery dead or is this a bad update?

**GetsugaNZ** • 3mo ago

The last 2 updates have had extremely bad idle battery drain, I thought it would be fixed in this latest update, but it's still the same. On the P8P it's quite bad, the battery usage section just shows system apps using 90% of battery and the CPU in the background using the most battery. I think this is supposed to be fixed in the QPR beta versions, but not yet for normal people, hopefully it's in the November update not too long from now because the idle battery drain is very annoying.

**GetsugaNZ** • 3mo ago

I think the issue is somewhat fixed for me with the November feature update. The phone is now not using an absurd amount of battery overnight or during idle.

**Great-Canary5912** • 3mo ago

Google давала хоть какую то информацию по проблеме после обновления на A16? Прошло уже несколько месяцев, когда телефоном просто невозможно пользоваться. За это время он существенно испортил батарею за счёт зарядок по два раза в день. Могли бы дать возможность вернуться на андроид 15, если их андроид 16 так плох и они не могут ничего сделать кучу времени.

[Skip to main content](#)[+ Create](#)**Expensive-Yoghurt574** • 3mo ago

The battery life on my Pixel 10 Pro has been disappointing. The same was true for my Pixel 8 Pro and Pixel 9 Pro. Both the Pixel 8 Pro and Pixel 9 Pro had fast battery degradation. I'm not expecting any better on my Pixel 10 Pro due to the overheating.

**w1zgov** • 3mo ago

Pixel 9 Pro

Pixel 9 pro user. Battery life has significantly tanked since Android 16. I barely get 5 hrs screen time.

**Purple10tacle** • 3mo ago

My battery is completely shot on my Pixel 8 Pro since the Material Expressive update.

AccuBattery shows zero deep sleep since the update and above 4%/h standby drain. Android shows massive CPU and system app drain. Both well above 50% in their respective categories. No way to make it through the day even under extremely light use.

Google is aware of the issue, has reached out but so far has not offered any solution. The recent emergency security/performance fix changed nothing.

**Great-Canary5912** • 3mo ago

Та же самая проблема на моём 9pro xl. Уже месяц пользуюсь старым телефоном т.к. pixel постоянно на зарядке.

Что вы имеете ввиду под тем, что Google знает о проблеме и обратилась к вам?

Я думаю у такой большой корпорации должны быть функции на этой случай. Например позволить пользователям вернуться на A15. Но этого не делают. А эта проблема разряда аккумулятора существует как минимум несколько месяцев

**BatmanVAR** • 3mo ago

I don't have this setting that you list:

"Turn on battery optimizations for all apps, (Under Settings > Apps & notifications > Advanced > Special app access > Battery optimization, and tap each app to change it to Optimize)"

Is this outdated information?

Create

claims it will charge it to 100% every one to two weeks, but mine hasn't done so since the the 27th of august, with daily charge cycles to 80% since then. And I know this because for some reason home-assistant records your phones battery levels and lets you display them in a graph. Of course because of this my phone still thinks it's at 100% battery capacity after 57 charge cycles, which I can't imagine is actually the case.

**PourJarsInReservoirs** • 3mo ago

Pixel 10 Pro

Since owning the phone in early September it hasn't on mine either. Battery is satisfactory and it claims still 100% health but it is weird.

**MirrorFox** • 3mo ago**Hostillian** • 3mo ago • Edited 3mo ago**Finsceal** • 3mo ago

Battery life remains garbage after the latest update on a 1 year old P8P. I've never had to babysit a phone's battery as much as this, never buying a pixel again.

**Great-Canary5912** • 3mo ago

То же самое. Я уже месяц мучаюсь с этим аккумулятором. Вчера написал обращение на возврат телефона. Уж лучше ходить со старым телефоном, который держит весь день, чем с новым пикселем, который разряжается даже просто лёжа в кармане

**Reeemaster702** • 3mo ago

iOS has worse problems right now you might want to reconsider lol
