De-Google my Pixel (Without Graphene)

Hello [r/GooglePixel](#)! I am considering upgrading my device to a Pixel 9, but I am not a big Google user. I do not mind some tools, like Play Services, Google Messages, YouTube, and Gmail Client on the device, but I don't find use in Gemini, Photos, Chrome, and Google Password Manager (all as examples). How far can I de-Google a Pixel device without installing something like Graphene and Lineage?

Overcomplicating it, just disable and don't use the apps and install the alternatives you want. If you want to use assistant over Gemini you'll get an annoying popup but otherwise assistant can just be disabled altogether as well.

I've never heard of anyone discuss a popup before when choosing another assistant before, what does it look like (if you can show me). Considering that a lot of the phone's features rely on Gemini, how much productivity is impacted for disabling Gemini?

You get a 'try Gemini' card when you open Google assistant and it comes back even if you say no. It doesn't get in the way it's just annoying

Create

use it. I

Disable apps, or you can use universal android debloater.

GrapheneOS and LineageOS serve different purposes that are mostly unrelated, and for specific reasons.
