Deeply impressed with the latest Pixel Drop

Installed the system update pushed to my Pixel 7 Pro last night, and I'm more impressed with the look and feel of my phone now than any other I've ever owned, regardless of brand, model, OS, or version.

Simply magnificent work, thank you Google!!!

Pixel 10 Pro XL 

Yeah the animations are not just nice looking (physics-based) but also look VERY smooth on my P7P. To the point that it feels like it was 30-40fps and now it's solid 60. Maybe they employed the same trick as Apple where they draw motion-blurred frames for animations, so they are perceived as smoother.

By the way, the first 5-10 minutes after the update were horrific - even after the "optimizing your device" notification disappeared my phone was extremely laggy, even after a reboot, but after a while lags disappeared

  96   Reply 

 **wildskipper** • 5mo ago

It's funny how people have different perceptions. I haven't noticed any new animations or differences to existing ones (on P7).

Pixel 6

There are new noises? I haven't heard any.

**Ajsat3801** • 5mo ago

Pixel 8

I hear a small chime when I put the phone on charge... Otherwise idk

**MaximusRubz** • 5mo ago

My phone is forever in DND, so ditto on not hearing the new sounds.

I'll check it out though

**mclen** • 5mo ago

Same. Back in my day we'd have ringtones and ring back tones. Now if this thing makes noise I assume it's the end of the world.

Pixel 1

New charging sounds and new keyboard sounds (and maybe new lock/unlock sounds? Not entirely sure). The keyboard sounds especially sound so much better.

**RoadHazard** • 5mo ago

Pixel 6

I have heard the new lock/unlock sound. Not really a fan, too clicky. Preferred the old one.

My keyboard has been muted for years, haptic feedback is enough.

**Beremus** • 5mo ago

Yea, it great! I did the animation timing adjustment to 0.5x and god it flies.

**zudnic** • 5mo ago

Pixel 10 Pro XL

Great advice! Significant improvement.

[Skip to main content](#)[+ Create](#)**kryyova** • 5mo ago

search for "animation" in Settings > System > Developer options

**marc923** • 5mo ago

Sorry if this is obvious, but is it the Window Animation Scale, Transition Animation Scale, or Animator Duration Scale?

**flying_ina_metaltube** • 5mo ago

Pixel 9 Pro XL

All.

**IndefiniteBen** • 5mo ago • Edited 5mo ago

Pixel 5

Personally I've found changing only "duration scale" is sufficient in some cases. AFAIK this deals with all animations not covered by the other two.

Transition animation scale is basically only changing the animation of app switching, Window animation scale deals with things like pop-up menus in apps.

IMO the app switching animation at 1x is fast enough considering the speed I perform the app switching gesture.

At the end of the day, try each option and see what feels natural to you. I don't mind menus popping up at 1x because it's faster than my fingers and not something I am seeing repeatedly.

Whereas things like opening the app drawer and going to the home screen should be as fast as possible, which are covered by the animation duration scale setting.

I did the opposite, set it to 1.5x.

1 more reply

**CarlFriedrichGauss** • 5mo ago

Pixel 8a

I turn off animations using Accessibility > Color and Motion > > Remove animations and it's even faster. But seems to be unpopular. Everyone seems to love animations and I just don't. They're ok on Android but on iOS animations legitimately make me dizzy.

**mynameisrivers** • 5mo ago

Can you explain what that does?

**Beremus** • 5mo ago

Snappier animations.

cerealsnax • 5mo ago

How do I get my icon groups on my home screen to be bigger? They are so small now I can barely see what's in them now. I really don't like how everything is tinier. Is there some setting I am missing?

Exfiltrator • 5mo ago

Pixel 8 Pro 🏆 Top 1% Commenter

Go to Wallpapers & Style. Make sure Home Screen is selected and then scroll down and use Layout. You probably want to switch from small to medium. Be aware that your entire layout will be rearranged.

cerealsnax • 5mo ago

Thank you! That must have been reverted or something for me. Much better.

1 more reply

Tushe • 5mo ago • Edited 5mo ago

The performance boost on pixel tablet is stunning. much faster in all aspects from booting over menu to app usage. really impressive

**Robert360** • 5mo ago

What are your thoughts on the pixel tablet man? I got one for my mom and she uses it everyday but I never got a chance to play with it. I'm thinking of switching my iPad mini for one but I also feel that's me just being a spoiled adult hahaha

**Fade_ssud11** • 5mo ago

Pixel 9 Pro XL

Its an average tablet, been using it for media consumption for last couple years. Very smooth for standard tasks. It would be better if the screen was OLED. The speaker dock is handy for watching YouTube during breakfast. Also a decent Google home hub alternative.

I am not sure if it provides better update than iPads tho, iOS UX is miles better for tablets.

**[deleted]** • 5mo ago • Edited 5mo ago

what the other user wrote here basically. my ipad air 2 broke after years of usage finally and i was not willing to repair it. since i moved my smartphone from apple to android i wanted a solid android tablet for every day tasks like messages, social media, listen to music and the other stuff like online banking, shopping etc. the tablet does all the jobs perfectly with fast performance. i use it also to make video calls and stream to my google tv or use it as remote control. it can be used as hub for google home if you are into smarthome building. its stil getting updated when the pixel phones are and i guess it will see android 17. i cant comment on power user applications though as i dont play games with it at all or do any big graphics design or anything else that would use lots hardware power as i would never make such on a small display anyways.

its a very good tablet for daily life tasks, i am happy with it and have no thoughts to replace it or wanting something else at any time. its like for me inhavve no reason to watch the market to not miss something better or so 😊

**aimglitchz** • 5mo ago

Can someone explain what noticeable changes? The battery icon is different, there's more rows of apps on home screen. Buttons in menu when swipe down is new more rounded corner. But what else?

How do I resize the quick settings? Don't see it

**YouthOtherwise6936** • 5mo ago

Click the edit button, then hold the tile and you can drag it big or small. Love this

**im_not_here_** • 5mo ago

Pixel 9 Pro

If you hold it, that just picks it up to move it.

You press the tile you want to change, it brings up the handle to resize, then it is easy to resize using that.

Truly Madly Deeply

[+ 1 more reply](#)**OptimisticCheese** • 5mo ago

Pixel 7 Pro

The system UIs are great, but the Google apps themselves need some work. Most of them just change some fonts or added some colored containers in their layout, without the new bouncy animations seen in Material Expressive's new guidelines.

[+ 2 more replies](#)**ahennersUK** • 5mo ago

Can we answer calls with swipe up again?

[Skip to main content](#)[Create](#)

swiped up a couple days ago and it still answered even though the UI didn't show the swipe- which is what caught my attention.

**iamapizza** • 5mo ago

Feels like a breath of fresh air. I'm really impressed by the new terminal too, though not sure when we're getting desktop mode

**crazy-eb** • 5mo ago

Terminal? Where?

**krokodil2000** • 5mo ago

Pixel 7

Anyone having issues with the phone charging the battery up to 100% even though the limit of 80% is enabled? Happened to me twice in a row after I have installed the latest update.

**vicious_abstraction** • 5mo ago

Pixel Watch 3 45mm

It's going to charge to 100% occasionally. Might just be part of the calibration process.

**JiForce** • 5mo ago

Pixel 8 Pro

I've noticed it'll do the 100% calibration charge after updates. Gotta leave it plugged in at 100% for a while and the shield on the battery will show up again. For me it was about 20 minutes. Some people on the Google forums say it took longer like an hour or overnight for them.

**Fade_ssud11** • 5mo ago

Pixel 9 Pro XL

You need to keep the phone plugged in even after it hits 100%, at some point you will see a shield icon popping up beside the battery icon. That's when the smart charging will kick in again.

1 more reply

**polyblackcat** • 5mo ago

Pixel 9 Pro XL

I've noticed one thing, I've got several launcher screens set up and sometimes when I swipe up to go to the main screen it just jumps there instead of showing the proper animation. Stands out to me because the rest of the UI is so smooth and nice and I love all of it

[Skip to main content](#)

**Solaire_praise_sun** • 5mo ago

Have they brought back the ability to adjust how strong the haptics are?

**neil_lfc** • 5mo ago

It feels my Pixel 6 has gotten a lot more smooth than ever before.
Still need to upgrade to Pixel 10 soon because of the battery and storage.

[+ 3 more replies](#)**glastomongrel** • 5mo ago

Im just struggling to get used to swiping horizontally instead of vertically to answer the phone lol

**Honest-Objective-83** • 5mo ago

Has anyone seen better battery retention ?

**Psychology_Slow** • 5mo ago

Pixel 8 Pro

Same here! The haptics feels great and snappy! The notification center looks clean, polish then the precious version. I just wished the apps were better optimized but hey I'll take it for now!

I just hope Google is working on something soon because it's such a waste! There's a lot of potential here

..

**cdegallo** • 5mo ago

It's a big mixed bag for me. I hate everything about the status bar changes except the battery icon. It looks cartoonish and ugly.

I don't particularly like how much dynamic things 'bounce' in the new UI. Like dismissing a notification and the stack of notifications below move upward but bounce like there's momentum.

I do like that the settings icons are colored again and the settings sections are differentiated with more contrast.

[Skip to main content](#)[Create](#)

I do like that the status bar icons (and maybe other things as well) are content contact-aware and change color "theme" (change to dark if there is light content or light if there is dark content).

I do not like that you still can't force the gesture bar to not show. It's such a superfluous and pointless thing to show all the time.

[1 more reply](#)

**ishamm** • 5mo ago

Pixel 10 Pro

These kind of posts HAVE to be AI, right?

The update is pretty minimal, a few new UI elements for the same of change, and not much else...

Yet people act as if it's absolutely game changing technology 😊

**mynameisatari** • 5mo ago

Pixel 8 Pro

It's not a game changer tech. Yet there are massive changes to UI, if someone cares about that, they feel substantial.

[2 more replies](#)

**Fade_ssud11** • 5mo ago

Pixel 9 Pro XL

Yep it's overall a very solid update.

**RustyShackelford__** • 5mo ago**Manhattan18011** • 5mo ago

Pixel 9 Pro XL

Absolutely agree. This update has been my favorite of any on any Pixel device.

**optimuswalken** • 5mo ago

I'm not gonna lie.. aesthetically I hate it.

Cell/WiFi/battery icons are ugly and straight out of iOS. They look outdated and they lost the sleek look. They don't jive with app notifications either. Looks like two different OSes.

Resizing quick settings is cool in concept but they look ugly no matter if they're expanded or collapsed. The mix of circles/ovals and rounded squares/rectangles is awkward and it feels like the icons themselves

[Skip to main content](#)[Create](#)

trying to rock a monochrome aesthetic.

I know I'll find some things I like about the update functionally but aesthetically my phone got a whole lot uglier overnight.

mucinexmonster • 5mo ago

It looks shitty and not for people with three button navigation. Lots of buttons are larger (good), but now are in all the wrong spaces. Like the alarm is just a big stop button. Okay?

Suvaius • 5mo ago

Pixel 8

However, dont forget they're planning to disable unsigned sideloaded apps.

exu1981 • 5mo ago

Pixel 6 Pro

It's not that serious. Just ADB sideload.

would like to switch to the Pixel 7 Pro, exactly the one you are talking about. It encourages me to say this model since it is very cheap in my country, I will give it to this iPhone as part of the payment so it will be even cheaper. What do they say? Should I switch to the Pixel 7 Pro? Lately they say that Android updates are getting better on the Pixels and the truth is that it is very close to a good experience as well as on the iPhone.

**BubblyYak8315** • 5mo ago

Please do not buy an old crappy pixel. Save up and get something newer like a 9 Pro

**Progressive_Trance** • 5mo ago

Pixel 2 4 Pixel 7 Pro

I'll take umbrage to that. Just three years ago, this was the best in class pixel. It's camera and telephoto lens are still top notch and in many respects better than some of the processing on the 9 pro XL. It's still a 1440 120 Hz refresh rate display. Very snappy. The 7 pro will be viable for many more years.

If you did a side by side and asked the average person, they wouldn't see a noticeable improvement in their user case with the 10 pro XL vs the 7 pro. The days of significant improvements in smartphone tech are behind us

**MiserableAttention38** • 5mo ago

Pixel 9 Pro

I upgraded from the 7 pro to 9 pro and was underwhelmed. Seeing these reports I am honestly wondering what the 7 pro with this software would be like.

7 pro was slim with beautiful hardware, the 9 pro screen felt like a cost reduction move rather than an upgrade. There was little in the upgrade for me apart from the new form factor. Maybe the fingerprint unlock was very slightly better.

So if you save cash, 7 pro is FAR from crappy

**BubblyYak8315** • 5mo ago • Edited 5mo ago

Nope. The 7 pro battery life sucks and the screen is worse. It overheats far more due to lack of a vapor chamber and less efficient SOC. The form factor is also unnecessarily bulky. Lastly it has worse reception due to that model Samsung modem.

**Progressive_Trance** • 5mo ago

Pixel 2 4 Pixel 7 Pro

I consistently get 6 hours SOT and that's after 3 years of heavy use. Not sure what you were doing with your phone.

**BubblyYak8315** • 5mo ago

[Skip to main content](#)

Create

**Progressive_Trance** • 5mo ago

Pixel 2 4 Pixel 7 Pro

This is mixed use. All wifi is 7 and 5G UW is 5. I rarely use my phone for that long, however. Temperature is a cool 90 degrees and not within the red area.

Trust me mate, I know what overheating looks like. I had an HTC rebound when it launched. That was a fun phone to use but that was actual bad battery life. Went down to 50 within an hour of listening to music and playing temple run and one time I was taking an exam in college and the phone was burning in my pocket to where it was probably dangerously high temp and then it died.

The pixel 7 pro might get warm on Android updates or when things are updating in the play store, but never to a concerning degree

**MiserableAttention38** • 5mo ago

Pixel 9 Pro

Having had both phones for a good year plus I would disagree. Both modems are far from perfect. Battery life could be better. Maybe an older phone would have a slightly more worn battery. The screen resolution is higher for the 7 pro and the brightness difference is not that noticeable IMO because I'm not trying to use my phone in bright sunlight. I've not noticed either phone overheating, if you want to game etc then get a gaming phone?

IMO modem differences, screen differences, battery differences are all marketing led and not real world night and day improvements.

2 more replies

**Tushe** • 5mo ago

What I like the most so far is that they seem to have changed the fingerprint sensor behavior!

Some days ago I put on a new screen protector (those privacy ones that get dark when seen from the side) and I had been struggling with the sensor as it usually took me a few tries to unlock stuff. Now it feels like the sensor scans twice and gets it right every time! 🙌🔥

**AdmiralArchArch** • 5mo ago

How do you know if you have this?

**Pr0t-** • 5mo ago

Very obvious as everything is different

[Skip to main content](#)[Create](#)

implemented, ever since I started using Pixel (with my first introduction to Pixel, with Pixel 6 Pro)

But I would be even as bold say even Android as a whole (I've been an Android user since 2012)

My current Pixel 9 Pro honestly feels like a new brand phone device since installing the update is running extremely well.

Well done Google 🍷🍷

[deleted] • 5mo ago

IridescentKoala • 5mo ago

Seriously? They made some more minor design changes and added a few half finished features.

Ink_Bella 🍰 • 5mo ago

I have the update but nothing changed visually for me.

bestnameever • 5mo ago

There are no new monthly or weekly features. System app updates are yearly only, like it's the 90s. But at least that allowed them to have a long feature list for the keynote (now they don't even release the promised features lmao).

Really? Then why are features added throughout the year, like the journal app and spatial video being released in December? Or....podcasts app getting transcripts in March? Or....airplay hotel support added in January? Or....cross tracking notifications added in May? Or...Screen recording with Siri in May? Or new controls in the tv App in July?

How is this possible? How can these updates and new features possibly happen throughout the year when you say they are only done yearly????

Oh, I know, you don't know what you are talking about.

The new quick settings are visually dissonant and have very poor colour contrast (e.g. sound, brightness icons). The weird liquid ass borders look cheap. The spacing and padding is super inconsistent as if an intern designed it. The weird 3 icons on the right side look like someone added them last minute and they were jammed in the tiny vertical space. The top area (network, power, status bar...) looks like stuff was randomly placed, there is 0 alignment.

Oh man you are so funny because you don't realize how ignorant you are.

Create

Then why does Google keep copying it?

nikm80 • 5mo ago

Agree, even though WiFi is not as strong.
