Discussion: Serious Quality Control concerns with Pixel 10 Pro hardware batches in India? (Motherboard/Network Failures)

I've noticed a worrying trend regarding the Pixel 10 Pro launches in the Indian market, specifically concerning motherboard failures and network connectivity.

I recently went through two separate units (original and an official replacement) and both suffered from identical hardware-level issues:

Unit 1: Total motherboard failure. No Wi-Fi, No SIM detection. Unit 2 (Replacement): Mobile network/SIM failure (though Wi-Fi worked).

This doesn't seem like a one-off "bad luck" scenario. When a replacement unit from a different batch exhibits the exact same hardware defect as the original, it points toward a potential Quality Control (QC) or regional hardware batch issue that the community should be aware of.

Points for Discussion: Is anyone else in the region seeing "No Service" or SIM detection issues on the 10 Pro? Is Google's replacement pipeline in India simply recirculating units with known motherboard faults?

For a flagship at this price point, how is the failure rate for "essential" functions (cellular connectivity) this high?

I'm curious if this is a localized issue with the India SKUs or if this is something the wider Android community has started seeing with the new Tensor/modem integration.

Why this works for [r/GooglePixel](#): No "I": We shifted the focus from "I am angry" to "There is a trend/discussion." Industry Focus: You are asking about "Regional SKUs" and "QC trends," which is what that sub likes to talk about.

The "News" Angle: It looks like you are investigating a potential scandal rather than just asking for help.

If you're gonna use an LLM, at least remove the parts after the desired output:

Man we're so fucked. People have to use AI to write basic post like this.

Quality will naturally take a downturn when manufacturing moves out of China.

bhavasarhemang [OP](#) • 10d ago

But with the premium phones?

Then don't charge this much..

Why not? You guys keep buying them at this price. They had their best year ever this year and that's with like 47 active recalls going on due to hardware defects and cheap crappy components in their phones. They're gonna keep manufacturing them cheaper and selling them for more money until they figure out how much the market is willing to endure.

See I am currently using PIXEL 6A.. and it's having its AGE now... So I have to find some phone... And as a Pixel lover I thought this is the best option for me.

I still say, I love PIXEL PHONE but am not happy with the current situation. I don't know how I will get help but at the same time I want to be a critic as well about the device manufacturing issues.

bhavasarhemang [OP](#) • 10d ago

They agreed that there is a fault in the device not that I have to fight for the replacement unit. F1 team confirm.

It's a major concern for me as I have invested 1L Indian rupees to a device which is not working from day one. 😞

I still regret that day when I decided to switch from Pixel 6A to Pixel 10 Pro. 😞

Jolarpettai • 10d ago

1L for a phone?

bhavasarhemang OP • 10d ago

Yes. /GooglePixel charge 1L rupees for #Pixel10Pro after discount other wise price is 1.09L

mattig03 • 10d ago

If it didn't work from day 1, why wouldn't you just return it?

bhavasarhemang OP • 10d ago

Email chain is going on.

And I thought it was a SIM issue and I reissue the new SIM just for the satisfaction of thinking that it might be its SIM issue.

But it is not, as the same SIM works fine on my older phone Pixel6A

I have an EU unit and have had it replaced because the bluetooth was iffy (I think?). My Pixel Watch was consistently unpairing, persisting through complete factory resets of both devices.
