Follow-up to Google Pixel 10 Pro unable to add CC to wallet (buyers beware)

This is a follow-up to [Tap to pay not working on Pixel 10 Pro](#).

The tl;dr on the previous post is that I cannot add a credit card in the wallet, not one of the three I tried. All from different, major US banks. The error is always the same, a generic cannot add it at the moment, contact the bank.

After much back and forth with the banks I opened a ticket with Google. Their conclusion was that:

The issue is due to a heightened risk score assigned to the latest model of Pixel devices, which is a key factor in our security protocols. As a result, the system is currently restricting the addition of credit cards on your device as a precautionary measure. Our Device Tokens team is fully aware of this situation and is actively working on improvements to our risk model to address this with a future update.

A follow-up clarifies that:

I sincerely apologize, but I am unable to provide an exact timeline for when a fix will be available in a future update. Our engineering team is continuously working on improvements for Pixel devices, but a specific date is not yet available.

It's really difficult to wrap my mind around the fact that one can pay full retail price for a flagship product on release date and get this level of ass-fuckery. Maybe I am seeing things through some distortion lenses but on a scale of release blunders this tops it.

Kudos to u/Indianb0y017 for coming up with the true explanation within moments of the previous post. I am pretty sure that Google knows about this shit for a while now as well, but the inertia of their security implementation makes a true fix unlikely, or just too far in the future.

EDIT: for fuck's sake, STOP posting comments like oh, my phone worked good. It's not helpful at all that your phone worked and it's not going to magically make mine work. It's not the actual phone, it's the Play Integrity API!

EDIT: and just like that today I was able to add the card to the wallet.

All my cards added back fine. Even a gift card I just received

Interesting, I had no issues adding my Citi, chase, and credit union cards.

**AsLongAsI** • 5mo ago

I have my American express card added. It did have a few tries. But it was added.

**budget-socrates** **OP** • 5mo ago**MTheNomad** • 5mo ago

P2XL, P4XL, P6P, P7P, P10PXL

No issue here adding my CC to wallet

**budget-socrates** **OP** • 5mo ago

I wish I had your blissful experience. From your flair, you're a dedicated Googler. I, too, started with Pixel 2 (still the best experience) and worked my way up. Evangelized, got followers to join the sacred church of Google (praised be thy searches), only to get burned here. I swear, me and Joan of Arc...

**No_Kangaroo_8713** • 5mo ago

My wife and I also had to jump through additional hoops in wallet but all we had to do was call our bank and they approved the cards to be added to Google wallet.

I just assumed it was an added security measure, but it does work or did for us.

I've added all my cards to the pixel 10 Pro no problem very easy

**budget-socrates** **OP** • 5mo ago**cherlampeter** • 5mo ago

Thanks for sharing an update. I recall reading your previous post and I agree that it does suck that you are in that situation. It's wild to think that Google doesn't have enough telemetry data to act on duplicate device fingerprints to know which one is the valid device. Especially considering there's probably some measure of trust/integrity associated to your Google account as well.

I hope things get sorted out!

**budget-socrates** OP • 5mo ago

First helpful comment. Thanks, dude! (or dudette)

**apocalypticboredom** • 5mo ago

Pixel 10

this post just reminded me that I hadn't setup wallet on my P10 yet (I had no idea that you had to re-add cards for new devices) and it just worked flawlessly for me. however, my cards were already saved in my gpay account so maybe that helped? it was approved instantly.

**budget-socrates** OP • 5mo ago

I have all my cards in Google Pay. I can see them and I can use them for online payments. It's adding them to the phone wallet that is not working.

**ZAKtalksTECH** • 5mo ago

Pixel 10 Pro

Canada here. No issues when moving from 9 Pro to 10 Pro. I have 2 debit and 2 credit cards in my wallet, along with loyalty cards and such. I use the tap on my phone all the time. Don't even carry cash, except a \$20 for the occasional time.

I did have to call my bank one time because I had my credit card, in Google wallet, across 3+ devices. I no longer had those physical devices. So the bank did "remove" then from my profile and all was good after.

Could this be a similar issue? Your cards on too many devices?

**budget-socrates** OP • 5mo ago

Hey, coincidence, just visited Ottawa this week. Beautiful city and country, wish I could spend more time there. And no, that's not it.

**ZAKtalksTECH** • 5mo ago

Pixel 10 Pro

I'm glad you enjoyed your time in our nation's capital. Come out west next time and take in Banff, the Rockies and western hospitality 😊

Google's problem. I got annoyed and left it alone. A few days later, I tried to add my debit card again, just to see and it worked with no issues. I think my issue was I had both my old and new phone running at the same time on day 1 so I could get stuff transferred over and maybe it was causing confusion? Or maybe I just got lucky lol idk

**scgf01** • 5mo ago

Pixel 10 Pro XL

It is helpful, because the few with problems make it look like there is a much more widespread issue. It might just be you, it might be a small sub-set of users but I very much doubt this is a widespread problem. So for me, 'I didn't have any problems' helps with perspective.

**Starks** • 5mo ago

Pixel 10 Pro XL

1. Some issuers such as Barclays force you to call.
2. Don't root your phone unless you know how to preserve play integrity.

**byjairothe** • 5mo ago

I live in Brasil and just bought a Pixel 10 in the USA. I was using my Pixel 8 and all my cards were working there just fine. I tried to add my cards at my new phone and none of them worked. And then I thought "what if I delete my cards from my old phone?" before searching for the real problem here. Now, not even my Pixel 8 can add cards (it's already up to date with Android 16).

Someone said that the Revolut card was working, so I created an account there and bang, it really worked. But it's a debit card.... I don't want to use that. I want to use my credit cards like I used to.

Now I'm back to carrying my phisical cards with me until Google decides I can add cards again. :(

**CordcutOrnery** • 5mo ago

P10P, P9P, P9a, P8P, P8a, P7, P6, P4a 📱

also happened to me today setting up my new Google Pixel 10 Pro.

all 3 cards were on my now spare P9P Wallet

added 1st 2 US credit cards ok. 3rd US Citi card no go repeatedly. eventually I even called the bank, 46 minute call with AI & 4 agents 🙄 I will never get back. while on last hold I finally got it added myself via using the Citi mobile app instead of Google Wallet. then it showed up in Wallet.

yea I'm also annoyed with wallet setup. I was gonna pass on the P10P this time but I went thru some T-Mobile workaround hoops & snagged an ~\$800 🎉 promo so here I am.

I have several cards uploaded to my wallet on my 10xl and I had them on the pro before I returned it.

**budget-socrates** **OP** • 5mo ago

Hey, why did you return it and what did you get instead? I am about to return mine for a refund.

**ComicalLaughter** • 5mo ago

I wanted the bigger screen, so went with p10xl.

**Indianb0y017** • 5mo ago

Pixel 8

So to clarify some confusion and misinterpretations in some of the various comments, I wanted to give some clarity to folks who don't know what's happening.

What I did say about play integrity fingerprints still remains true, but banned fingerprints being the cause will have multiple side effects, such as warnings that the device is detected as insecure, rcs not working, custom rom installation detected, etc. However, a banned fingerprint should not be assumed as the sole cause of bank card issues, as some banks are extremely strict and will often refuse to be added to digital wallets.

Typically a banned fingerprint will affect multiple devices with the same fingerprint, so theoretically, multiple pixel 10 users on the same build version would experience the same issues, REGARDLESS of their bootloader is locked or unlocked.

Several months ago, pixel 6 beta users were experiencing failing services that relied on play integrity API, because the fingerprint was flagged in the system. This left lots of Android beta testers with broken services, despite having a locked bootloader.

Do not assume that it's the users fault for having troubles with their devices because play integrity API has shafted legitimate devices with locked bootloader's before, and it's happened again recently.

But also, do not assume that play integrity is the cause of problems, as it could very well be a third party being a PITA.

Typical signs of failing play integrity is sudden loss of features that worked before, such as rcs, contactless payments and mobile banking. A warning in some apps claiming the device is insecure or rooted may also pop up.

To OP: I'm really sorry this hasn't been resolved and you are still having issues. I wish there was more that could be done, but since fingerprints are managed by google, our hands are tied. In the meantime, you can verify your device still passes play integrity using various tools or even in the play store. Make sure rcs works, as that relies on the play integrity. If it does, and you can't add any bank cards, you'll want to talk

[Skip to main content](#)[+ Create](#)**byjairothe** • 5mo ago

I used this app ([Play Integrity API Checker – Apps no Google Play](#)) and it came with all 3 checks green and I still can't add credit cards (except for Revolut card). What should I do?

**Indianb0y017** • 5mo ago

Pixel 8

If you are able to add a card, or you do not get device insecure warnings, then it's not the play integrity causing problems, as it is passing. You will have to contact the respective banks for the cards. Make sure they are supported first. Several months ago, I could not add my mother's citi Advantage card to gwallet, but they added support sometime in February, and it works now.

**byjairothe** • 5mo ago

The thing is, I had all my cards in my Wallet while using my Pixel 8, and I just switched over to the Pixel 10 to face this issue. And I deleted my cards from my Pixel 8 thinking that could be a reason and now I can't cards in neither. :(

**Indianb0y017** • 5mo ago

Pixel 8

Hmmm this seems to be an issue I'm seeing more volume on. Normally you'll have the rare post of people having gwallet issues, but I've seen a lot of posts with gwallet issues on the pixel 10.

Just to be sure, is your pixel 10 on the latest android build, play system update, and all apps are updated, including system services? You'll find that last option in the Google tab in settings. Or you can search in settings too.

**PastyPajamas** • 5mo ago

Pixel 10 Pro Fold, 10 Pro, 9

Hot tip: Chase app allows you to add the cards right from their app to Google Wallet. So even if you can't find your card, you can add it to Wallet

**gasparthehaunter** • 5mo ago

Top 1% Commenter

So glad that Google are fucking themselves with their "security" measures. Play integrity has to die

**canoflargeror6** • 3mo ago

Anyone got a solve on this yet? Im going to lose my rag if I can't get my bank cards added to Google pay!

[Skip to main content](#)

Create

Still unable to add mine. Just FYI

canoflargeror6 • 3mo ago

Genuinely think it seems like a 10 pro issue?

budget-socrates OP • 3mo ago

Their feedback was:

"I sincerely apologize, but I am unable to provide an exact timeline for when a fix will be available in a future update. Our engineering team is continuously working on improvements for Pixel devices, but a specific date is not yet available."

Your guess is as good as mine. I'll add that I revived my old Pixel 8 and I was able to add the cards, no problem.

budget-socrates OP • 3mo ago

I was able to add the (one) card to the wallet today.

canoflargeror6 • 3mo ago

That's great news!! Unfortunately I have tried again and no success

thenags1 • 5mo ago

Zero issues here

budget-socrates OP • 5mo ago

Nope, you actually go through the same vetting process.

Serious-Berry-8067 • 3mo ago

I have a pixel 9 pro that is having the same issue with the wallet. Thanks for letting me know what the real issue is because Google hasn't been forthcoming. They were on the phone at first, but I think one of the updates to a newer Android system probably included the security issues. And it removed all my credit cards and will not let me I put most of them back on. I did manage to get like one or two but still a huge inconvenience! .

[+](#) Create**Judge-Specific** • 28d ago

I still can't get any cards to work on mine

**Judge-Specific** • 28d ago

Contacted the bank I was told I had to visit a branch to get some help. I tried again and boom went right through. Bonkers

**lisReFlecT** • 19d ago

Pixel 2 XL

Op has all your cards started to work? How long did it take? I'm getting the same answer from Google support saying their engineering team is working on a fix

**budget-socrates** OP • 19d ago

They all started to magically work at some point. Without me doing anything special.

**lisReFlecT** • 19d ago

Pixel 2 XL

How long did it take from when you first submitted a ticket?

**budget-socrates** OP • 13d ago

I don't think it had anything to do with the ticket but with some random updates. I really don't know.
