## Google Can do Better

Dear Google,

It is so **disappointing to face geographical discrimination** from such a company as a Pixel fan/user.

Locking basic features like 5G, RCS, VoLTE, WiFi calling and so on just because you are not willing to open a official store here in our country which is offered by all your competitors (Samsung, Apple etc) is unacceptable.

Also it's hard to swallow when Google blame Apple for not being open, last time I checked Apple supported 5G and so on even though they do not have official market in Sri Lanka.

Clearly Google can fix this yet I am pretty sure they will hesitate to do so small market and they do not want?

Google can do better!

Ooh, I learned a new term today! The fact that I can't get fiber in my rural home isn't because it's not cost effective to run fiber to it, it's **geographical discrimination**!

Pixel 10 Pro XL

What an outrage. I'm literally angry with rage. THIS is why I can't identify as Nepalese, because I'm being geographically discriminated against because I was born in and reside in Texas with all-caucasian ancestry. Bullshit, yo..

Pixel 8 Pro 📱

Geographical discrimination because a company hasn't done all the contracts and paperwork to officially support your country lol. Give me a break. "I'm in Antarctica and my phone doesn't work. Racist!!"

...there is devices from these standards.

If Google doesn't officially sell the device in a certain region, they won't provide full support for those devices. This is true for many brands. Heck, there's a lot of Chinese brands that don't work well in CAN/US as they're not sold here and VoLTE/5G support is never guaranteed. Even certain international models of Samsung and Apple devices may not work well.

Hell, OnePlus got into hot water earlier this year because they do sell phones officially in Canada but because they dragged their feet and Rogers use their own profiles and extensions to the standard, VoLTE, 5G and VoWiFi didn't work and caused panic among Canadian OnePlus owners on the Rogers network, that support didn't come until after Rogers already started to shut down their 3G network.

Point is, it's a lot more complex than it seems, if you want to make sure that a device works well in your region, best to stick to devices that are officially sold for that region.

Pixel 9 Pro

If Google don't sell a product in your country, that's the end if it.

I find it hard to accept the excuses you offer though for 5g. Companies that can barely string together any updates for their phones and churn them out so fast it almost feels monthly, support far more without any effort. There are specific systems in place to make 5g easy to universally support where manufacturers have almost no effort needed, Google chooses not to use them.

**deltatux** • 3mo ago • Edited 3mo ago

Carriers should be offering a universal profile for 5G and VoLTE but they don't always. In the Rogers example I gave, they're the largest carrier in Canada. When they started the 3G shutdown, many international models not meant for the CA/US market lost calling support or fell back to 2G in areas that still had 2G GSM since they didn't support the right VoLTE profile that Rogers uses. Rogers also doesn't allow these devices to connect to their 5G network without the proper support.

For years OnePlus customers urged the company to support VoLTE on Rogers as OnePlus does officially sell the device in the country but they kept blaming the network and that it's not something solvable from them, and then all of the sudden around the 3G shutdown date they announce that they would provide a software update with the necessary support for VoLTE and 5G. OnePlus could have solved this well before the shutdown but didn't.

Rogers is not the only carrier that does this, other carriers around the world also do this.

You can call these excuses but this is what happened.. Frankly the only way to guarantee good compatibility is to buy a device meant for your region.

**im\_not\_here\_** • 3mo ago

Pixel 9 Pro

You are making excuses for the 5g coverage.

[Skip to main content](#)[Create](#)

Given the alternative is zero coverage, one that covers most with minor exceptions that Google can still wave away as "not supported country" is just silly to sit there and defend.

If you said there are occasional examples where the network would need to work with Google so it won't work, but for most Google just are lazy and don't do something simple and easy for no good reason, then that would be fair.

**deltatux** • 3mo ago

I didn't say Google is not at fault here but at the same time the issue also lands with carriers using extensions to standards as well. Both Google and the carriers need to work together for this to work and unfortunately this takes time and money for manufacturers.

My argument is that this is not Pixel exclusive issue, you'll find other brands where support is limited or non-existent when that product wasn't meant for a particular market because device manufacturers may not want to invest the time and effort to work with every carrier in every region to account for the different extensions they use and certify the device.

Pixel 9 Pro XL

You're confusing open standards with whatever you mean by "geographical discrimination".

Do you know what goes into releasing a product while meeting international regulations? No, neither do I. The reality is that if it were easy and straightforward Google would've done it

As for "geographical discrimination", can you prove Google is INTENTIONALLY and maliciously withholding services because of where you live? If not, I would calm down the rhetoric.

**CompoteNecessary** • 3mo ago

No matter how much you complain, they won't give a shit cuz they're that big of a company now. Pixel is just a side hustle for them

**cliff39** • 3mo ago

Ah, so you don't understand how anything works and you want to throw the discrimination card out there. You are a shame. Apple works because they have the money to invest AND the demand to control things more than Pixel does.
