Google pixel WAS great

Until these past few updates. I've lost complete acces to wifi, and rely on my (very little) data. When i do have wifi its for a few minutes at MOST. How do I know its not the provider or wifi? My phone is the ONLY device with this issue. I sit next to the fully functional router and I still have tje same issues. Bluetooth is worse. And google isn't even acknowledging the issue. I contacted support twice and got: "it's nothing we can fix, please try *every single solution I've done*"

Im honestly so annoyed at this point. I need wifi for my college schedule but oh well, apparently not..

This sounds similar to my deal, though my connection comes and goes instead of being down permanently.

Mine comes and goes too but at the moment is mostly down

altruisticmisanthrop • 3d ago

Same. We've had this with 4 pixels now. Everything else works on the router. Everyone else's phone works on our router. Love the phone. Hate this issue.

Pixels have had issues with wifi and Bluetooth for at least the last half decade, and it seems to be getting worse, not better.

seren_XD OP • 3d ago

Ive only had these issues since the latest update, before that everything was literally perfect!

nearfielder • 2d ago

Same here. Just became an issue recently.

xgudwilx • 2d ago

I'll tell you what the problem is...

Google Pixel baaaaaaaad! <(>D<)>

Some people have said manually flashing the update otas fixes it for them

Some adb knowledgeable is required

<https://developers.google.com/android/ota>

Android flash tool may be able to do ota updates as well, neither of these should wipe user data it just applies the whole image again the same as a system update

<https://flash.android.com/>
