...

I am done with Google 🙄

I am completely switching the side this year, I am done with Pixel. After being an hardcore fan of the Nexus series and Pixel series for the past 12 years.

I have pixel 7 pro, battery life and thermals are very sad. I was highly waiting for improvement in this department but all I saw from the launch event are AI gimmicks. I really feel pixel phones don't age well. All the on device AI processing will lag within 1-2 year of phone usage.

Now, I am lost which would be my next phone as I hate Samsung UI so S25/ultra is out of equation. I might wait for the iPhone 17 pro and try it out. 🙄

Anyone feels the same?

Pixel 9 Pro XL 📱

Honestly the latest Galaxy phones aren't that bad. Much less bloat than they used to have and you can uninstall or disable most Samsung ones and use the Google versions instead. Performance/battery life/less throttling/less heating/better modem are all worth it in my case. Recommend trying one out and seeing how you feel after a week or two of using it. You can always return it if you don't like it.

**o9115782** OP • 6mo ago

Unfortunately, I don't get the liberty to return the phone if I don't like the phone in my country.

I have tried samsung UI, my friend has a samsung s24 and I really hate their UI. Hell loads of samsung apps which takes so much space on the device.

Good riddance princess. Copy paste this spam post in 10 more threads.

**o9115782 OP** • 6mo ago

If you have any valid points to counter then please share .. rather than being an asshole.

**DesertOvercrowded** • 6mo ago

As a matter of fact I do. Stop begging for attention. Go work and earn.

**o9115782 OP** • 6mo ago

Well if you have a point then mention it..rather than be a internet troll who sleeps in mom's basement..I earn enough to afford the phones which provides value. Also, Don't be a fanboy who likes to defend corporate shit.

**Beneficial_Raise5191** • 6mo ago

I am feeling the same way. I've owned Nexus S, Nexus 4, Nexus 5 and pixel 3a xl. Since the Pixel 6, I've been disappointed with Google due to performance issues and only increase the prices.

Tried Samsung it seems much better, stable and affordable than pixel nowadays, considering to switch s24/25. I remember samsung is a shit long time ago.

**Captmedu74** • 6mo ago

Why don't you get the pixel 10

**o9115782 OP** • 6mo ago

Downgraded cameras, choppy portrait photos, no vapour cooling on the base pixel 10..

**Krimsonmyst** • 6mo ago

I have pixel 7 pro, battery life and thermals are very sad. I was highly waiting for improvement in this department but all I saw from the launch event are AI gimmicks.

The G5 in the P10 line is manufactured on a 3nm process which benchmarks have showed an improvement in performance which should result in better battery life, and the thermal vapor chambers improve the thermal performance significantly.

Talking points sell hardware, not specs. If you want to find out where the major improvements are happening, you need to do some digging. The public presentations were never going to delve into numbers.

**o9115782** • OP • 6mo ago

Well Pixel has only one advantage and that was their cameras..For the past 2-3 years there has been no major improvement in this department. Portrait photos are worse, Camera UI is laggy. The phone heats up if you take a couple of photos outdoors.

I am aware that TSMC is making the G5 processor and I had high hopes from them. Initial feedback on this is not positive as compared to the competition. If google is partnering with TSMC, there should have been major improvements in the processing and GPU. But Google deliberately chose a mediocre level of processing unit and even downgraded the GPU!

If they are charging 1200 dollars for flagship then they should provide equivalent hardware for the price. Also, they are pushing all the AI computation on the device, how will the device age since G5 is not that strong. And they are promising 7 years of support!

I don't think of phones as \$1,000 investments. I can sell my 9 Pro XL for about \$600 locally. Bought a S10e on eBay for \$87. Trade into T-Mobile for \$800 off the 10 Pro base. So overall I'll make money. Lose nothing.

**SteveBored** • 6mo ago

Yeah I should almost break even going from a 9xl to a 10xl.

**Silenthillnight** • 6mo ago

...to mark them and then I mean...

o9115782 • OP • 6mo ago

I hate the closed eco system of apple products but Iphone does age well. I liked the stock android of pixel phones but hardware improvement is worse.

Silenthillnight • 6mo ago

Pixel 10 Pro

I guess with my use cases, the hardware difference really wasn't noticable. But the things that really bothered me were the UX inefficiencies, especially extra taps to do simple things or the randomness in the behavior needed to go back. With the most recent beta releases, it feels like it's been a massive regression in usability (that I'm sure will be cleaned up eventually but this is the worst beta I've experienced).

Also, people typically laud the modem in the iphones but I find my network constantly dropping even when I'm outside in open skies. But that could also be a part of living in the heart of Tokyo (and this is with a Japanese 16 Pro Max so there shouldn't be any band issues) so we'll see if the Pixel 10 experiences the same issues.

I am pixel 7 user. Back in December i had to take uber from home to airport. I had my phone on almost max brightness and was tracking my driver.... The battery went from 100 to 60 in just an hour.

I switched to custom ROM and custom kernel after that and honestly it was life saver. If you want to keep p7 for 1-2 more years i suggest you go custom rom route as well.

If not, i can say that pixel 9a is really good. I have a 9a (company phone, not for personal use) but i use that phone regularly for hotspot, booking taxis, navigating, calling etc and that thing stays very cool offers

Create

will give you significantly better battery and thermals.

I would just keep on using my p7 for 1-2 more years.. don't see much point in upgrading.

Kell_Kinte • 6mo ago

Nothing Phone 3's U.I is pretty close to Pixel's so if you still want a flagship phone then get that. It's \$800 for the 12GB ram 256GB variant and \$900 for the 16GB ram 512GB variant. It has a 6.7 inch display and the Chip is definitely more powerful than the Tensor G4. Although I don't know how it compares to the Tensor G5. Photos probably won't look as nice as Pixel but I still think they look good and at least you're not paying as much as you would for a Pixel 10 Pro XL.

o9115782 **OP** • 6mo ago

Nothing's childish back panel makes it difficult to justify the price they are asking for the phone. It is a good mid range phone brand but I can't trust them with flagship level right at this point.

Sebsyc • 6mo ago

Upgraded last year from the P7P to the P9PXL. Battery life improvement was massive. Upgrading to the Pixel 10 pro should help with your main concern. However, I have to agree that Pixel phones don't age well, both on hardware and software aspects.
