No_Particular7571 Pixel 10 Pro

...

I got the OFFICIAL Camera Update (10.1.076.821848723.18). The Verdict: THE STUTTER IS NOT FIXED.

Hello everyone,

This has been a wild ride. Today, **I finally received the official Google Camera update (v. 10.1.076.821848723.18) directly from the Play Store.**

To give you the full context:

- **Oct 11th:** Google Support first told me the fix was in the (then unreleased) Oct 9th build (**10.1.076.816441313.17**). I told them I'd test it when I received it.
- **Oct 16th:** I experienced that bizarre "[miracle fix](#)" anomaly. I wrote to them again with proof, asking what was going on, and reiterated that I *still* hadn't received the update and that the manual APK *did not* work.
- **Oct 17th:** Support replied, saying they were escalating this new 'miracle fix' info to the engineers.
- **Oct 28th (Yesterday):** After 11 days of silence, I wrote to them again for an update. They replied, stating they were *also* still waiting for a follow-up from the engineers.
- **Oct 29th (Today):** And then, this morning, the update finally, *officially* arrived.

I immediately went to my testing spot, and unfortunately, I have to be the bearer of bad news.

The verdict: The main EIS stutter bug on the telephoto lens is 100% still there. It is NOT fixed.

You can watch the full, new video evidence I just uploaded here: [Youtube](#)

What the Video Proves

The new test footage confirms the 5X Telephoto is still unusable (you can see the comparison with our benchmark, **OpenCamera**).

In addition to the obvious OIS/EIS conflict, I still **hypothesize that the root cause is a software limbo**: the telephoto's stabilization seems permanently stuck somewhere between the 'Standard' and 'Lock' modes. It tries to 'stick' to objects even when it shouldn't, which is what causes the 'jump' or 'stutter' when you pan. My [new video](#) clearly demonstrates the broken toggle.

The (Only) Good News

The *only* positive thing is that the October updates (both this one and the last one) **unlocked the ProRes 50MP feature**. (A heads-up for those who didn't know!) This now enables **100x zoom** in 50MP mode, up from the old 30x limit, and the quality is noticeably better. This is honestly how it should have worked from the start, but it's a nice find.

(P.S. This new "failed fix" *also* doesn't explain the bizarre "miracle fix" I experienced on **October 16th***, which I captured on video here:* [ProShot and PixeCamera](#). That was a separate anomaly that disappeared after a reboot.)

[Skip to main content](#)

Create

[issue for them](#). This is why I need to ask the community for help so we can gather proper statistics.

If you have a Pixel Pro/Pro XL (10, 9, 8, 7, 6) and received the OFFICIAL 10.1.076.816441313.17 or 10.1.076.821848723.18 update:

1. **What phone do you have?**
2. **Did you get the update from the Play Store?**
3. **Is the EIS telephoto stutter fixed for YOU?**

Please let me know in the comments. I will be compiling all of my **7 new logs** from today's failed test, my new video evidence, AND a summary of our community findings into a new, massive report for Google.

We're not giving up. Thanks, everyone. 🍷

Pixel 10 Pro

I hope they pay you for this...

There's no need to work for one of the worlds largest mega corporations for free

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

I just want all of us to have a properly working Pixel. Though yeah, this really should be the job of Google's QA team 🤪

**techraito** • 3mo ago

Pixel 9

Top 1% Commenter

The craziest part is they're being paid and we're not lol.

[Skip to main content](#)[+ Create](#)**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Yeah, they're getting paid for it - and yet the work isn't always done quickly or properly 😬

**techraito** • 3mo ago

Pixel 9

Top 1% Commenter

Quickly I can dismiss. I think all companies have their rules and things take time, especially if you have a lot of legal hoops to jump through before publishing anything. I'm okay with being patient.

Properly I can't excuse Google for all the bugs. Especially if I'm waiting a long time and a new feature is buggy on release lol.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Totally agree with you. Breaking things with every update while leaving long-standing bugs untouched... Though to be fair, that sadly seems to be how most companies operate these days.

**phuey** • 3mo ago

Pixel 9 Pro XL

It's really sad. I know the tech has gotten much better but to this day I think the Pixel 2 has the best looking photos. I use a 9 Pro and I'm disappointed.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Yeah, sometimes I come across video comparisons of the earliest Pixel phones - and it really feels like that was the peak of Google's software quality. Back then, they were doing magic with pretty average camera hardware...

**Serialtoon** • 3mo ago

Pixel Fold

Didn't someone find the issue and solution to the random stuttering within the OS itself and came out it was some old and new code base both fighting for supremacy or some shit. I'll have to look for the article and post it here but that person also did all this leg work. Opened a ticket with google. Had a lot of traction in general. Google did nothing and continues to do nothing meanwhile we all get to experience the same stupid stuttering as before despite the solution being presented. Meh

Stuttering Post:

https://www.reddit.com/r/GooglePixel/comments/1iiblv9/pixel_stutter_issue_fixed_by_a_kernel_developer/

dcdttu • 3mo ago

Pixel 10 Pro

I sent bug reports of my phone's inability to correctly use 5G for 6 months before Google fixed it. Pixel 8 Pro, 5G would not work in most of the cities I visited using T-Mobile, but would work in some.

The warranty replacement they sent me did the exact same thing, so I assume it was the same for all Pixel 8 Pros.

It blew my goddamn mind that it took them 6 months to make that phone work on 5G for me.

ishamm • 3mo ago

Pixel 10 Pro

I got a full refund on my 8 Pro, after doing the same, over 4 RMAs, they eventually admitted it was a flaw they wouldn't be able to fix (acceptable mobile signal).

Got to keep the device, too.

Worst phone I ever owned.

sicklyboy • 3mo ago

Pixel 8 Pro

Worst phone I ever owned.

Which is funny to me because the 8 Pro is at least the best Pixel I've owned, if not the best phone outright. I couldn't get rid of my Pixel 6 fast enough due to the reception issues, the. Pixel 7 was "fine" until its IP rating decided to pack up and leave while I was on vacation, hence the P8P

ishamm • 3mo ago

Pixel 10 Pro

Oh the 6 was awful, but the 8 Pro was abysmal. It couldn't get signal anywhere, constantly needed the airplane mode on-off trick to search for networks, and wouldn't stay connected.

And the battery was arse, because it was always hunting for a network.

Piece of crap.

[Skip to main content](#)[+ Create](#)

say that those sorts of issues are few and far between for me on my P8P and it is more or less as functional and reliable as I would expect it to be, of course with a little room for improvement stuck in there too. Battery life indeed isn't the best but I also spend far too much time on the damn thing so I've gotta take partial blame there 😂

**dcdttu** • 3mo ago

Pixel 10 Pro

Yeah, it was pretty wild to have a flagship device that didn't work on half of T-Mobile's towers until the June update 6 months after I bought the device. They said they could see the bug that was causing 5G to fail, but it still took them 6 months to fix it. Until then I just left my phone on LTE because the only way to get 5G to work was to toggle airplane mode every few minutes, otherwise data would just stop.

No such issues with the Pixel 10 I have now, and I don't think the 9 was affected either.

**chelowski** • 3mo ago

Pixel 8 Pro Pixel 7 Pro

I somehow don't expect Google to fix this anytime soon. That jump behavior of the EIS+OIS in the camera app is a result of their own software implementation, part of the [Fused Video Stabilization](#) algorithm feature they have since the Pixel 2 series. This jumping and stuttery video on the telephoto camera has been like this since they introduced the telephoto lens in the P6P. And to me, it seems like their FVS feature isn't really tuned for the rapid movements and shakiness of a long range telephoto camera.

I hope I'm wrong and it is actually a bug that they can easily fix. But it hasn't been confirmed yet.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

That's possible. Even if it's not a bug but just an algorithm that isn't optimized for telephoto, it could still be redesigned - especially considering that third-party APIs manage to stabilize much better.

But I still lean toward it being a bug. [One user pointed](#) out earlier that the telephoto lens tends to 'stick' to objects during recording, and when the object shifts, it causes those jumps.

And I'm not jerking the camera - I'm panning smoothly. Speed doesn't matter: fast or slow, the issue is the same.

Switching between Standard and LOCK modes also changes nothing, even though LOCK is supposed to crop and stick to the subject. That's why OpenCamera shows much less crop at 5x zoom, which supports my theory - the one I described in the post - about EIS being stuck in some kind of limbo 🤔

**chelowski** • 3mo ago

Pixel 8 Pro Pixel 7 Pro

For me, recording in Lock stabilization mode does change the way it records stationary objects. It doesn't jump as much as the Standard mode but it introduces motion blur and is only visible on the recorded video and not on the Live preview.

[Skip to main content](#)

Create

impossible with the Telephoto lens.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

In my case, the video shows that there's almost no difference between the viewfinder and the recorded footage - specifically when using the telephoto lens. But with the main camera, the difference is noticeable between what you see in the preview and what gets recorded. That's why I included a comparison between both cameras.

Unfortunately, only pro camera apps that rely on Google's API can use the camera properly. As for Instagram - I've never recorded directly from it, so I'm not sure how it behaves. Interesting to hear though 🤔

**bozhodimitrov** • 3mo ago

Pixel 10 Pro

Idk why there is such big hype tbh. For all these years, no one did anything about it and now suddenly someone thinks that they will fix it for all of us...

I would love for this to be the case, and I support the community effort, but I am not counting on it.

Believing too much into something that might never happen is not a good approach. It could lead to so much disappointment after every new update that doesn't 'fix' the stabilization. And what if this is a hardware limitation and not just a bug or unoptimized algorithm?

Idk, from my perspective, we are trying to take a direct approach to influence the Google dev division. I am not sure how successful it will be, but I am sure it will take a lot of energy, time and probably money.

IMHO I think that we should vote with our wallet, this is the only language that big companies and corps understand.

**QuietEmergency473** • 3mo ago

OP, as someone on the inside I can tell you that users like you, persistent with issue reports, will get a fix eventually. The more persistent you get, the higher up the priority stack it goes.

Don't stop what you're doing!

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Thanks a lot for the support! It really means a lot to hear that, and it motivates me to keep pushing for this bug to be fixed!

[Skip to main content](#)[Create](#)

I have been reporting the Google App News feed showing sport spoilers for years, persistently every time I saw a spoilers, but it was never fixed. Where is the proper way to report this?

The old Google Now feed has a button for "No Sport Spoilers", now we have none.

[u/presetio](#) • Promoted

It's time to consider the switch to open-source BI. You won't look back.

[Learn More](#)[preset.io](#)**ammod4life** • 3mo ago

Pixel 9 Pro XL

I just want to say that you are doing amazing job, and I can't believe how lazy Google devs are.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Thanks! Honestly, I still can't understand how such a bug was even allowed to happen in the first place - and then left unfixed for years...

**SquirtBox** • 3mo ago

Because not enough people, or the right people complained enough about it for Google to spend the money to look into it and fix it, as opposed to just hoping it gets fixed with a new phone...eventually.

There is a list of bugs with priorities on a whiteboard somewhere, and this bug didn't reach the top 20, until recently at least.

**Lonewolf2nd** • 3mo ago

It will be right people, I guess. I have basicly issues with almost every app of Google on my pixel 10 pro. I gave feedback for the things through feedback of this phone and play store by giving nice 1 or 2 star reviews with the issues. After every update I do this again. Google was a good software company, now they are a company that can't get their software right.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

In that case, it's already a win for us - this bug has finally climbed up the priority ladder!

[Skip to main content](#)[+ Create](#)

Thanks for work... And your time for this.. sadly google don't have good enginners or idk..

No_Particular7571 OP • 3mo ago

Pixel 10 Pro

Thank you too for the support! I'd like to believe there are still good engineers left who can actually fix this bug...

KingSpicyCoconut • 3mo ago • Edited 3mo ago

You know this is not about the engineers right? Ultimately the engineers would love to spend time on it but you know what that requires? Money. And unfortunately Google doesn't actually sell enough Pixels to spend huge amounts of money on quick fixes. That means it takes ages as the devs have to split their work up amongst security, platform issues etc. Ultimately it's going to hurt user experience and it needs to be fixed. It's just one of those things where they might get it to a 'good enough' state until one day when they revisit the issue with a newer phone. I'd love to see that they can go the lengths to fix it for good, but yeah. Not enough engineers and not enough money

No_Particular7571 OP • 3mo ago

Pixel 10 Pro

Yeah, of course I understand. I only mention the engineers because support keeps referring to them. And I get that Google has other priorities right now - their main focus is AI and data centers.

But if they're serious about winning over users from Apple or other brands, they need to get it together and actually fund their engineers.

Unlike many other companies, Google has a loyal community that's willing to help identify and solve problems. I'm genuinely happy to be part of that community and contribute to improving Pixel devices.

That's why I really hope Google steps up and shows - at least with this issue - that they're capable of fixing long-standing bugs and actually listening to their users.

Just updated apk from play store to 10.1.076.821848723.18 and while filming using standard stabilization with X5 I have weird snapping clearly visible. While using locked stabilization it seems alright. Pixel 9 pro XL. I can send you some videos if you want. You will get more info from them probably than me

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Thanks so much for the detailed report! It'll be really helpful for the bug report I'm preparing. And yes, I'd definitely appreciate the videos too - they'll be super useful 🍷

**cdegallo** • 3mo ago

9 pro xl. I have the .18 update as of today and video stabilization with the telephoto (with EIS enabled) is still awful. I'd say even worse than it used to be, it does a weird inertia/snap rebound behavior if I quickly pan.

Your efforts are appreciated. Stabilization behavior on pixels during video recording has been my biggest gripe with the camera, and for someone like google that revolutionized still camera photography on phones a decade ago, it sucks to be stuck with such shitty video camera behavior.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Thanks a lot for the detailed feedback! Someone else also mentioned this rebound effect - it really feels like the update added more problems than it fixed...

And yeah, I completely agree with you: stabilization is one of my biggest complaints about the Pixel too. I just can't believe that Pixels, which once worked wonders purely through software, are now struggling to perform better even with much more advanced camera hardware. Meanwhile, third-party apps made by enthusiasts manage to work just fine.

**john_weiss** • 3mo ago

Still the MVP, thanks OP.

**No_Particular7571** OP • 3mo ago

Pixel 10 pro, received the new update today via Google play, I confirm that the stutter still exists.

1 more reply

**hectorlf** • 3mo ago

Pixel 10 pro xl, camera version ending in .18

I'm not sure how to trigger the same stutters you see, but I have some funny behavior.

I switch to 5x, then pan kinda quickly to the right and stop still. The camera will "slowly rubber band" to the left for a second or so, while I'm perfectly still. If I pan left, it'll "rubber band" to the right. This is more evident in the preview than in the final video, but still visible. This is with EIS on, no lock mode.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Usually those jumps and jitters show up just by moving the camera sideways or up and down - speed doesn't matter much.

But your case sounds really interesting. Any chance you could share a video showing how it looks when the camera starts to rubber-band?

**occupiedbrain69** • 3mo ago

Thanks OP for your efforts! Does anyone here have contacts in the media? Usually they cover such efforts via blogs and articles sourcing reddit, OP will get the credit which can boost his career too (and just maybe Google will offer OP a reward for fixing this too!) Media coverage helps! Thanks again

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Thanks so much for the kind comment! Media coverage really can help - at the very least, it brings more attention to the issue, and maybe we'll finally get some kind of answer about when to expect a fix.

Haha, and thanks for the career mention - I wouldn't mind that at all 😊

I have version **10.1.076.816441313.17** on GrapheneOS/Pixel 9 Pro XL, I have the same issue. Haven't played much with it though as the video is quite ass anyway.

 [+ 1 more reply](#)**danathome** • 3mo ago

Remember back in the old days when buying something first meant having the privilege of using it first and showing off to all your friends?

Now it seems more like you're the unpaid tester for the company.

However, you paid for the privilege.

 [+ 3 more replies](#)**RiseUpGames** • 3mo ago

Hello, ProShot developer here. Glad EIS is working! Or was it only working just that one time? 🤔 ProShot follows Google's recommendations from their docs, which warn that enabling both OIS and EIS at the same time will cause conflicts. I believe Open Camera follows that guidance as well.

One thing that's different between ProShot and Open Camera however is that ProShot will enable the newer EIS hardware flag `CaptureRequest.CONTROL_VIDEO_STABILIZATION_MODE_PREVIEW_STABILIZATION` (if its available), while Open Camera sticks with the older `CaptureRequest.CONTROL_VIDEO_STABILIZATION_MODE_ON`.

If you want to experiment with a build of ProShot that can set different stabilization flags / combinations of flags, please email me support@riseupgames.com. Hopefully it will help!

 [+ 2 more replies](#)**AceLeader2998** • 3mo ago

Pixel 10PXL

i received the update this morning, I can confirm the bug is still there, when you pan the camera in 5x mode there is this weird stutter at the end, and it's consistent for me. Device: 10 pro XL

[Skip to main content](#)[+ Create](#)**JesusChristV4** • 3mo ago

Pixel 9 Pro XL

Still no 360° sphere photos?

**No_Particular7571** **OP** • 3mo ago

Pixel 10 Pro

Nope, still the same 😞

**JesusChristV4** • 3mo ago

Pixel 9 Pro XL

That's my first pixel bought and I was thinking 360° sphere photos are standard in pixel camera. Before it I had just ported apps of it on my motorolla and xiaomi and these 360° were fantastic feature.

There's even no way of using same ported pixel cameras apps because it's always stopping working for some reason, I've tried few different versions and nope, nothing. Do you have any tricks for it maybe?

**No_Particular7571** **OP** • 3mo ago

Pixel 10 Pro

Seems like 360° was removed relatively recently. At least on my previous Pixel 6a, the feature was still there earlier this year. But on the 10 Pro - it's gone.

I also tried installing third-party Pixel Camera mods, since they often rely on OpenCamera APIs, and I hoped that would help with EIS working properly. But I couldn't get any of them to launch either - and lately my phone even started throwing security warnings.

As for current alternatives for 360° photos - honestly, I have no idea 😞

**JesusChristV4** • 3mo ago

Pixel 9 Pro XL

Dang this sucks, really. I thought having 360° featured natively will work like a charm... Why would they remove such a cool feature? There's no point of deleting features... God damnit

**Typical_Can_2635** • 3mo ago

As of 30 October, 6a still has photo sphere.

**Beware_Of_Humans** • 3mo ago

How do I get this update? Where can I see the version number I have now?

**No_Particular7571** **OP** • 3mo ago

Pixel 10 Pro

This update should normally arrive via the Play Store, since the version is dated October 22. But you can also download and install it manually [from APKMirror](#)

To check your current version, go to Settings → Apps → Pixel Camera → scroll all the way down - the version number will be listed there

**Beware_Of_Humans** • 3mo ago

Installed from your link. Had version 9 camera app before that. Did not fix any stutters on my Pixel 9 Pro XL.

**No_Particular7571** **OP** • 3mo ago

Pixel 10 Pro

Thanks a lot for your feedback and for taking the time to install and test this build!

**Foreign-Attention805** • 3mo ago

Besides this, has no one noticed the low quality of the camera preview on the Pixel 10 Pro XL? The viewfinder looks incredibly low quality, even compared to my mother's Pixel 9. Does this happen to you too?

**No_Particular7571** **OP** • 3mo ago

Pixel 10 Pro

Unfortunately, I don't have anything to compare it to, so I can't really confirm... I can only show what it looks like in the sample video I attached - it includes footage from the viewfinder

**laughters_assassin** • 3mo ago

Thanks for all your effort!!

[Skip to main content](#)[+ Create](#)**MaynardIsLord721** • 3mo ago

The more time I have with this pixel 10. The more I regret it

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

I understand your frustration, but maybe let's give Google a chance to polish the Pixels? Of course, this is something they should have done a long time ago, but now that the community has started making noise about it, maybe things will finally change for the better. Either way, let's keep our heads up 🙌

**G-KaiseR** • 3mo ago

Thanks for your dedication OP. I hope Google listens. Also, when will they improve portrait mode? Is it that hard to implement the use of two sensors at a time to create a real depth of field effect? The portrait mode just sucks. Even a small help from the on board AI would have helped.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

I hope so too! And I agree about portrait mode. But I'm not sure it's really a priority for them right now, considering there's still no portrait mode for the telephoto lens - even though its focal length makes it the most suitable for that. And honestly, it wouldn't even require using a second camera for depth.

**KeythKatz** • 3mo ago

N5| N5X 🍷 |2XL|4XL|6P|F

Again, just disable it and apply stabilization in post through Google Photos, it's no big deal and works much better. Their on-the-fly algorithm just sucks.

**No_Particular7571** OP • 3mo ago

Pixel 10 Pro

Yeah, I get that. But what I really want is for stabilization to work properly during recording in the first place. On top of that, Google Photos stabilization often introduces distortions at the beginning of the video - I think I even showed those in the second-to-last post and the video I attached there. It feels like it's the same underlying algorithm, both in the camera's stabilization API and in Google Photos stabilization.

**baldersz** • 3mo ago

Pixel 10 Pro

Top 1% Commenter

I'm still on 10.0 September 19 update even though I got an update 4 days ago from the play store

[Skip to main content](#)

Create

Pixel 10 Pro

I also had to wait a long time for the update. I don't know if this is the reason, but I switched my phone to a different account, since my main one was created back in 2012 and got stuck in Workspace with no way to leave. Accounts like that can sometimes receive updates and new experimental features much later. It's not a proven direct connection, but in my case that's the pattern I noticed

Fade_ssud11 • 3mo ago

Pixel 9 Pro XL

They should really pay you for all these efforts.

1 more reply

ericsson44 • 3mo ago

Pixel 10 Pro user here, received the update via playstore - The issue is still there. Meanwhile yes, the ProRes Zoom is working even better on the 50mp zoomed shots.

No_Particular7571 OP • 3mo ago

Pixel 10 Pro

Thanks a lot for the feedback! Yeah, ProRes at 50MP is a nice update, but it doesn't take away from the main issue.

Longjumping_Door_147 • 3mo ago

I'm stuck on the previous version and there's no way to update from the playstore but I'll tell you more.

I noticed some strange behavior on the 5x. I deactivated the "eis" stabilization from the settings but to my surprise it doesn't deactivate completely. It's as if after a few seconds of moving left and right with the 5x it activated itself again, I managed to get it back. So even if you deactivate stabilization from the settings, it essentially remains active 🤔

As expected. Google "never" disappoints.

**Honest_Tart1071** • 3mo ago

I know a company like Google should release a device 100% ready for public use. But keep in mind

- reaching out to Google support or reporting the bug 1 time per week is not gonna speed up the process, we are mere consumers and objects for these companies.
- Fixing a bug is NOT fast, there might be a spaghetti code issue that requires weeks of QA, back end, front end, approvals, testing, deployment.

Yeah, I know it sucks for you and we all, but all we can do is wait, your request might be being handled by an intern with his 18961 due tickets on Jira/Git.

**No_Particular7571** **OP** • 3mo ago

Pixel 10 Pro

I'd be totally fine with all of this - if the bug hadn't been dragging on for multiple Pixel generations.

Google markets Pixels as camera phones, especially software-driven ones. And EIS is software stabilization - yet it's been broken for years. That's just not acceptable, with all due respect to the interns, engineers, and everyone else.

I'm willing to wait, but it's frustrating when engineers tell support that a fix has been rolled out and should be tested, support passes that on... and there's no fix, and never was.

It would be much better if Google just gave us an honest estimate of when to expect a real fix.

P8 user here. I have noticed that going from .5x to 2x while in Photo mode, there is a noticeable lag in switching the lenses and it's worse than before. It's like it zooms in with the 0.5x lens until 2x and then after half a second, it jumps to 2X and the preview becomes clearer.

Also in my observation is a lag while switching between 2x to 1x and vice versa. It feels like something holds the system back while switching the zoom level.

Both happen in the Photo mode.

plagued Google Pixels for some time, from what I remember from the 6 Pro. The animation jump between one sensor and the next is the most annoying and visible. The EIS issue has been slightly improved with this latest version of the video, but it persists. You'll need to record a few more in a lower-light environment.

I would get hate for this, but I had a strong hunch that they wouldn't be able to fix it anytime soon. There have been quite a few issues with the Camera app that keep getting carried over year after year.

Camera not being able to focus even after repeated attempts, not switching to telephoto even in broad daylight, video of a static scene randomly going back to its default overexposed state etc keep happening to me every now and then (from 6 pro to 10 pro XL).

They have made their sales, and most people are fine with the camera. Most do not even notice/care about/face these issues.

Pixel 9 Pro here - should I have the x100 zoom? Version number is correct but still showing x30

[2 more replies](#)**Typical_Can_2635** • 3mo ago

What are you even on about? After watching your videos, it's obvious that on 5x you are moving the device on a much wider arc and at a much faster rate than on your "control" video, where the arc is narrower and movement is slower. It's not even close.

**No_Particular7571** **OP** • 3mo ago

Pixel 10 Pro

I don't know how you watched the video. The whole point is that stabilization in Pixel Camera and Open Camera is different. No matter how fast you move the camera or what the arc is, Pixel Camera ALWAYS shows those jumps. Open Camera doesn't replicate that at all, even when you move it much more aggressively. And yes, I try to repeat all movements as consistently as possible, given that I don't have a rig or fixed reference points.

Still, Pixel Camera always applies its own smoothing - it literally has a bigger crop than Open Camera, which can also make it look different.

So I really don't understand what you were trying to say with your comment. This issue is reproducible on all Pixel devices with a telephoto lens, and other users have confirmed it.

Create

ever owned. I will never buy another Google phone ever again.

p9p using version 10.1.076.821848723.18 directly updated from the playstore.

what i noticed when using 5x or greater zoom isn't the EIS issue but the automatic lens switching probably due to the focal length needed for the tele lens to be effective. since the main lens and tele lens are far apart from each other, the transition is janky. this probably is a limitation of the camera bar design.

edit: upon reading about trying the lock mode, i tested and the lens selection becomes persistent when doing 5x or greater when i used lock mode even if the subject is nearer than the minimum focal length of the tele lens. this makes my hypothesis a lot more probable.

New editing features and layout sucks. Even cropping is a chore. Unnecessarily complex controls. Why?!!

Pixel 10 Pro XL

I just "upgraded" from 10 Pro to 10 Pro XL and with the latest OS and Pixel Camera updates, I'm not seeing the EIS issues so far. Will test tonight for real at a concert and report back. My issue was with Video Boost also, as the stutter/shaking was increased in the video boost file.
