Fran-01

...

My Pixel 10 experience after 1 month and 6 days.

Back in November, I went on a trip to the US, mainly to visit family living there... but also for some shopping (lol). Since I had some money saved and my previous device, a Sony Xperia 1 IV, was already out of software support (Sony only offers two major OS updates and three years of security patches) and the battery was showing its age after two years, I started looking for a proper replacement.

I've wanted a Pixel since the Pixel 4 days, but I found the designs unappealing until the Pixel 6. I decided then that I'd get one once I had the money and my current device was on its way out.

I initially wanted a Pixel 9 or 9 Pro, as they aren't far behind the Pixel 10 in terms of specs with the 9 Pro even being slightly better in some aspects (ignoring the 10's price). However, I couldn't find a reliable seller for a brand new unit; I didn't want used, open-box, or refurbished. I could, however, afford a brand-new 256GB Pixel 10 straight from the Google Store, which felt much safer than buying from AliExpress or eBay. I also checked Amazon, but since Google doesn't officially sell Pixels in my country and Amazon doesn't ship phones here, I opted for the 10 after two weeks of searching. I figured, "What could go wrong, right?" Buying directly from Google meant that, worst case scenario, I'd get a faulty unit or the experience wouldn't live up to my expectations. Neither happened, which is why I'm writing this post. My experience with my base indigo blue Pixel 10 has been flawless not perfect, but a solid 9/10.

Pros:

1. Display: My Xperia 1 IV had the perfect display for media, 6.5-inch, 21:9 ratio, 120Hz, and the cherry on top, 4K HDR10 with CineAlta calibration. It was overkill, but for the \$1,499 phone, it should have everything and that phone had everything, it was the best of the best. Switching to the Pixel 10, I'm honestly very happy. The colors are close to the Sony (though Sony is more natural). The lower resolution is only noticeable in videos, and even then, it's not a huge deal, 4K on a 6.5-inch screen is overkill; 2K is the sweet spot. The brightness is excellent, and the Victus 2 protection is top of the line. My only complaint is the lack of customization, besides that, 10/10
2. Cameras: Coming from a photography-focused Xperia, I wondered how the Pixel would compare. It surprised me. While the processing is more aggressive and less natural than Sony's, the Pixel 10 takes some of the best photos I've ever seen on a smartphone. I do wish Google added a deeper manual mode similar to Sony's, but overall, it's a 9/10. The video experience is good, but I feel like it's a downgrade from my Sony, which could record 4K 120fps in a 21:9 aspect ratio through its Cinema Pro app. And how could I forget about the optical zoom between 85mm and 125mm. And no, it wasn't a fixed sensor, it could actually move forward and backward depending on the zoom needed. I miss the professional calibration modes Sony offered as well as the interface which made it feel like a portable camera.
3. Battery: This is where the Sony somewhat lacked a bit. It lasted a full day but once I got home, it was begging for a charger. Two years later, I was charging it twice a day. With the Pixel 10, I have no complaints. Even with 5G, location, high brightness, Bluetooth Spotify, and my Pixel Watch 2 connected, I get home with about 30% left. On "relaxed" days, it lasts well past midnight. I wish it had faster charging (45W would be nice), as it's still stuck at 30W, but it's a solid improvement.
4. Software: Stock Android is excellent. It's smooth, bug-free, and comfortable. The "Pixel Experience" is unmatched, especially since I dislike bloatware like One UI or MIUI. The 7 years of software support is a massive 10/10 for me. Plus, AI features like writing tools and YT summaries work perfectly in my country, even if most of the call features simply don't work.

[Skip to main content](#)[Create](#)

perfect, I just wish that, just like my Sony, it had dual front facing speakers and of course, how could I forget about the 3.5mm jack that's missing in so many devices nowadays. 10/10 in this aspect despite the lack of an audio jack which would've been nice but I don't blame Google for not including one. I guess USB-C to 3.5mm it's the way to go (which isn't bad at all tbh).

6. Connectivity & Build Quality: I was worried about 5G and VoLTE not working in my region, but both work perfectly. As for build quality, it feels even more premium than the Sony. It's a bit heavier but feels better in the hand. It survived two accidental drops (one from a table, one from a drawer) with zero damage. 10/10.

Cons:

1. Pricing The base Pixel 10 should have started at \$799 for 256GB. Instead, it was \$899, which came to \$973 after taxes in Austin, Texas. I couldn't wait for Black Friday because I was leaving the US, so I had no choice but to pay full MSRP.
2. Performance The Tensor G5 isn't as bad as I've seen online, but it's embarrassing that it only performs slightly better than a 3 (nearly 4) year old Snapdragon 8 Gen 1 in some games.

Here are some comparisons I did:

Genshin impact:

Sony:

Graphics: High settings (with medium world detail)

On average, 55-60FPS (on liyue which is the biggest city in game)

Pixel:

Same graphics and scenario, but instead I'm getting around 45fps with the game constantly going below 40.

This is the only game where the Pixel performs worse than the Sony, I assume this is due to optimization and the fact that on the Pixel, Genshin impact uses the OpenGL API.

On the rest of the games I did see an "improvement".

Wreckfest:

Sony:

Graphics: Everything set to high and 2x antialiasing.

Performance: consistent 60FPS with some drops when the track and cars are loading.

Pixel:

The only difference here is that the resolution was set to Ultra (which isn't the highest, that's extreme) and it gives me a consistent 60FPS as well with some drops when the track and cars are loading, but for some reason the FPS don't go past 60 even when the in-game FPS are unlocked. This is most likely a Wreckfest problem or maybe the outdated drivers on the Pixel's GPU are conflicting here.

Red Dead Redemption:

[Skip to main content](#)[Create](#)

I'd like to also add the fact that on an iPhone 14 Plus that a friend of mine owns, this game runs butter smooth.

Rush Rally 3:

Sony:

Graphics: 1033P resolution (highest), everything set to high with some settings maxed out

Consistent 100+ FPS experience.

Pixel:

On the pixel I basically maxed everything except for the trees rendering distance which was set to 60% as it can be quite demanding and the screen resolution was 1080P.

Pretty consistent 120FPS experience, with some maps/tracks running at 140 or more FPS. Just like Wreckfest if I set the FPS to unlocked the screen will still be at 60hz even if I enabled smooth display but the game will internally be running at above 60fps (Rush Rally has an integrated fps counter).

*I didn't compare the Genshin impact performance with the iPhone as that game is very well optimized for iOS. For Android it's optimization is quite mixed.

However, the Tensor G5 handles thermals much better. I can play for 30 to 40 minutes (depending on the game) without the phone slowing down, and the sustained performance is more stable than the 8 Gen 1... But this shouldn't be something to praise the Tensor, in fact, it should be a given for a new "high end" chip like the Tensor's it's supposed to be and the ones it competes with. It's an efficient chip, but for the price, Google really needs to up their game to match the competition in raw power.

However, for daily use it's very good so nothing to add there.

So far and despite it's small flaws, it's an excellent device and it could be the perfect android smartphone if it wasn't because of its price. The gaming aspect is one that while it matters to me it isn't a defining aspect. I don't play with my phone consistently so as long as the games look fine and run at a stable fps I'm ok with it.

That's it from my personal experience with my Pixel 10. I hope whoever reads this, finds it interesting!

Note: This post was grammatically revised by Gemini as my main language isn't English, but the contents are completely human generated.

I had the base 10 and found it rather mediocre. got it for 680 euros 21% vat included and they offered 150 euros bonus for trade in but I returned it after a few days still. was pretty unimpressed with the cameras, especially at night, considering its supposed to be one of the stronger points of the phone

**Fran-01** **OP** • 2mo ago

I agree, night photography isn't the best and yes the cameras could be better mainly the video and overall image resolution specially for the price. For me it's been a pretty good device so far. Should it be better for the 899 google asks? Yes definitely. Is it bad? I don't think so.

The main reason as to why I liked them so much is the processing. Very artificial but gets the job done and compared to the iPhone 17 it isn't far and it's actually better at night than apple's base device.

**horatiobanz** • 2mo ago

Top 1% Commenter

You spent a thousand dollars on a Pixel 10? Like 3 months after it launched?

**Fran-01** **OP** • 2mo ago

Sadly yes lmao. But I had no choice.

The other options were an S25+ and One Plus 13.

I considered both but stock android it's something that I simply love and outside of that, I didn't have the best experience with both brands.

I'm not going to speak much on Samsung as it's been a while since I don't own a Galaxy device but before my Sony (and the reason as to why I bought the Xperia) I owned a One Plus 10 Pro and the experience was simply terrible.

Battery drain was out of control

Constant overheating problems

Laggy and buggy software

Poor connectivity.

The only thing I liked about it was the charging and display, outside of that I got rid of it after like a week.

I did consider the OP13 since One Plus has changed since then but I didn't want to risk anything.

[Skip to main content](#)[Create](#)

As I mentioned on the post I tried to get a Pixel 9/9 pro but couldn't find a reliable provider for it.

So yes I unfortunately overpaid for my Pixel 10.

SevisGovindham • 2mo ago

Still better than me. I overpaid for my car by 10,000 dollars and it stings when I look back sometimes.

Fran-01 **OP** • 2mo ago

Geez... I don't wish that to anyone... Don't even tell me how that happened, I just hope you overpaid a nice and reliable car.

SevisGovindham • 2mo ago

Tesla model 3. Bought at the end of Covid when stock was low. Prices went down just 4 months after I bought.

And it was not that reliable. Recently the bank took away my car as I'm at the edge of bankruptcy. Relying on my friend's car now. Hoping to start a fresh life from March 2026

Fran-01 **OP** • 2mo ago

Oh wow that's terrible... I'm sorry to hear all of that, definitely something I wouldn't wish to even my worst enemy.

You have a good friend if he's letting you use his car.

I hope everything will turn out well for you next year!

SevisGovindham • 2mo ago

Thank you very much. I hope you have a decent time with your pixel 10. I personally feel the phone looks very beautiful compared to iPhone (I'm a pixel 7 user , who just follows this sub)

Fran-01 **OP** • 2mo ago

No need to thank me. You have to be pretty much horse 🐎 to wish someone a bad thing.

I have been in love with pixel design since the Pixel 6, the 7 and 8 still being my favorites by a bit. 9 and 10 simply look gorgeous, very few phones can top

Battery drain was out of control
Constant overheating problems
Laggy and buggy software
Poor connectivity.

So you bought a Pixel? 🤖. That's basically a checklist of known Pixel problems.

 **Fran-01** **OP** • 2mo ago

Lol not at all... You're either a troll or you bought a fake pixel lmao.

Where I live I get full on 5G connectivity, my wifi works very fast, can get up to 600mbps (max speed from my ISP) and as stated in the post, my battery lasts very nicely.

 **horatiobanz** • 2mo ago
 Top 1% Commenter

Must be a lot of people buying fake Pixels direct from Google for the last half decade then. Not gonna argue with you. If I had just spent a thousand dollars on a budget phone I'd ravenously defend it as well probably (due to the serious head wound I must be recovering from).

You're new to Pixels so you must be unaware, but there is a half a decade of posts on here complaining about each and every one of those things that you can search. It's so funny how people who have owned Pixels for a couple weeks are so fervent in their defense while people like me who've owned Google phones for more than a decade are some of their biggest critics. Should be a lesson in there somewhere.

 **Apprehensive-Ad9454** • 2mo ago

and terrible gps drift

 **Fran-01** **OP** • 2mo ago

There's no need to be unnecessarily disrespectful when I simply responded to your comment based on PERSONAL EXPERIENCE. If you had bad experience with pixel for over a decade then that's unfortunate. No one that pays any amount of money for any device should get a poor experience. My Anker power brick cost me about 20 dollars and it's served me pretty well... As it should.

Maybe you're right. I'm unaware and blind of the many issues Pixel phones have or had for the past half a decade, but I don't own a Pixel from half a decade nor owned one and my current Pixel 10, as of now, has given me no major issues. My only

[Skip to main content](#)[Create](#)

Besides it's a pretty good device that should get me through for the next 2 maybe 3 years.

Legitimate_Fig_4096 • 2mo ago

Disrespectful? You called them a troll over mentioning an extremely well known and ongoing issue.

Legitimate_Fig_4096 • 2mo ago

Disrespectful? You called them a troll over mentioning an extremely well known and ongoing issue.

Fran-01 **OP** • 2mo ago

I'll admit it, that was disrespectful from me, and I apologize to them, but I haven't experienced any of the issues that I mentioned I did experience with the OnePlus.

My battery lasts all day, temperatures aren't out of control even while gaming, my 5G connectivity and VoLTE works flawlessly, and I haven't had any lag, glitches or major bugs.

Had I experienced any of these issues and I would've already gotten myself a new phone.

Fran-01 **OP** • 2mo ago

Also as a side note, I tried getting the Pixel 9 through Google officially and they still charge the initial MSRP for it which was definitely a no from me. And they didn't have the 256GB models at the time. I don't know if they have them in stock now.

6LSxCPU9 • 2mo ago

You don't have the lag/not working speaker phone button issue?

Fran-01 **OP** • 2mo ago

Nope. None of those issues at all.

Rambo_IIII • 2mo ago

[Skip to main content](#)

Create

**Fran-01** OP • 2mo ago

I know but I had no choice 🤷.

Google doesn't ship to my country through any platform.

**Rambo_III** • 2mo ago

Oh I thought you said you DID buy it from Google. Well either way, it's a good phone worth the money. I have the same Indigo Pixel 10

**Fran-01** OP • 2mo ago

I bought it from Google inside the USA. Right now I'm outside of the USA which is where I live and I can't ship it from the Google store or even through Amazon. That's what I meant.

And I agree, it's a good phone a bit overpriced, as I mentioned in the post, the 256GB should've been the base model and with a 799MSRP not 899. Despite that I'd say it's a good device without a doubt.

**Rambo_III** • 2mo ago

Yeah I think mine is a 128gb which is a little pathetic but I have never run out of space with Google drive for all photos and videos

**Fran-01** OP • 2mo ago

That's good to know. I personally don't have any Google drive or Google 1 subscription (I'm considering getting one tho) so for me 256GB it's the minimum. 512 would've been the sweet spot but I couldn't afford a 10 Pro.

**Rambo_III** • 2mo ago

I backed up all my digital photos and videos going back to 2003 so they're all on my Google drive and I used to pay like \$20/year but I exceeded the storage so now it's like \$10/month for like 2TB of storage or something nuts

**Fran-01** OP • 2mo ago

Yeah the prices are very affordable that's why I'm considering one for myself as well. Not 2TB like yourself as I do have some portable hard drives for that purpose but 200GB or even 300GB would be pretty nice for me.

I've got the Sony Xperia 1 iii. It's still fine and love it, but ready for a upgrade and Mrs has the pixel 10 currently. Had a pixel 3xl and loved it. But struggling to pull the trigger on a pixel. Just waiting for a good deal. The Sony camreas for me are really hit or miss. Ethier look amazing or meh. Needs a better point and shoot mode. I tired to manual mode, but just not been bothered with it. I love the screen and front face speakers. That camrea notch is off putting to on the pixel. Rather bars any day then a random dot on my screen.

**Fran-01** [OP](#) • 2mo ago

Right now I think they are on some good discounts on the Google store, if you have the possibility of shipping directly from Google to your address/country then go for it!

And yeah Xperias definitely need a better point and shoot mode. I also tried manual hoping it would provide better results but it barely made any difference (for the most part) so either I can't take good photos or it's not much of an improvement.

The rest of my Xperia 1 IV was simply amazing, screen and speakers as you mentioned but also some features that I wish my Pixel had like the SD card slot, 3.5mm jack and the reverse charging.

The notch on my Pixel hasn't been much of a problem for me, I do wish it had either an under display camera which I think once perfected by other brands, will be THE front facing camera system to go or just like Sony 2 bars or preferably only 1 bar where the camera and other sensors are supposed to be.

My 1 IV served me well till the last day I had it but unfortunately the battery just wasn't enough for me anymore otherwise I would've probably kept it for another year despite the lack of OS support. Overall it's still the best phone I've owned.

**Adji619** • 2mo ago

I was looking at getting the new Sony, but prices are crazy. Only use my phone for general use. So don't need a expensive phone. I suppose I would get use to the camrea notch. Mine been amazing too, just finding it hard to find it worth upgrading to currently. My battery is still fine. But do have issues sometimes with the charging port saying it have dirt in and won't charge. That's very frustrating when it did that. Couldn't you just replaced the battery in your Sony?. Pixel is the only phone that I'm interested in currently.

**Fran-01** [OP](#) • 2mo ago

[Skip to main content](#)[+ Create](#)

I never had any issues with a dirty charging port and my charging port was quite dusty, you could probably try cleaning it with some compressed air, a soft brush or toothbrush just make sure these have never been used otherwise small particles of anything but especially humidity can get into it ultimately damaging it. I have cleaned my PC with items like these and had no issues with components like the graphics card or motherboard, there are a few videos on tik tok or YouTube for that matter as well. Ultimately you can try different cables if you haven't or maybe even clean your cable's USB-C port, hopefully this helps you fix it.

And unfortunately no, replacing the battery wasn't an option for me. Where I live Sony doesn't ship/sell officially anymore, they were very popular back in 2013-2018. I think the last phones they ever shipped officially were probably the first 2 Xperia 1 series models. I did try importing one but I couldn't find anyone that was willing to do the fix for me, most tech repair shops wouldn't do it as they couldn't guarantee proper management of the replacement. I'm also not the most handy when it comes to electronics, cleaning my PC, replacing the thermal paste and sometimes cleaning my PS5 it's the best I can do lol.

**afonja** • 2mo ago

Can't wait for your experience feedback after 1 month and 6 days and 9 hours!

**Fran-01** **OP** • 2mo ago

LMAO. Sure I'll personally update you every 9 hours or so about my Pixel 10 experience for sure.

Update. It's been very good thus far 🤪👉.

**afonja** • 2mo ago

Thank you. I bet the next one is going to be 🔥

**Fran-01** **OP** • 2mo ago

Lol It absolutely will be. You won't see it coming !! !! !!

**Adj1619** • 2mo ago

That's a shame. Might be worth trying the battery replacement yourself now you have a new phone then you have a back up phone?. I've cleaned it multiple times with some of these methods doesn't always work. The wire slips out the charger port now too. Had. A mate compress air and use a thin tool to clean it. It's currently OK. But I know I need a new phone some point

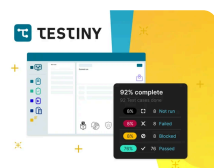

**Fran-01** **OP** • 2mo ago

I bought the Pixel 10 Pro 256GB on Amazon for €899 and I returned and refunded my Pixel 9 Pro for assistance and I got €999 back.

**Darkpurpleskies** • 2mo ago • Edited 2mo ago

Pixel 8 S25+

bro said bug-free. Thanks mr google.

Edit: Ahh the predictable string of downvotes on any critical comment.

**Fran-01** OP • 2mo ago • Edited 2mo ago

Lmao. That's been my experience which as you should probably know, it can differ from user to user... If you had any bugs then I guess sorry since I'm Mr Google? But so far the bug free experience has been my case, haven't had any major bugs or glitches or anything like that.

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

I guess for how limited PixelUI is, it still isn't as polished as many make it seem. Things like weather randomly disappearing in at a glance, the device switcher in the expanded volume panel glitching when animating open, the apply button hanging when changing color themes and the Files app hanging when installing an APK (the app does install).

**Fran-01** OP • 2mo ago

I never experienced any of the things you mention. I unfortunately can't prove it to you as I don't have the means, but if I could I would.

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

That's fair, you can see the volume panel one by opening the device switcher in the expanded volume panel. The others appear randomly like the weather or may have been fixed recently. [heres a vid](#)

**Fran-01** OP • 2mo ago

The weather info disappears if I turn off location which I assume is just normal behaviour. This has a workaround if you use a 3rd party app like today weather which uses wifi for the weather info (I recommend it if you want a simple and nice weather app).

[Skip to main content](#)

Create

Again, a shame that you went through these things, pretty sure that if you had a more optimal experience you would've probably stayed with whatever Pixel device you owned like the Pixel 8 it seems you owned. Not going to assume anything since I could've probably kept my Sony another year but I'm used to switching phones every 2-3 years tops lol.

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

No the at a glance weather issue is a known thing. Its all over this sub, you will eventually run into this. With the device switch im referring to the animation in the vid I linked. They fixed it in the new beta. Its still an issue on stable.

**Fran-01** OP • 2mo ago

Mmmm ok... Probably will, we'll see.

**Fran-01** OP • 2mo ago

Just spotted the device switch bug... I mean yeah it is technically a bug but it's something minor (for me at least) that wouldn't make me say that Pixel software sucks by any means. In my Sony I did have some annoying bugs in the YouTube app. Whenever I was watching YouTube shorts, the shorts would randomly scroll on their own and while watching videos the videos would randomly freeze and had to load again and sometimes the video would freeze but the audio would continue forcing me to restart the app. Another bug I had which was really annoying was the go back gesture (when you slide from the left or right side of the screen to the center), in my Sony it would get stuck and I had to either lock the device and unlock it to fix it (sometimes didn't work) or had to repeat the gesture duplicating the action. Sometimes it flat out froze and only worked after many repetitions and would do a ton of go back actions.

Going back to the device switcher, I only use this feature when I plug in my Dualsense joystick to my phone to play with it because for some reason android sends the audio to the controller's speaker yet no audio plays and even if it did, I want it to play through my headphones. This also happens on my windows PC and used to happen on my Sony so I'm guessing it's a Bluetooth/controller issue or even just normal behaviour.

I'm not justifying nor denying these issues and I think that this or any other bug/bugs that I'm yet to encounter or others have encountered have to be fixed without a doubt. I'm glad they're fixing the device switcher in the next update also at a glance can now be removed which is something that I'm happy for since I barely use it lol. However, I've been testing it for the past 20 minutes and so far, no weather issues or issues at all. Both of the weather information texts/displays (don't know how to call them) that I have set up have worked fine so far.

[Skip to main content](#)[Create](#)

Pixel 8 S25+

Sure, the Xperia is a bit of a niche phone with less support, while Pixels are often claimed to be the best android experience (i see many realizing that's not the case after 5gens of tensor). So I have different expectations.

Fran-01 OP • 2mo ago

Totally understandable and yes you're right about Xperia being niche, still I don't think Sony should provide a slightly buggy software specially for the super premium prices they charge. However, I don't think they overcharge like Google does with the 10 series.

Only time will tell if I'll keep my Pixel 10 or just like many others, get rid of it to get something else, but for now I'm satisfied with it.

Fran-01 OP • 2mo ago • Edited 2mo ago

But again, if you experienced those issues, that's a shame honestly. I'm not going to defend Google just because it's Google and because I love android, because I did have some bugs in some of my other android devices that I've owned for over 10 years now and I've owned quite a few, from Samsung (namely the Galaxy S4) to Motorola (multiple) and One Plus (10Pro), Sony, Xiaomi (multiple) and now Pixel.

They all have their flaws and some of the bugs you mention might be present but I haven't been able to see them or recreate them so I stand on what I said on the post. Bug-free experience so far.

oopspruu • 2mo ago

Pixel 7

Who in their right minds pays full price for a pixel lol? They are notorious for getting heavily discounted often. The only reason I use Pixel is for camera, software and value for money. But it's a very unreliable device and the FP sensor feel like something from 2010 that rarely works.

Fran-01 OP • 2mo ago • Edited 2mo ago

Where I live Google doesn't ship and the other options I had didn't really convince me and lastly I didn't have anyone that could deliver it for me and shipping wasn't an option as it would probably end up costing me just as much as I paid for mine. In my country we have shipping tax for smartphones which is quite pricey. So yes, I was very unfortunate to not buy it with the discount but I had no choice.

And I don't know what you're referring about the FP. It's very fast in my Pixel 10 and very responsive too and I have a screen protector...

Food4Lessy • 25d ago

\$600 for 1tb is amazing value for good enough mid-soc.

Internationally Vivo X100 Pro 256gb are excellent value for \$450

puppyyaww • 2mo ago

TL:DR Overall, it's a near-perfect Android phone held back mainly by pricing and underwhelming raw GPU power. For non-heavy gamers, it's an excellent upgrade and a phone that's easy to recommend, just not at full MSRP.

Fran-01 **OP** • 2mo ago

Completely agree.

But even as a gamer myself I think it did okay. Yeah definitely for the price there are better options for that purpose, much better ones and I'm not talking about gaming phones specifically.

And yes I don't think anyone should pay MSRP for a Pixel, unless like in my case, where you live importing the phone even with a discount would cost you close to or as much as MSRP due to taxes and import costs.

Pixel 8 S25+

At list price, they didn't have to downgrade the main sensor, keep a glossy back, cheap out with LTPS instead of LTPO and give us thicker bezels though. Hardware is very dated overall. Even Apple moved past this.

Hi

Food4Lessy • 25d ago

If you paying 800-1000 better go with Snapdragon Elite SoC or Dimensity 9400/9500.

G5 TSMC is only slightly better than G3. You get them for around \$500-600 for 512gb-1tb
