My Pixel is a brick now

News

My Pixel 6 suddenly started boot-looping overnight while charging — completely out of nowhere. It kept rebooting. I tried force restart and entering the bootloader, but nothing helped.

Later that day, after trying again multiple times, it finally booted once. Luckily I was able to copy photos etc to backup. It worked for a few hours, then went back into another boot loop. From that point on, it just kept rebooting randomly.

I eventually decided to wipe data and do a factory reset as a last resort. That didn't help either. It worked for about half day, then fell back into a reboot loop again. This time, I haven't been able to get it to boot at all.

I contacted Google Support, and they told me to visit a certified repair store. But the store refused to repair it. They said they've seen many Pixel phones with similar issues and told me my case wasn't worth repairing. They also advised me not to buy another Pixel. They didn't want to diagnose it and said it was most likely a motherboard defect. They mentioned that motherboard parts *can* be ordered, but the repair cost wouldn't make sense.

Google Support also confirmed that my phone is out of warranty, so I'm on my own: buy a new phone or pay for an expensive motherboard replacement. The support also want me to get a diagnose report, but I don't know why the two store I visited (Mobile Klinik) just don't want to do it. Even won't do a letter statement.

I loved my Pixel 6. It took amazing photos, and I really tried everything to save it. But I can't.

So now my Pixel 6 is officially a brick.

And after this experience, I will never buy another Pixel.

told me my pixel is not compatible with their service so as of right now I have no phone service and can't go to work tmr 😂

originpower OP • 4d ago

Guess even iphone does boot loops...Hope it will recover for you

Ariquitaun • 4d ago

A provider not being compatible with a specified, modern smartphone sold in your country is not a thing.

Lanky-Opposite5389 • 4d ago

It is if they don't support eSIM

Ariquitaun • 4d ago

Time to switch to a provider that exists in the xxi century

Lanky-Opposite5389 • 3d ago

Many smaller countries don't support it.

Zimi231 • 3d ago

Pixel 10 also has a physical sim slot, does it not?

Lanky-Opposite5389 • 3d ago

Depends on the variant.

mi6crazyheart • 4d ago

One more.

Paschfire • 4d ago

Sorry to hear about your loss. I have a pixel 6 Pro myself that I love and I'm just watching the eol timer slowly take it down. I hope it lasts a little longer for me.

[Skip to main content](#)[+ Create](#)

Definitely do backup routine to prevent any data loss.

It happens really in a sudden

rampwalk4remo • 4d ago

Same with my P6P as well, these days it restarts automatically. Last week ,it turned black for a minute or two while opening up an app.Gave me a minor heart attack.

I'm waiting for S26 to be announced and released. I hope my phone can stay alive still then.

originpower **OP** • 4d ago

I would suggest do more frequent backup then...

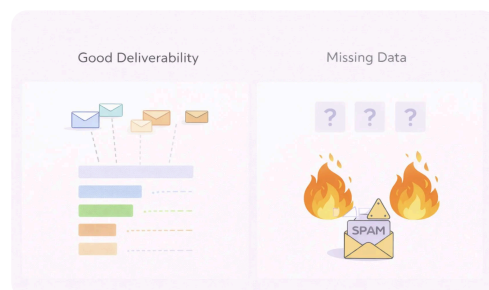

u/sendxio • Promoted

Most deliverability fires don't come from mistakes. They come from missing data. SendPost is for deliverability engineers who want fewer surprises, fewer escalations, and real control over what's happening across IPs, domains, and senders every day.

bootlegazn • 4d ago

same thing happened to me last week, but never turned on after the factory reset.

originpower **OP** • 4d ago

Yeah i kind of regret factory reset it, can not believe it made things worth....

blustrkr • 4d ago

This happened to my Nexus 5 (twice), Nexus 5X, and Pixel 1. All motherboard or power button defects. And I still went on to get the Pixel 3 and my current phone, the Pixel 6. No issues so far - knock on wood - except for a spicy battery.

Basically, I really feel your pain. :(I've been eyeing a Nothing phone for my next device but definitely not in stone yet.

really close on loosing everything... And I was just starting to browsing phones. Nothing phone seem to from same one plus founder, they have good reputation previously. I was a long time andriod user, but this made me thinking to go apple, seems they tend to last longer.

**digitect** • 3d ago

Why wouldn't you use backups? It's automatic and free.

Phones are consumable electronics, they aren't designed to last more than a few generations. They become less reliable the older they are. The Pixel 6 was released August 2021, so now five years and generations old.

You might look at the _a models. They have only slightly less premium features, but are much cheaper and easier to upgrade on a regular 3-year interval.

**originpower OP** • 3d ago

No I won't backup photos, I regulay move photos to my hard drive. I do backup other non privacy infos.

And I don't like the idea of a device should be replaced every 3 years.

My 10 years old andriod phone still works... Some people are OK with a new phone every few years, but I can not agree with that. That is the consumer trap.

In short, I don't like being pushed into a new phone

**digitect** • 3d ago

Keep clinging to that hope that you can use it beyond their designed intended obsolescence! Unfortunately, you will continue to be disappointed at failures like your post as technology continues that direction.

I grew up pre-network and pre-web. You had to back up everything on your own, and nobody did, so everybody lost data all the time. The first PC cost \$33,000 (\$10,000 in 1982 dollars). The internet was dialup. Nobody had digital cameras, and documents were measured in kilobytes, not gigabytes. Equipment is so cheap now and everything's connected... I would never want to go back.

**Vova1313** • 2d ago

Automating backup backs up only application data. The files in your, for example, DOWNLOAD folder are not backed up

**digitect** • 1d ago

[Skip to main content](#)[Create](#)**Vova1313** • 29m ago • Edited 24m ago

How much space in google drive your have ? 100Gb ? more ? Pixel 6 XL has 500 gigabyte available.

Another issue is data security.

Can you view backed up files in Google drive or in Dropbox ?

**Recent_Yellow1483** • 4d ago

Hapened to my Pixel 6 Pro too.

My opinion: culprid is the last Dezember Update. Worked flawlesely before.

Went to Nothing Phone 3

**suprarzx** • 4d ago

Agreed, worked fine before. Not a coincidence with so many bricked devices

Happened to wife's last month... Still holding onto it just in case a fix is discovered. She upgraded to pixel 10.

**originpower** **OP** • 4d ago

I can not trust pixel anymore, even my other 10 years old android phone can still open today.

Pixel can be slow but should not become a brick...

**horatiobanz** • 3d ago

is why Google will never change, they have no incentive to not keep pumping out garbage.

**CommanderCoytus** • 4d ago

I still got a pixel 3 that works. Just sold a pixel 2 that worked too, so IDK.

**originpower** OP • 4d ago

I read from other post that it might be the google tensor chip. I saw pixel 9 also have reboot issue. before pixel 6 should be fine

**originpower** OP • 4d ago

though I'm also going to try start it every now and then, if it can open I could enable unlock and try to flash a new OS...

**Npsnap1** • 4d ago

Happened to me last week too. Google Pixel 6. It started getting obscenely hot with just simple things like charging and then would reset constantly when hot. It would work fine about 30% of the day. I did up upgrade to pixel 10 but it leaves a bad taste that this is happening so frequently.

**originpower** OP • 3d ago

I think we got exactly same issue. it starts on chances. I won't go back to a pixel after this...

**TheTuxdude** • 2d ago

I had a bulging battery issue with my four year old P6. I contacted support. They mailed me a box to return this broken P6 and sent me a new one instead.

**originpower** OP • 2d ago

Do you have extended warranty? I was offered no such thing

**TheTuxdude** • 2d ago

No extended warranty. But I think the battery bulging thing might be a special case.

**trevdiddy** • 2d ago

Create

upgrade over the 6. Anything after 8 is minor in my opinion if your looking for a great cheaper alternative I also still have 8 9 and 6.

alexgrodmx • 16h ago

I have a Pixel 4a 5G with (I think) the same issue, it's dead.
