Pixel 10 Pro Apps Crashing

After the October update, all apps have to started to crash randomly or just get stuck at the splash screen. I've tried multiple reboots but still the same issue. Anyone else experiencing this ? This started a couple of days after the October update <https://imgur.com/a/alSC5kZ>

Edit: Solution by u/puzzleheadedsquid

<https://www.reddit.com/r/GooglePixel/comments/1o4rz9j/comment/nj5rhot/> seems to have worked!

I had this issue all day yesterday and finally figured out a solution last night that has been working so far. I noted it in this thread: <https://www.reddit.com/r/GooglePixel/s/qc0rSwg9ed>

The solution I found was to update to the Android OS October update, then uninstall the Google play services and Google play store updates. Uninstalling the play services update will sign you out of your Google account(s) on your phone so make sure you have secondary passkeys set up for your accounts before doing this.

No crashes since doing this. My running theory is that the October play services update is clashing with the September Android OS update in some way.

redrubberpenguin • 4mo ago

Thank you for this! For me the kicker was uninstalling play services updates. Working like normal again.

[Skip to main content](#)[+ Create](#)

Glad it helped!

hootenanymessenger OP • 4mo ago

you're a saver mate! uninstalled the play services update and everything seems to have gone back to normal. Thanka a lot!

PuzzleHeadedSquid • 4mo ago

No problem, glad it helped!

mrandr01d • 4mo ago

Top 1% Commenter

Wait the October os update or the October play services/mainline update? Clearing play services data messes with a lot of stuff including wear os pairings.

PuzzleHeadedSquid • 4mo ago

Correct that it messes a lot of things up. It's play services that's the issue, I think. However having almost every app freeze and crash on you is worse in my opinion. You can re-establish watch/ring pairing and sign into Google accounts again. Only other option for this issue would be a factory reset, I think.

archon810 • 4mo ago

The problem is it comes right back. It's a very short-term fix for a few hours. Ymmv.

PuzzleHeadedSquid • 4mo ago

I see in some of your comments you said you cleared cache and in another you cleared data for play services, but did you uninstall updates? The issue hasn't come back for me so far.

rdmetz • 4mo ago

I only cleared cash on Play services and the issue seems to have disappeared for me...

It was so bad before I literally couldn't use my phone.

Now everything seems to be running relatively normal. As far as I can tell, it's certainly not like it was just moments before I did that.

[Skip to main content](#)[Create](#)

I hope I get this issue fixed soon because it's definitely a very frustrated one

PuzzleHeadedSquid • 4mo ago

Hey fair enough! If clearing cache is a workaround for you, even temporarily, go for it. Uninstalling the updates appears to have provided a longer term solution for me but I agree that re-signing into everything is a pain. When I did it, I was just fed up and grasping at straws before biting the bullet and factory resetting it.

rdmetz • 4mo ago

Yeah I just ran through most of the apps I use daily to make sure and they're all loading just fine 6 hours later...

I don't know if my fix has already been created or if what I did actually just resolved it, but at least for now I can use my phone and if it starts acting up again I'll just do the clear cache and see if that puts you back to where I need to be.

Annoying for sure, but certainly a little less annoying than the whole process. A lot of other people have had to go through.

archon810 • 4mo ago

I did not uninstall updates, but as the issue is back with the vengeance this morning, I just did when I wiped data the second time. The problem with this solution is that Android will automatically update Play Services in the background anyway. I just probably bought some more time.

PuzzleHeadedSquid • 4mo ago

Very true. I just checked and my phone is still running 25.28.38. Some other people are saying that just clearing cache from play services will temporarily fix it. Definitely seems like a bug with newer play services versions. So far I'm over 36 hours without an app crash.

rdmetz • 4mo ago

Clearing cache on play services seems to be all that is required...even if it's only temporary solution they all seem to be at this point and at least this one doesn't require you to repair and re-sign in to a bunch of stuff after.

I'll just keep clearing cache on it until they get the issue resolved.

**archon810** • 4mo ago

As I was afraid, this solution works for a few hours, but the freezes come back.

**cdriese** • 4mo ago

I tried this and it fixed the issue for me too

**nuovocinemaparadiso** • 4mo ago

Not working for me, apps still crashes. You rolled back to previous version of play services from settings app or from the play store app?

**Gamecockmom11** • 4mo ago

Can someone tell me how to uninstall the Google Play services update and the Google Play Store update?

**cdriese** • 4mo ago

I just started experiencing this yesterday. It is frustrating. If an app does open and load it won't let me touch anything and it crashes.

**Geffo** • 4mo ago

10 Pro XL here doing the same thing. Very frustrating.

**Broad-Candidate3731** • 4mo ago

Pixel 10 Pro 1Tb

Clear cache Google services

**Geffo** • 4mo ago

Did that and can confirm it seems fixed!

**archon810** • 4mo ago

Clearing cache doesn't do it, wiping data for Play services does but it only works for a couple of hours and comes back.

[Skip to main content](#)[+ Create](#)

I can't speak for everyone but the only thing I did was clear cache on Google Play services... And my phone went from completely unusable to working perfectly fine just seconds later.

I would at least suggest trying only clearing cache first and then if necessary take further steps.

It may not be a permanent solution but it takes a lot less effort and I'd rather just clear cache a few times vs having to reinstall & sign back in to a bunch of stuff that's also likely still to break after a while.

Geffo • 4mo ago

I wiped data and cleared cache on a few things and I had to reset my Pixel Watch 4 because of that but my phone has been better and hasn't lapsed yet.

Same. Seems to happen more on mobile data than wifi, but still. Very frustrating.

Edit: Uninstalling Google Play Services update fixed it. Might just need to clear cache.

rdmetz • 4mo ago

Can confirm clearing cache is all that seems to be necessary.

TriggernometryPhD • 4mo ago

Only worked for a few hours unfortunately. P10P owner.

redrubberpenguin • 4mo ago

I had uninstalled play services updates and mine is still fine now. P10p.

[Skip to main content](#)[+](#) Create

Did more people try this? I have no issues here btw

archon810 • 4mo ago • Edited 4mo ago

Yes, same problem, here are more details <https://x.com/ArtemR/status/1977488699291213936>.

Wiping data for Play services is enough, it seems. At least for now. It could come back.

The wipe is very annoying though, it signs out of all Google accounts, removes all Google Wallet cards, unpairs your watch, disables system backup, prevents Google Home from recognizing you're home, and other random things I'm sure I'll be finding for days.

I've reported this to my Google contacts as high priority, got some good eyes on it already.

Update: Holy shit, the freezes are already back. Only took a few hours for them to return after the Play services data wipe.

ARMADILLO_COWBOY • 4mo ago

Same here. It's awful 😞

esperobbs • 4mo ago

I started to see this issue yesterday and phone is not usable

JRogan92 • 4mo ago

Same exact thing here

Everything is working fine for me.

**PSU_Jedi** • 4mo ago

Same here. Apps randomly hanging when I try to start them. A phone reboot seems to fix it for a while, then they start hanging again.

**billthecatt** • 4mo ago

Started for me this weekend. Same issues.

**Ganrokh** • 4mo ago

STORMTROOPER

Happy to see this thread! I just had the same issue. Clearing my Google Play Services cache solved it.

**TehNrd** • 4mo ago

Can confirm this started happening to me today.

**rdmetz** • 4mo ago

I just want to say that clearing cache on Play services seems to have resolved the issue immediately for me as my phone was basically unusable just seconds before that and now I've been able to use the apps like YouTube and Twitter that were crashing constantly without issue for several minutes.

Even if it's only a temporary solution. It's better than completely removing and uninstalling and having to sign back into everything.

May just want to try that first before you go to the full route.

Hopefully they get this resolved because I have never dealt with a more annoying issue!!

**archon810** • 4mo ago • Edited 4mo ago

I just got confirmation that an incident has been declared at Google, which means multiple teams have been scrambled to address it with high priority.

[Skip to main content](#)

Create

At Google, incidents are issues that:

- Are escalated (because they're too big to handle alone)
- Require an immediate response
- Require an organized response

<https://x.com/ArtemR/status/1977779265195364688>

Update: Just got news that Google thinks the Pixel hanging/crashing apps bug is now fixed. I've asked for clarification on whether the fix is server-side or requires a Play Services update.

<https://x.com/ArtemR/status/1977868145840050230>

Update: Alright, got confirmation that the Pixel crashing/hanging apps fix is server-side. There will be a post-mortem within Google, but I'm not sure if it will be made public. Incidents like this one cannot happen again. The Android System Intelligence issue is still being worked on.

<https://x.com/ArtemR/status/1977877354082087048>

KyleVPirate • 4mo ago

I have the October update on my Pixel 10 Pro XL and am not experiencing this. Best of luck mate. Hopefully I don't start to have this randomly. Everything's been like butter.

Twodapex • 4mo ago

Same thing here

Twodapex • 4mo ago

All my apps freeze and crash. Support hasn't helped much, but did tell them about this thread. Hopefully a solution soon

milnivlek • 4mo ago

Pixel 10 Pro XL

My Pixel 10 Pro XL started working properly again yesterday. Before that, it was practically unusable - every app was either freezing or crashing. But so far so good right now. Though this has made me much more suspicious now about this phone, sigh.

The torture Pixel users put themselves through to run mediocre software on mediocre hardware. . . I did it for like a decade, so I'm just as nuts as the rest of you. I can't explain how nice it's been not having to do goofy shit with goofy as fuck "fixes" for the last 9 months since switching to OnePlus. Not a single app crash. Absolute stability. It's insanely refreshing. No having to toggle airplane mode or uninstall updates or mess with developer settings to fix Google's fuckery. Shit just works, you know, like it should.

**hootenany messenger** OP • 4mo ago

Luckily I haven't had issues with my pixel in the past but this one really is making me doubt my purchase decision. :(

**BobbyBlueBlandz** • 4mo ago

Pixel 9 Pro XL

I don't think it's just a pixel 10 issue, my pixel 9 has started hanging frequently

**mezaway** • 4mo ago

Pixel 10 Pro XL

My 10PXL has not been doing this (knocking soundly on wood, here) and I'm wondering if that may be due to it running QPR2 beta 2. Sounds like it, if these September/October updates are somehow clashing. My phone isn't running those builds.

**Moltenanvil** • 4mo ago

I was able to somewhat recover temporarily by running the fix connectivity function. Settings -> Network & Internet -> Internet -> Fix connectivity (top right corner button that looks like a refresh button with a wrench) This seems to be a temporary fix that is quicker to achieve immediate relief compared to restarting the phone. I just cleared the cache for Google play services and will report back if it's a permanent fix or a temporary one.

**ElTurko1978** • 4mo ago

I have also issues with my Pixel 10 Pro XL in Germany. Since a few days when I have opened any app it stops an can't do anything only swipe up on recent apps mode and close the app and open again helps temporarily. BG

[Skip to main content](#)[Create](#)

1. Search Settings for *play services*
2. Scroll to bottom, and click on app details
3. Click on Remove updates.

**Difficult-Coconut-58** • 4mo ago

seems better now. have they made any backend changes already ?

**hootenanymessenger** [OP](#) • 4mo ago

Seems like it <https://x.com/ArtemR/status/1977868145840050230?t=GKCWP203gQaDwHliZV9Vng&s=19>

**kimsart** • 4mo ago

Happens to my pixel pro 8

**robervaul** • 4mo ago**BLNrt** • 4mo ago

Same is happening to me on my 9 pro xl did all as advertised here and the issues persist. Only thing I know so far is this might be my last pixel phone.

**rdmetz** • 4mo ago

Weird. After I cleared cache that one time my problem basically disappeared and I haven't had any more issues... Even got the October update yesterday and still good to go.

**BLNrt** • 4mo ago

I ended up transferring my esim to another phone and performing a factory reset. I even had tried to opting into beta to force a system update of some sort but phone would not recognize any incoming OTAs and the location services just stopped working. This has been very frustrating and ofc google support seems like you are talking to the most basic AI that doesnt know what to do and repeats itself. Farewell google

**gilbertSpain** • 4mo ago

Create

have to update the play services afterwards again, or leave it until November. I'm afraid to deactivate updates at all now...

**gilbertSpain** • 3mo ago

One thing to consider after uninstalling or updating playservices (not the normal updates, but completely new): There are many things to reset, many apps like banking apps, Norton etc.... But also, and this might contribute to the crashes: check for the toggle to enhance touch sensitivity in settings. If you use a screen saver, turn it on again. Its switched off after a reset! After having it switched on again, I did not experience these strange behaviours like crashes when touching the screen, but also the sonic fingerprint sensor worked perfect again.

sometimes one forgets about those little things..., that can mess up an entire system!
