Pixel 10 Pro Fold Slow "Scrolling Inertia?"

Hi everyone,

I got a P10 fold a few weeks ago, and comparing it side by side with my pixel 6, the scrolling feels like it takes a lot more work. The scrolling motion itself feels smooth, but it doesn't feel consistent and sometimes doesn't scroll all that far.

I'll include a [video link comparing my P6 vs the 10](#)

I've seen a couple of others posts on Reddit discuss this as well.

[Here](#) and [Here](#)

I've tried changing the adaptive touch and touch sensitivity settings with no avail.

Any thoughts?

Literally earlier today, I was thinking this is my only complaint about this phone. It's super super noticeable when going back to my iPhone 14 Pro Max, the slightest flip of my thumb to scroll sends the page smoothly scrolling until a smooth stop. The 10PF is short small somewhat jerky motions with a flip. I don't know how I could change it.

Create

problem with the pixel 10 series across the board. It feels like it takes a lot of effort to scroll through anything (reddit, chrome, etc.)

It is very relieving to know that I'm not crazy! (well, at least in this regard)

**ruipmjorge** • 18d ago

People say that changing screen definition to default (from maximum to default) fixes this issue. Have you tried already?

**Whiskey_Biscuit** OP • 18d ago

I noticed that pop up in a couple threads as well, but haven't been able to find a screen resolution setting.

Online, I'm seeing "settings->display & touch->screen resolution" but there is no screen resolution setting in that part of the menu

**ruipmjorge** • 18d ago

What do you mean?

It has to be there.

2Go to Display • Tap Display

Open Screen Resolution • Look for Screen resolution (On some Pixels this may be under Advanced)

Choose Your Preferred Resolution

You'll usually see two options: • High Resolution (QHD+) – sharper image, uses more battery • Full Resolution / FHD+ – slightly less sharp, better battery life

Change to full resolution.

This is all I have in my display settings: [link](#)

The only option not shown on the bottom has to do with hinge detection.

**ruipmjorge** • 18d ago

This is very weird. Let's wait for others to reply and see if anyone has the same limitation. The option should be there.

[Skip to main content](#)[Create](#)

Thank you for the help at least!

I thought it was weird, as I was seeing similar recommendations regarding the display resolution, but couldn't find the setting myself. I wonder if it has to do with it being the fold? Most of the posts I see are about the other 10 series phones.

ruipmjorge • 18d ago

Ahh maybe the fold is different since it's another kind of screen. Maybe post this doubt in the fold sub

KrewOwns • 17d ago

Pixel 10 Pro Fold

I've owned several folding phones and none of them let you adjust screen resolution, they are maxed out by default.

itstingsandithurts • 17d ago

Yes I'm in the same boat, went from a fold 9 to a fold 10 and the difference was huge, I've swapped to almost never using the inner screen for scrolling, it's too painful. Settings look the same as yours too.

It's time to consider the switch to open-source BI. You won't look back.

Pixel 10 Pro Fold

I'm wondering if this is related to the issue [I posted about](#) with mine. Because sometimes, and inconsistently, when playing a game that requires me to swipe in various directions, the swipes don't register long swipes and will stop prematurely. This sounds very similar to what you're describing.

Lol sorry that was the first thing I thought of with "swipe in various directions".

Pixel 10 Pro Fold

Might be a good test case, honestly.

999repeating • 18d ago

It's literally called "friction" in the variable.
