IceAcolyte Pixel 10 Pro, 7, 4 XL, Pixel XL

...

Pixel 10 Wireless Charging compatibility

So I don't want to make this a comprehensive list, but I did find some hint at least of what's compatible and what's not. I'm mostly wondering whether it's my Pixel 10 Pro that has battery issues and needs to be replaced, or whether it's just a quirk of the P10 line to not be compatible with many older chargers. If the former is the case, do I need to contact Google to replace the phone before I put this screen protector on? etc. All I really need is one for my car and one for when I'm on the PC..

Currently, what we know is that while we're expecting Pixel 10/Pro/XL to be compatible with the Pixelsnap chargers, there's a few threads here saying it's not, and it's even super hot after charging. This usually happens with misaligned coils (e.g. when I tried putting my Pixel 7 on the Tesla charging pad).

From another redditor, we also heard that Pixel 10 is apparently not 'compatible' with the old Qi standard. This usually means that we can still charge, but either it would charge at 3W (about 3.8V x 800-1000mAh) or cuts out randomly or and overheats. This includes our old Pixel Stands

I've since bought random chargers off Amazon. Some marked as Qi2 compatible, while others claim Qi2-certified. 9to5google also posted an article with some recommendations of full MPP certifications. Testing below are done with and without case, also with various power bricks (I don't think I have any PPS bricks though). I used Inware to check the wattage/current, but Pixel also has a built-in measurement under 'Device health & support', where it would report you what's the wattage it's charging at to 0 decimal places. AccuBattery and BatteryGuru can help measure the wattage too.

Some I've tested:

Skip to main content

Create

Various random USB-C charging bricks	10W-22W	3.9V x 4800-5200mA, presumably none are PPS?
Pixel Stand 2	3W	doesn't overheat much
AiHiwvol Qi2 charger for Tesla	3W	overheats
Andery Magsafe Car mount charger	3W	overheats
CloudValley Qi2 charger for Tesla	7W	That's about 1500mAh current. This actually looks identical (generic) to the AiHiwvol above, so I was surprised it's actually more compatible
ESR Qi2 charger for Tesla	7W	
ESR Qi2 Magsafe charger	7W	9to5google mentioned this one has full MPP certification
Anker MagGo 15W Qi2 charging stand	11W	4.21V x 2500mA. 9to5google mentioned this one has full MPP certification. Best I've tested so far.
mophie 3 in 1	1-3W	Chargers for testing at Best Buy
mophie snap+ wireless car charger	0	tries to charge then dies off. Chargers for testing at Best Buy
Mophie snap+ juice pack	3W	Chargers for testing at Best Buy
Belkin 3 in 1 15W Qi2 charger	4W	Chargers for testing at Best Buy
Anker Zolo Qi2 charger	12.5W	Works after the September Pixel update, however it's really hot compared to the Anker MagGo stand
Yootech charging puck	4W	Some old Qi chargers I had lying around
Yootech charging stand	4W	Some old Qi chargers I had lying around. Failed to charge prior to September Pixel update, but charges afterwards

Other users' tests:

- Review of the UGREEN Qi2.2 charger says that it only charged 5W on P10XL and likes to cut out
- Another [redditor](#) reported that the UGREEN air vent charger would charge 11-12W on their P10P
- Another [redditor](#) mentioned that there may be future software update pushed for backward Qi compatibility
- [Reddit reports](#) of official Pixelsnap charger not charging fast and instead overheating the phone, but a redditor seem to [have it working](#).

I bought a set of Anker Zolo chargers and they are going back. I was getting 1-4w of charging with them when paired with a 45w charger, both with and without a case. They are described as Qi2 certified 15w charging. They are getting returned. I'll wait until there's a viable option cheaper than the official Pixelsnap one.

**_devwar** • 5mo ago • Edited 5mo ago

Just adding I also purchased these and have the same experience. Also returning.

Editing to add that, if you turn the phone off and use the Anker Zolo charger, it works as expected. This may lean into a software issue.

**frankrizzo6969** • 5mo ago

Thank you I just deleted those out of my cart

**SudsingtonMcDuff** • 5mo ago

With the latest Pixel system update, these charge at 15W now. It did turn off at around 80% for me overnight and sail to start charging again, so I think that might be a software issue with adaptive charging. When I turn off the phone and place it on the charger, it charges fast and continues past 80% (40% to 90% in 40 minutes).

[Skip to main content](#)
 Create

charging stand, use as stand or collapses to a pad, 15W MagSafe-compatible / Fast Qi2 charger and came with a 20W USB-C PSU.

It works well with new 10PXL and 10 with Google Pixelsnap cases—haven't experienced any wireless charging issues or heat since receiving both phones on Thursday.

According to the Device Health & Support > Charging Diagnostics, [it's wirelessly charging at 8w](https://imgur.com/a/VzAP0LT) – <https://imgur.com/a/VzAP0LT>

Will pick up and test the new Qi2.2 when available.

8 Pro, 7 Pro, 6 Pro, 5, 4 XL, 3XL, 2 XL, 1 XL, Nexus 5, Nexus S

What charging speed did it report?

Masayoshii • 5mo ago • Edited 5mo ago

10ProXL / 10Pro / 10 / 8 PW3 45mm

Updated my post above with link to charging screenshot – it's reporting 8w wireless, though thinking it maybe 7.5w and it's rounding up.

impress__ • 2mo ago

A jaka masz temperaturę bateri podczas takiego ładowania indukcyjnego?

JehanKE2326 • 5mo ago

So the pixel 10 lineup will not work well with any wireless charger that isn't Qi2 certified even if said wireless charger can charge upto 15W?

captain_jim2 • 5mo ago • Edited 5mo ago

Pixel / Quite Black / 128GB / Project fi

It's worse than that. I bought an Anker MagGo - 15W, Qi2-Certified - and it won't charge my Pixel 10 Pro. Inware shows "not charging".

Update: Rebooting allows me to now charge wirelessly, but with pretty terrible speeds.

IceAcolyte **OP** • 5mo ago

Pixel 10 Pro, 7 , 4 XL, Pixel XL

Yep, ironically similar issue I faced with Pixel 7 back then. I had a similar post hunting down the wireless chargers that actually worked with P7..

I'm waiting for a Qi2.2 25W charger for the car, preferably one that you can mount in a CD slot. I haven't seen any yet but hopefully one comes soon

**Constellation16** • 5mo ago • Edited 5mo ago

Pixel 8 Pro

I've looked into getting a wireless EPP charger for my P8P and found the same endless issue reports, but I thought the issue was just the niche EPP profile and misalignment. I didn't want to buy countless products and send them back so I just gave up and just use wired charging. Shame that the same issues affect the Qi2 stuff. That ESR charger on Amazon (2C562A) has Qi v2.0.1 cert with MPP 15W profile. Anyway, how utterly ridiculous that certified products don't work together?! I assume this is a combination of a bad "standard" with the typical Pixel "quality".

It's also interesting how only the 10 Pro XL is certified to the latest 2.2, which added MPP25, while the other models for some reason only to 2.0. This means they officially don't even support magnetic cases, which was only added in 2.1.

Also what case do you use?

markjszymanski • 5mo ago

Appreciate the research here.

Just wanted to add that the [Samsung DUO Wireless charger](#) I have been using for years doesn't charge with my P10PXL - just gives blinking red lights.

I have that in my office and a Pixel Stand Gen 2 by my bed - looks like I will be selling both of them!

Ideally, I'd like to replace them with two 2-in-1 fast chargers (1 PixelSnap for my phone and a lay flat for my Buds Pro 2)

Any recommendations?

IceAcolyte OP • 5mo ago

Pixel 10 Pro, 7 , 4 XL, Pixel XL

This UGREEN one below may work. The 'official' Belkin one is still on preorder.

Pixel 7 Pro

I've tested today on my car, a Ford Focus 4, 2019, and I noticed it didn't charge. It is recognized, charges for a few seconds and then drops. After a few minutes it retry, but the same happens.

onfire4g05 • 5mo ago

Same, with a Tesla.

[Skip to main content](#)[+ Create](#)**flcinusa** • 5mo ago

Pixel 10

Same with my Subaru, charger light is green indicating fast wireless charge, then orange for slow then flashing orange for no charge all within 30 seconds.

**GNUflects** • 5mo ago

Same in my BYD Seal

**Angryferret** • 5mo ago

Same for my Golf GTi :(

**krazzeekev** • 4mo ago

Same with 2025 Chevy Trax

**alf239** • 3mo ago

Same with Renault Scenic ETECH. I'm returning P10P, it's not worth it. Very, very sad that I already sent P8P for trade in.

**SudsingtonMcDuff** • 5mo ago

Have you been able to retest after receiving the latest Android 16 system update? I get 15W from my Anker Zolo chargers now (only got 5W before), but still have an issue with charging stopping around 80% while charging overnight (even though I don't have that option selected in adaptive charging).

**IceAcolyte** **OP** • 5mo ago

Pixel 10 Pro, 7 , 4 XL, Pixel XL

I'm getting up to 12W from the Zolo, but that is already really good compared to some fail reports from others before, so I guess they did fix something with the recent update

**SudsingtonMcDuff** • 5mo ago

Anker support says they're waiting to get their Pixel 10 for testing, so hopefully a new version of the Zolo will charge cooler. I haven't seen any warnings from the phone about it when I check the device temperature under Device Health and Diagnostics, but I'll keep checking. It might just get better with Android updates, but I don't know how Google would do that without limiting wattage.

[Skip to main content](#)[Create](#)

Pixel 10 Pro, 7 , 4 XL, Pixel XL

That Zolo scared me how hot it was 😬 thought my phone was gonna melt (just that magnet circle)

SudsingtonMcDuff • 5mo ago • Edited 5mo ago

Update: the latest September update (rolled out Sept 16th) fixed the wireless charging issues on the Anker Zolo and MagGo chargers!

Edit: unfortunately the Zolo charger still shuts off after finishing charging and doesn't turn back on until you unplug from the wall. Returned and got a Belkin Qi2 charger that works well.

IceAcolyte **OP** • 5mo ago

Pixel 10 Pro, 7 , 4 XL, Pixel XL

What the heck is these stealth fixes

SudsingtonMcDuff • 5mo ago

Unfortunate update, it seems to still be an issue. It worked for the first charge after the update then I continued to have the same charging issues. Reached out again to Google and Anker.

SudsingtonMcDuff • 5mo ago

Yeah, it definitely gets warm, but my phone never got higher than 102F while charging up to 97%, according to the built-in device temp measurement (went up from 86.5 at ~56% charge). I'll check the temp of the Zolo and the back of the phone next time I charge with a laser thermometer.

Anker does say they use polycarbonate in the Zolo casing to better distribute heat, so the warm to hot exterior is somewhat expected I guess.

IceAcolyte **OP** • 5mo ago

Pixel 10 Pro, 7 , 4 XL, Pixel XL

Grabbed the update - didn't see any changes to the chargers I have though. I'll try out the Zolo too.

ShaneAN7 • 5mo ago

I've got a Pixel 10 Pro XL and got multiple Anker banks and have returned them. Currently have a Anker Nano Power Bank, Ultra-Slim 5,000mAh because the form factor is perfect, but bought a keychain USB cable to connect because the speed is terrible.

[Skip to main content](#)

Create

handshake between the devices that isn't happening?

Also - I have got an ESR car mount "Qi2 15W MagSafe Car Mount Charger with CryoBoost" - for the form factor. Max speed obvs 15W but I doubt I'm getting that. I think I saw that they'll be releasing a Qi2.2 25W device eminently. Wondering if anyone has heard the same.

Finally -- how is everyone testing the speed of charging. Is there a free, simple app for non rooted devices?

**IceAcolyte** OP • 5mo ago

Pixel 10 Pro, 7 , 4 XL, Pixel XL

Yeah, you can use Inware, AccuBattery, or BatteryGuru, but you can also use the built in battery troubleshooter to measure only wattage to 0 decimal places.

**ProjectFT86** • 5mo ago

Which specific Anker model did you get?

**IceAcolyte** OP • 5mo ago

Pixel 10 Pro, 7 , 4 XL, Pixel XL

this one: <https://www.bestbuy.com/product/anker-maggo-wireless-charger-single-stand-black/JJ858RX26F>

**indigo196** • 5mo ago

Would love to see some results for the Qi2 Battery Packs such as the Anker MagGo Power Bank, Qi2 and Anker MagGo Power Bank, Ultra-Slim.

**captain_jim2** • 5mo ago • Edited 5mo ago

Pixel / Quite Black / 128GB / Project fi

Anker MagGo 15W Qi2 charging stand does NOT charge my Pixel 10 Pro.

Update: Rebooting allows me to now charge wirelessly, but with pretty terrible speeds.

**philmnn1** • 5mo ago

Pixel 10 pro. Tried 5 different magsafe chargers with bricks all rated for 25+ watts and never got more than 3.9 watts. I'm not sure about the whole "certified" thing with these chargers but I do know every charger I used was rated for at least 15 watts.

**IceAcolyte** OP • 5mo ago

[Skip to main content](#)[Create](#)**Alarmed-Direction-22** • 5mo ago • Edited 5mo ago

I bought the Ugreen air vent charger that is mentioned above. It charges my Pixel 10 Pro XL with 8-12W

**nxtiak** • 5mo ago

You have the older black one? There is a newer UGreen 25w that's silver. This one and is on sale for \$29: <https://www.amazon.com/gp/product/B0DZX8QGB5>

**chance553** • 5mo ago

Pixel 10 pro will not charge on my built in tesla wireless charger. It turns green for a minute, then stops. Whatever amazon magsafe charger i bought a few years ago charges it just fine every night though. The listing is gone from Amazon so I am unable to link them. I ordered a couple more different Qi compatible chargers, we will see if they work.

**EnvironmentalValue86** • 5mo ago

This is a quote from Google in their support chat:

"When it comes to the charging issue, you can submit that as a feedback however, just to set proper expectations, the Pixel is already built for Qi2 charging, and the Qi1 charging may no longer be usable when new updates are released. When new operating systems are being introduced, the old models may no longer be compatible since the technology keeps upgrading."

**alf239** • 3mo ago

well, thank you! returned that crap.

**jojodaclown** • 5mo ago

Bought a new Bronco, Pixel 10 Pro doesn't work with the vehicle wireless charger. Honestly Bullsh*t.

**Survey-Academic** • 5mo ago

Pixel 10 Pro XL will not charge on the charging pad of my 2025 Polestar 3, with and without case. Recognizes but cuts out after about 30 seconds. Maddening! It's a 2025 car!!!

[Skip to main content](#)[Create](#)**IndefiniteBen** • 5mo ago

Pixel 5

I have an under desk charger which does charge my Pixel 10 Pro. It **charges at about 3.8W** until it gets warm and then it slows down.

Though to be fair my old Pixel 5 only charges at about 2.5W on the same charger.

KPON Long Range 30mm Invisible Wireless Phone Charger Hidden Under Table Inductive Charger for iPhone 14/13/12/11/Pro/Mini/Max/Xs, Samsung S23/S22/S21/S20

[Amazon DE Link.](#)

**thegenRL** • 5mo ago

Pixel 10 Pro XL here. I have an Anker MagGo Power Bank (A1664) which is reporting 6 - 7 W on Ampere app if that's helpful to anyone. I'm using a Peak Design case with it, without the case getting 7-8 W. Also without case getting 2.5-3.5 W on original Pixel Stand and similar for other stands. Previously very very slow charger speeds from pixel 7 with same case type, so this is a big improvement. Yet to try charging with my BYD Sealion 7 car charger yet

**Character_Deer_7450** • 2mo ago

Doesn't work on byd seal. Charges for 10secs then it cuts off. Went back to my old pixel after that

**IdlewildMogwai** • 5mo ago

I have a pixel 10 pro and an Anker power wave pad that is 15w and I have just purchased the pixel snap charger with the stand. With a Spigen rugged armour case on or off I get 5w only on the Anker (no surprise) but I do get 15w on the pixel snap charger.

**IceAcolyte** OP • 5mo ago

Pixel 10 Pro, 7 , 4 XL, Pixel XL

Oh that's actually good, haven't heard a report of someone getting the full 15W or getting the official charger working (the ones who have it working might be staying quiet too heh)

**falconknife34** • 5mo ago

I recently bought a Pixel 10 Pro XL, from the high speed charging dock of Anker I can only use type-c cable to charge. But I want something with magsafe to my desk while working. I saw it supports up to

[Skip to main content](#)

Create

Eindhoven for Pixel phones so. It's hard to try in store...

But coming from Samsung S23 Ultra it's charging speed is slow and weirdly with that much of battery, it's draining too fast. It has been 6 days until I bought, longest is 7 hours of screen time.

JSK23 • 5mo ago • Edited 5mo ago

Im getting about 12W on the [ESR for MagSafe Power Bank 5,000mAh Qi2 Certified 15W Ultra-Fast Battery Pack](#). But that is only with my Spigen Tough Armor off.

With the case on, I only get like 8W.

Is that normal for a case with a built in magnet to see that much drop off?

*edit - I take that back. Those were Ampere figures. The battery charging issue diagnostic in the Android system settings says I am getting 11W with the case on, and 15W with the case off? Why so different than Ampere?

Still a bigger drop off that I expected with the case.

markrabbish • 4mo ago

Can you please elaborate on what the "battery charging issue diagnostic in the Android system settings" is and how you run it?

JSK23 • 4mo ago

Battery diagnostics - > issue with charging

markrabbish • 4mo ago

OK, [this is the screen](#) I get -- where does it let you show your charging rate (you said "The battery charging issue diagnostic in the Android system settings says I am getting 11W")

JSK23 • 4mo ago

Doesn't look like you are on a pixel 10, or maybe not the latest version of android.

markrabbish • 4mo ago

Pixel 10 Android 16 Build BD3A.250721.001.E1 (brand new phone).

What does your screen say?

1

[Skip to main content](#)[Create](#)**markrabbish** • 4mo ago

Ok bro, so where is the part where it shows the wattage you are charging at??

**JSK23** • 4mo ago

https://www.reddit.com/r/GooglePixel/comments/1n4hx9c/pixel_10_wireless_charging_compatibility/nj7cko2/

**markrabbish** • 4mo ago

I'm done wasting my time, you are either trolling or have the communication skills of a 4 year old

[More replies](#)**anyunusedusname** • 5mo ago

Thanks for this, following.

**ZiggyCross** • 5mo ago

I got an Anker 313, it charges for 5-10 seconds and then stops. I get the same issue with my iPhone 13 though, so it might be a faulty unit.

**Empty-Status-6135** • 4mo ago

Anyone tried this one (just search AliExpr for "QI2 Ice Cooling Tempered Glass RGB Magnetic Wireless Car Charger" as I can't paste the link here) - Unknown brand, but 15W are enough for nonXL model, and at least there is one positive review of an user with Pixel 10 (althout the picture that the reviewer attached is not showing it is charging....).

I was decided to go for <https://eu.ugreen.com/collections/magflow-wireless-magnetic-25w-fast-charger-power-bank/products/magflow-magnetic-wireless-car-charger-25w-magsafe> but it doesn't have any "fan" for cooling, which might be the nice-to-have feature.

**still-at-the-beach** • 4mo ago

What about the Samsung triple charger? I have a few for our Samsung's but thinking to buy a pixel 10 pro. Will it charge?

Create

**mortenhoe** • 4mo ago

My old Qi charger heated up my new Pixel 10 like there was no day tomorrow. After reading this thread, and doing some research, I ordered the Belkin Boostcharge Pro Qi2 puck. All Pixel 10 are listed as compatible on their website. And it seems to deliver the 15W promised. But most importantly my phone does not heat up anymore. I measured 10-11W but its an old USB meter. I will try with a newer one that is PD negotiation compatible later today.

**Daxino82** • 3mo ago

How is the belkin charger performing? I purchased it recently but I notice something strange, without the cover the charger delivers around 10w (which becomes 6W measured with the accubattery) while with the cover the charger delivers around 20w (which becomes 12.5W measured with the accubattery). I'm also using a fan to reduce temperatures. The cover does not have magnets.

**mortenhoe** • 2mo ago

My cover is ultra thin kevlar. I see no difference in charging without cover. I must admit I stopped caring when my phone stopped getting super hot while charging. So I havent.measured anymore or thought about it since I made this post. Been using the Belking Boost Boostcharge Pro Qi2 every day.

**DMercenary** • 3mo ago**iON Wireless Duo**

Doesnt seem to work very well. It'll charge for a bit and then start blinking red.

**impress__** • 2mo ago

A jakie macie koledzy temperaturę bateri na ładowaniu indukcyjnym?
