Shame on you Google

I am shocked that after Pixel 7 video quality was not addressed at all.

I think even Xiaomi phones are way better in video category that pixel.

Pixel 10 Pro

I bet that video will always be behind the competition, because Google is relying mostly on software for post processing. And if this is ok for images, this is not the same for realtime video, thus why they introduced Video Boost. As others said - you need a really beefy DSP chip with hardware capabilities for video to provide a higher level of video capture. And it seems that this is not Google's priority for the last 4-5 generations.

Video depends heavily on the chip inside the phone, less so on the camera hardware quality. This just shows that their own chips are still not on the same level as others.

Pixel 10 Pro XL Top 1% Poster

This is misinformation, photo and video depends on the ISP not so much on the CPU

But it's different from Tensor, it's another completely different spec'd chip

Honestly I had quite some high hopes for the pixel 10 in that sense. I was really set on buying the 10xl, mostly because I do quite some on the go video work. But seeing how little to no upgrades there have been in that sense I'm quite set on skipping this update too.. I'm a rather happy owner of a pixel 6 that has still very good battery life, but I really had hopes..
