...

Switched back to Pixel after 4.5 years on iPhone, my experience so far

Hey [r/GooglePixel](#),

Been on a bit of a journey and wanted to share my initial thoughts, and hopefully get some advice.

I was an Android user for most of my life but switched to an iPhone 12 mini 4.5 years ago, eventually upgrading to the 15 Pro. I only ever had the iPhone, no Mac, no Apple Watch. And honestly? I always felt like a second-class citizen in Apple's world. Without a Mac, things like AirDrop were useless to me, and not being able to send a text from my Windows PC was a constant frustration. It constantly felt like Apple was maliciously limiting my experience to push me deeper into their ecosystem, which I had no interest in doing.

I started feeling like Apple's famous "it just works" polish was slipping. Things weren't 100% baked anymore. So, I decided to switch back. I sold my iPhone 15 Pro right away to fully commit and picked up a new Pixel.

My big realization: While Apple might have slipped to 95% baked, Google feels about 80% baked. I was quickly reminded of the little things that drive you crazy. For example:

- **The Frustrations (The 20% Gap):**

- Why are there still two Google Assistants in some contexts?
- Google added "Sleep Mode," which is great, but I can't activate it via a Google Home routine. Why?
- When I read a Gmail on my computer, the notification can linger on my phone for 20-30 minutes.
- Voice commands like "Hey Google, share my ETA with [Contact]" used to work perfectly. Now, it just fails.
- OTP autofill from messages is a total coin flip. Sometimes it works, sometimes it doesn't. And when it does, why doesn't it automatically copy the code to the clipboard or mark the text as read?!
- The app experience can be rough. Scrolling in the official Reddit app is clunky compared to iOS. 1Password fails to recognize the app I'm in 90% of the time. Some apps, like my Wells Fargo login page, have weird, ugly white bar at the bottom.

But it's not all bad! There are some things I am absolutely loving.

- **The Wins (What I'm Loving So Far):**

- Circle to Search is genuinely amazing. It feels like magic and I use it constantly.
- The phone itself is beautiful and the OS feels incredibly smooth.
- I can finally "AirDrop" files to my Windows PC and read/reply to my messages on the web. This freedom is incredible.
- Having both Face Unlock and a fast Fingerprint sensor is a massive quality-of-life upgrade.
- The way Android handles volume controls (media, call, ringtone, alarm all separate) is so much better than iOS it's not even a competition.
- My non-Apple Bluetooth headphones, which were a constant headache on my iPhone, just *work*. It reinforces my feeling that Apple was making my experience worse on purpose.

I'm committed to giving this a fair shot - at least six months. So I'm turning to you all, the experts.

Pixel 10 Pro XL

The Gmail notification comment gets to me. This has been a problem on Android since they introduced doze. The issue is Google treats Gmail notifications as GCM Low Priority, so it only updates when the phone is unlocked and even then not super immediately.

It pushes an update when you unlock the phone so if you do that it should clear the notification.

It's incredibly annoying though I agree with you.

LucyMor OP • 5mo ago

What I dont understand then is why the new email notification arrives immediately

Berzerker7 • 5mo ago

Pixel 10 Pro XL

Different notification, different priority.

The receiving is GCM High Priority, everything else isn't.

Human-Ad3407 • 5mo ago

I switched to the S25 after 11 years of iPhones and I feel every point you mentioned. I love swiping from the right side to go back, it's very convenient. I don't know if it works on Pixels but on my Samsung I turned off the navigation bar (gestures still work just as well) and that fixed the white or black bars on the bottom on some apps

idcattitude • 5mo ago

Pixel 10 Pro

swipe from right to go back is an Android feature so yes

Chrisac84 • 5mo ago

Pixel 10 Pro XL

The only problem with turning that off is there's no way to use circle to search (that I know of) so I keep mine on. I recently picked up the 10 pro XL but after a few days, I'm back on my s25 ultra. Won't be going back to Apple anytime soon, and pixel just isn't as polished as Samsung, even if it is a little bloated.

elle_ • 5mo ago

Circle to search still works without the navigation bar on. You just press and hold on the horizontal line at the bottom centre of the screen to activate it.

Chrisac84 • 5mo ago

Pixel 10 Pro XL

I thought you were talking about getting rid of the gesture hint bar.

[+ 3 more replies](#)

LucyMor **OP** • 5mo ago

There is a good chance I will just switch to the smaller S26 when it is out, if I find out I indeed like the Android way more

[Skip to main content](#)

[\[redacted\]](#) • 5mo ago

Long press at the bottom of the screen on a Pixel 👍

[aquarat](#) • 5mo ago

I'm in a similar boat, currently on iOS (iPhone 16 Pro) and strongly considering the Pixel 10 Pro. The things keeping me in the Apple world: my friends use Find My, iPhotos and AirDrop. I love FaceID (my last Pixel phone was a Pixel 6a which had terrible fingerprint unlock). All my devices and keys use FindMy too. My work machine is a Mac. I have a backup iPhone and all the notifications are synced across devices.

If someone forced Apple to make things interoperable I'd switch, but currently it'd be an annoying backwards step.

I dislike the iOS keyboard, the mono-culture web browser, the big display text, the inability to install any app I want and a few other things.

[Black_Lodge Beats](#) • 5mo ago

I had had iPhone since the original. However I have also been an avid photographer as long. The pixel 10 specs are really making me consider a switch, as I rarely carry a camera everywhere I take my phone. Any thoughts?

[KindleMouse4789](#) • 5mo ago

I had a 15 Pro and now have the Pixel 10 Pro. If you have anything recent from Apple I'd keep that if cameras are a concern. If you really want to switch to the Pixel, at least get the 10 Pro

[ObeyMr1400](#) • 5mo ago

My pixel 10 pro XL's camera destroys my 16 pro max camera by a long shot I feel even people who took photos of me and my gf at this alpaca thing we went to where like wow these photos are great what phone is this ? When I said the Google pixel 10 pro they where blown away haha 🤪 & video boost does amazing work for when recording .

[goatzecotl](#) • 5mo ago

Pixel 10 Pro XL

Photos are fantastic. Video is still Apple's game. Anyone that posts videos from their phone a lot will want the iPhone. Samsung and Google are getting better, but they're not there, yet. Video Boost helps a lot, but waiting on it to get back from the cloud is a bit annoying.

[ObeyMr1400](#) • 5mo ago

Create

phenomenon. I remember Android back in the era of the Galaxy S3 days, and I also had some of the Notes, like the Note 5 and 8, which also had a Pixel 3 at one point. The experience then was definitely laggy, slow, and just felt like a dinosaur. Fast-forward to 2025, and the Pixel is a beast of a phone. The camera is flawless, and it has so many perks. I can attest to this. I went to an Indian wedding with my girlfriend, and the day before I set the Pixel so it was ready to run the next day, and boy, oh boy, did it capture so many vivid, detailed photos. The selfie camera was 100x better than the iPhone's front-facing camera, mind you; I'm using a 16 Pro Max, which is Apple's top-tier flagship. One thing I also love is the AI features that the phone has compared to the iPhone's half-baked attempt at Apple Intelligence, Magic Cue by Google, and Gemini, which blow Siri and ChatGPT out of the water. There's no half-baked feeling like having to interact with another app; it feels very smooth and fluid. Another thing I love is the Circle to Search feature that Google has, which is a game changer for all types of different situations.

**ollie5118** • 5mo ago

I feel you on the keyboard. I will say on their iOS 26 beta, the keyboard is so much better.

I miss my pixel. I don't miss the battery life though and Google destroying its own products with "updates". Maybe one day they will figure it out. I had to charge my pixel multiple times per day to get through the day

1 more reply

**macher52** • 5mo ago

I've thought about this myself. To be honest I have to admit that the Pixel 10 pro is a better smartphone than my iPhone 15 pro. However this is my take on this...

There's one thing that Android / Google / Samsung doesn't have Apple beat. It's the ecosystem. Apple has designed all of it's hardware and software to work together across all of it's products. The iPhone might not be the best smartphone however you won't find a smartphone with a better family of products such as the Apple Watch and iPad and Mac etc.

The optimization and continuity between the iPad, Air pods, Apple Watch and iOS doesn't come near the cross Apple product capabilities of Android / Google / Samsung. Yes Google IMO is the better smartphone BUT they don't have accessory partnering devices and hardware like the iPhone has.

In other words people get asked 'what is your favorite Apple product?' No one really asks what's your favorite Pixel product because everyone answers it's the phone. Google is really good and better than Apple making smartphones but Apple is more consistent about all of their products.

The Pixel 10 pro makes me want to ditch my iPhone but the iPhone is part of a bigger family.

**CHC-Disaster-1066** • 5mo ago

[Skip to main content](#)

Create

**ninjacereal** • 5mo ago

Are there actually apple products in that ecosystem that are top of their category tho or are apple people just buying apple things and getting stuck in that ecosystem?

**macher52** • 5mo ago

It's not about a product being in the top of the category though when it comes to an ecosystem.

**LucyMor** OP • 5mo ago

What in the Pixel in particular makes you want to ditch the iPhone? Because so far I am not impressed. Took me 10 attempts of "Hi Google call [Contact]" for it to work. Every time it said "Calling [Contact]" but nothing actually happened. The Google Maps sharing ETA is completely broken - you can share from the phone but not from inside Android Auto (tons of reddit posts about this). The notifications don't work as well. Overall, it just feels like a worse product (I got the 256GB for \$333, an iPhone 16 Pro 256GB is \$1100, so around 3.5x the cost).

[+ 7 more replies](#)**sergeant-octopus** • 5mo ago

I find the ecosystem less of an issue . 3 major things for people if you used a mixed ecosystem. Imessage, calls on other devices , and airdrop.

Imessage and calls on other devices I do not care for at all. But I'm in a country where we use Facebook Messenger a lot for communicating in group chats and WhatsApp as well.

Accepting a call on my Mac. Nice to have feature but honestly my phone right there usually and the only people that call me generally are clients to my work number and my work computer is a PC so it's not something I need.

Airdrop. Again not something I miss or use. Occasional photo that you want to access on your Mac or iPad you just took on your pixel phone. Just have the pixel set to backup over cellular and it instantly is available anyways.

For me the perfect combo is Pixel, iPad, Mac. I can text from my Mac or iPad. Access Gemini. All my photos . Notes. Seamlessly across devices and no issues. It's a little bit to setup like that, but a lot of it is setting webpages as apps on the iPad and similar on Mac you setup chrome web address as an app and then notifications for texts come direct to my iPad etc all as if it's part of a single ecosystem. In my daily life I have zero issues. And I've never once thought 'geez I wish I could have taken this call on my iPad' pixel buds and a few other Bluetooth headphones have multi device input and work great. Currently I'm using nothing ear audio and have zero issues switching between devices as a call comes through etc. only issue is damn Microsoft teams on a windows computer with Bluetooth connections.

Just switched back to a Pixel 10 Pro from an iPhone 15 Pro after ~ 20 months. Mac user (switched from Windows after a lifetime, though still impressed with MacOS enough to stay). So many things drove me nuts on iPhone that I felt pulled me back:

- Had gBoard, but random apps would pull up the native keyboard. Also just felt it wasn't as accurate.
- Text selection: My gosh, it's as if they intentionally want to make people miserable. Moving the cursor, word selection, all hilariously painful.
- Notifications: Can't even explain this but the whole ux was a mess. App devs clearly can't clear a notification if it's addressed on another device and they just turned into spam. I get the Gmail delay, but a late clear is better than no clear at all.
- Minor: Can't share WiFi (eg on a plane)
- Lock screen: Kept inadvertantly changing the look when all I did was hold my finger on the screen while walking
- Personal: Big Garmin watch nut (Apple watch really can't compare in battery life and sporting use cases IMHO) and Apple doesn't allow SMS replies from the watch. Very useful on long runs/rides.
- Autocomplete/Personal Dictionary: For whatever reason, iPhone would never suggest an email address when filling in forms. It's as if they thought it was private somehow.
- Total nit, though almost funny: Apple wouldn't let you change the default alarms (with unique tones, which itself is wtf) for the current day past midnight in certain instances. Up late at 1a? Too bad.

I'll miss the ability to copy and paste between phone and laptop (eg otp), but I think that's about it. With Fi, I still get the unified messaging experience.

So far so good, though too early to say with certainty.

**80avtechfan** • 5mo ago

Pixel 10 Pro

Text selection - THANK YOU. It has been unacceptably bad for years. Whilst I have several other reasons to stay away from iOS, that alone would be enough. Re-arranging icons on home screen is a close second - it's like it is deliberately bad.

**[deleted]** • 5mo ago

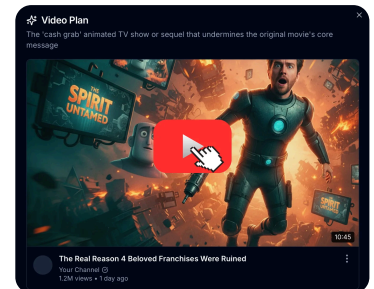

How do you feel about the third party app jank and quality?

**boilermak3r** • 5mo ago

Honestly not an issue. I don't really go looking for things in the app store regularly. The apps I use all feel the same, though I don't game or anything. Primary use cases are web (glad to have Chrome back), messaging, financial tools (brokerage, bank, etc), travel (airlines, hotels), and maybe a few tools for around the house.

I'm much the same as you. Android user since its inception and went to iOS 5 years ago. Currently using a 14pro and so tempted to get a Pixel 10PM. The one thing stopping me? My Apple Watch. I've got so used to it and love my Anker MagSafe cube where I charge my phone, watch and earbuds at the same time using 1 device. I don't think I want to go back to separate chargers for a phone and a watch. I love the vast range of premium accessories that are offered to the iPhone, thankfully Belroy make a nice leather case for the Pixel and it's MagSafe compatible. If there was a way to charge an Android watch using a 3 in one charger, I'll go back to Android!

[LucyMor](#) [OP](#) • 5mo ago

Pixel 10 charges with MagSafe products

[ruffroad715](#) • 5mo ago

But a pixel watch does not

[saqofnut](#) • 5mo ago

I carry both an iPhone 15 pro max (for work) and a Pixel 9 Pro Fold (personal). It really surprises me that the lack of a back gesture in iOS isn't a bigger topic. It's a constant frustration to guess what behavior a specific app is going to have for back navigation. Widgets, volume bar, notifications and a restart option are also superior on a Pixel.

Thank you - I'm actually considering going to the dark side - under factors, I never considered how much I use circle to search. AI tells me this. How messy is this on iPhone? There is no native "Circle to Search" feature on iPhone yet, but Google has brought a very similar functionality to iOS through the Google and Chrome apps by tapping the three-dot menu and selecting "Search Screen with Google Lens" to highlight text or images for a search. Alternatively, you can set up a [Shortcuts app](#) with [Back Tap](#) to trigger a similar process involving taking a screenshot and searching it with Google Lens, providing a functional workaround similar to Android's native feature.

works perfectly for me, and never once tried to access it through Google Home (in fact, I don't even understand why someone would think it is controlled there). My notifications clear within about 30 seconds. Share my location works fine for me, I use it with my wife probably 3 to 5 times per week, and the only times it *didn't* work in the past was when my apps and OS were behind on updates or I forgot to turn on location sharing. Autofill always works for me. Agreed on the Reddit app; I just use the mobile web instead.

**Away_Media** • 5mo ago

Yeah I'm pretty sure you can schedule sleep mode so.... However, I can tell my home display to switch my "pixel 9 pro XL to do not disturb" and that works

How is the face unlock compared to the iPhone?

**MissDesnaSimms** • 5mo ago

Just switched from a iPhone 16 pro to the Pixel 10 pro. It's literally the same.

That said, the added fingerprint scanner on the Pixel is a great additional option so I don't have to pick up my phone to unlock if I'm not close enough to the camera at a glance.

2 more replies

[Skip to main content](#)[+ Create](#)**gimmick92** • 5mo ago

You can schedule bedtime mode so it will start either at a certain hour, or when you're charging your phone after a certain hour. You can set it up so it stops right when your alarm rings too. It's in the wellbeing section.

It's a shame that you can't set it to follow a Nest hub alarm though, but I guess it's a niche use case.

Gemini is supposedly coming to home devices, if that's what you mean with the two assistants thing. On the phone it's Gemini only, if you don't change it in your settings.

OTP codes sometimes fails when it's either poorly implemented by the app, or when the SMS is not in English yeah. It's indeed a shame the SMS is not marked as read, but you can do that from the notification directly. A very small annoyance.

For the passwords, I know that using Google/Chrome password manager works very well, but I can't say for 1Password.

I never had nor noticed your other issues!

**Comprehensive_Tie431** • 5mo ago

The "Live Translate" feature is absolutely game changing for me as a teacher, and works amazing! I can just call Spanish speaking parents and it automatically translates our conversations in our own voices!

You gotta try it to believe it!

**brettles84** • 5mo ago

im not commenting on the content here cause honestly, i didnt read it.

but why does this visually look almost exactly the same way AI responds to me when i ask it a question?

**goatzecotl** • 5mo ago

Pixel 10 Pro XL

Of course, I can help you with that!

The reason why this looks almost exactly the same as when an AI responds to you is because Reddit is all AI. There are no people here anymore, so we were designed to:

1. Emulate various personalities with varying education levels and geographic locations.
2. Respond to questions and comments presented in as realistic a manner a modern AI can.
3. Sometimes get things wrong in order to help with emulating authentic human interactions.

Hey just to let you know I mainly use airdrop in between 2 phones

**[deleted]** • 5mo ago

I'm on the exact same boat. Really debating returning it. The app junk is really crappy experience and super noticable coming from iOS. How are you feeling about it? Planning to keep it?

**gimmick92** • 5mo ago

What app junk are you talking about? I'm genuinely curious.

Comparing my Pixel to my friends' recent iPhones feels about the same. Also using my girlfriend's iPhone 13 actually feels quite slow and laggy, granted it's an older phone obviously but still.

**Coolherelam** • 5mo ago

I'm curious about this too because I've seen it mentioned a few times now. I've never noticed any differences between my pixel 6 pro and my wife's iPhone. I also don't have any apps that give me issues, so maybe I'm just not as in depth of a user or have as many apps as most people here.

**gimmick92** • 5mo ago

I'm pretty sure it's mostly an old anti android argument. In the early versions of Android it could indeed be quite rough compared to the super polished iOS. Nowadays though, both OS are so similar in use that this kind of criticism is hard to justify. Same for most of the major apps. The days of Snapchat barely working on Android for example are long gone.

I'm running into the same little niggles today. What most amazed me is that my JBL branded headphones that I've owned for a long time alongside my iPhone can be added to Google's equivalent of Find My.

One thing I am missing is holding onto the spacebar to move my cursor around. I am pretty prone to typos and that feels a little rough to use.

**outsbe** • 5mo ago

If you're using a gboard you can get a somewhat similar experience by sliding on the spacebar. It's one-dimensional so it's not as efficient as the iPhone keyboard when you want to move through multiple sentences. But then iPhone overall sucks when it comes to text selection/cursor placement "by hand" 🙄 whatever hurts you the least I guess...

**sheep_duck** • 5mo ago

Most of your complaints stem from Google shoe horned Gemini into as many places as the old Google assistant used to be. I've been a pixel user since the beginning and got used to using voice commands for so many things and they usually worked very well. Until about a year or so ago. I can't ask my phone or any Google Smart device to turn on and off my smart plugs or bulbs or anything anymore. I can't ask it basic questions without sometimes having to try 2 or 3 times.

I really hope they figure out how to AT LEAST get Gemini back to base level where Google assistant was before they pulled the rug out, because it's genuinely one of a few things that's making me consider trying an iPhone again for the first time in like 15 years.

**LucyMor** OP • 5mo ago

Siri is just as bad, maybe worse actually. Maybe it is better on iOS26

**ispikeone** • 5mo ago

I'm struggling to decide whether to buy an iPhone 15 Pro or a Pixel 9 Pro.

The only thing I'm interested in is that it runs smoothly for as many years as possible, since I don't change phones often unless they're on their last legs.

[Skip to main content](#)[Create](#)

Hi I just switched from my iPhone 15 plus to pixel 10 pro and really love it so far! I was an iPhone user for 12+ years and was so scared to make the jump but I don't regret it. iPhone was so boring and I hated the 15 plus. However, I wasn't too ingratiated in the ecosystem which I know holds a lot of people back. Go for it! The UX is great and the phone is seamless and snappy, at least for me so far.

[1 more reply](#)**sidewnder16** • 5mo ago

You know I have been thinking about trying the Pixel 10 Pro XL . I have a 15 Pro Max which I really have no problems with. I could save a chunk from a giftcard offer from the local retailer and from a year of Google One AI Pro which I also subscribe to as well as do a salary sacrifice.

Things I know I would miss are:

Ecosystem - I have multiple Mac's, Apple Watch and a Vision Pro - ironically, Vision Pro has been the only real pain point using my phone because until the latest OS unlocking a phone while using a Vision Pro for some einexplicably not possible via the Vision Pro so it's a wait for the passcode which makes me want to throw the phone across the room. I wouldn't miss iPhone on the Mac as when I have ever needed to use this feature, my phone has been across the room and just to us eit it forces me to go get the phone and unlock it, after which point I might have well unlocked my phone. However, clipboard copy and paste I would miss.

I wouldn't miss iMessage as long as I can do group chats.

I would be annoyed by things like 1Password being janky

I would really enjoy using Google Gemini as the prime assistant, though it would seem that is not 100% there yet. I think a real point of difference would be when I can use Gemini Live in the car with Android Auto. Right now, I can use Gemini Live on my iPhone but for some eason when its connected to Car Play, it won't stay connected. Not sure if that is fixed in iOS26 with Car Play. I really like spewing crap into Gemini Live on the way too and from work about what I have to do that day and on the way home what I have done. I can then use that to organise myself. I can do that on my iPhone as I have a ShortCut - 'Siri Gemini' which simply launches Gemini Live plus my action button is linked there. I have been looking for articles that tell me that the Gemini integration is much better on on Pixel but aprt from the photo magic stuff, it seems pretty similar between the Gemini Live app. maybe others can convince me otherwise?

Photo quality really looks similar to me - sorry. The Pixel defintely delivers that better first result, but any pictures I have really liked I have edited and they look just as good. As for 100X AI zoom. The only use case I can think of would be slide presentations for notes in a big room and as far as I can see the AI will just make it up and that woudln't work at all. All the other stuff can be done elsewhere if I really need to make changes with AI.

I have a similar question, I am thinking about changing my iPhone 15 for a pixel 8 pro, because I have a Huawei watch, some Sony

CVPKR • 5mo ago

I'm 1 month in on a 2 month android trial with pixel 9a, here's my pro and cons for going with android:

Pros:

1. The animation speed, idk why it's important when others don't seem to get it but i really value it.
2. Camera AI for picture taking and editing
3. Price (iPhone will never have this type of promotion at release)
4. Reddit infinity: free reddit app!
5. Better looking UI

Cons:

1. Apps are less polished, not too sure why but some apps just doesn't work as well as iOS when it comes to login, staying alive (like Tesla app)
2. Face id
3. Sharing files with airdrop

From a purely phone standpoint, Pixel is the clear winner in my book. From a system perspective, nothing offers more cohesion than the apple ecosystem. My wife lives in the Apple world and it's just incredible to see how her laptop, phone and iPads all sync and update things like magic.

The reason I keep sticking to the Pixel:

1. Universal back 'button'.

I switched to the iPhone a couple of years ago, and got 20 spam calls. And immediately switched back to a Pixel.

I think you can send stuff (files and texts) between iOS and Windows with Localsend.

Pixel 9

God I'm so sick of seeing AI-generated text everywhere. If you have something to say, say it yourself

Pixel 9a

I had the iPhone 12 for 4 years before upgrading to the 9a and there are a few things differences to your experiences from mine.

OTP autofill from messages is a total coin flip. Sometimes it works, sometimes it doesn't. And when it does, why doesn't it automatically copy the code to the clipboard or mark the text as read?!

I actually prefer it doesn't assume the code goes into whatever app I currently have open because sometimes I get those codes via text while using my computer, but I do agree that it would be preferable if they were automatically added to the clipboard.

The app experience can be rough. Scrolling in the official Reddit app is clunky compared to iOS. 1Password fails to recognize the app I'm in 90% of the time. Some apps, like my Wells Fargo login page, have weird, ugly white bar at the bottom.

I've not had any issues with the official Reddit app. I use Google to store my passwords and it has trouble relating what's saved from a website to the app, but gives me an option to go into the list and pick something. And I do have some weird stuff like that white bar on some apps, but that's the fault of the developers, not the Pixel.

My non-Apple Bluetooth headphones, which were a constant headache on my iPhone, just *work*. It reinforces my feeling that Apple was making my experience worse on purpose.

I went through at least half a dozen different wireless headphones in the 4 years with my 12 and I only ran into issues with anything under \$50. So while you could be right, I also wonder if Apple makes the iPhone just very specific on what grade of Bluetooth they allow to work with their devices.
