Google or anyone with more information: **Is the replacement battery a completely new and redesigned model that addresses the root cause of the capacity reduction after 400 charge cycles, or is it simply a fresh unit of the *same old battery model* that caused the initial overheating concerns and will inevitably face the same software-imposed capacity reduction down the line?** I'm trying to understand if this replacement is a true long-term fix or just a temporary workaround.

Pixel 9 Pro

Help! Mobile network draining all the battery. <https://ibb.co/zWt7Xvnb>

Tried switching off all the scans and limiting network to 4G

**MacZausel** • 7mo ago**Tacky_17068** • 7mo ago

did you find the fix?

**Sad_Dare_5985** • 7mo ago

Pixel 9 Pro

Yes! By keeping the phone in flight mode. Also disabled all AI related system application

**doctor_ben** • 7mo ago

My son has my old pixel 2, and it stopped charging today. Multiple chargers, multiple cords, nothing works. Interestingly, with only one of the chargers, when left for 15 minutes, the phone port area becomes warm. Not with any others.

Any fixes?

We were planning on getting him a new phone for Christmas, we may need to bump up our timeline.

**gasparthehaunter** • 7mo ago

Top 1% Commenter

The fix is replacing the charging port:

<https://it.ifixit.com/Guida/Google+Pixel+2+Charging+Assembly+Replacement/103332>

[Skip to main content](#)[+ Create](#)**[deleted]** • 7mo ago

I love how you say this like it's super easy to replace for someone who doesn't have a small electronics soldering setup and lots of experience. It's not.

Pixel 6a

Hi,

I want to check, if my phone is affected by battery issues. At which point should I get this information on google support page? I confirmed my email, entered IMEI and selected my country of residence. Then it asked me about my Payoneer account. But so far I haven't got any information if my phone is affected or not.

**baboozle2** • 7mo ago

That means your phone is affected.

**NoPersonality1998** • 7mo ago

Pixel 6a

Yeah, you were right. I already received 83 EUR. And I'm from the country where 6a wasn't sold officially.

**AntiferromagneticAwl** • 7mo ago

So, what other devices have the same size as 6a?

**NoPersonality1998** • 7mo ago

Pixel 6a

<https://m.gsmarena.com/results.php3?>

WittyWiki • 7mo ago

Is it worthwhile waiting till after the 10 comes out to get a pixel 9a or 8a? I heard that new releases are one of the few times there are sales, but I'm unsure if that is only for the newest release or all phones.

neail001 • 7mo ago

Pixel 6a overheating after the 8th July battery patch?

Is anyone having the heating issue on 6a? I am watching YT on 360p, on portrait full screen (not the actual full screen) and it's heating up very much, the inbuilt battery temperature gauge is in yellow. Do we need a patch for the patch!! What the hell is google doing!

Pixel 8 Pro

July update on pixel 9 pro improved the battery dramatically. Normally at the end of my working day, at 4pm I would have ~25%-30% battery left from 100% charge. The place where I work is located in an area with terrible network coverage and most of the battery would go towards keeping the network up. Today I finished a day with 75% of battery left and that is an insane difference.

**Key_Alfa_3297** • 7mo ago

Since [r/GooglePixel](#) won't let me post it, even though I believe this is relevant, I'll post it here.

Full disclaimer, there is obviously a reason that Google pushed the update to prevent damage from phones exploding or catching on fire. I do not endorse repeating any of these steps and you are entirely responsible for yourself and any damage you may cause to yourself and others.

I just want to document that there is a way to bypass the recent battery management measures, but only for one charge, which I accidentally found out when wanting to reset my battery calibration by a full discharge. AFAIK this has not been documented anywhere before.

I am affected by the whole battery issue, my battery is at about 550 cycles. Therefore I got the update like many others.

Here is what I did:

Discharged my phone completely until it shut off and only the red empty battery icon would show up upon pressing the power button

Briefly plugged in a charger and pressed VOL- and Power to enter the bootloader, disconnected the charger as soon as the bootloader showed up

Chose Bar Code (since the white background drains the battery faster with the OLED display)

Waited until the phone actually shut off

Upon pressing the power button, the red empty battery showed up again, so I repeated steps 2-4

Now, upon pressing the power button, nothing happened (screen stayed black)

Plugged in a (USB PD/fast charge) charger, let the phone boot up and charge fully in one go

The phone fast-charged at old speeds and to the old max capacity (see below)

Here is what I noticed:

- During charging, in the battery settings, it wouldn't tell me anything about my degraded battery, I could even turn on/off the battery health optimization setting (which was greyed out before)

[Skip to main content](#)[+ Create](#)

show my battery being "dead" while charging.

- at 100%, it would still charge physically with quite a high current (1500-2000mA) indicating to me, that it definitely pushed way past the adapted 100% value (which probably is like 50-60% of the actual attainable capacity by the feel of it, don't quote me) and charged up to the actual max capacity like it used to before the update
- I don't know how long it took since I left my phone overnight, but in the morning, the final charge voltage was way higher than the updated used to be. Please don't quote me but something in the ballpark of 4.35V original max voltage vs. 4.1V after the update - and now it was at 4.35V again
- After unplugging the charger, the battery management kicked back in, reverting the briefly gained "freedom" back to the after-update-state (battery warning, greyed out health opt. setting, exclamation mark on the battery icon, etc.)
- After one day of use, I can confirm that my battery still holds up. After a pretty average workday I am now sitting at ~60%, whereas the past days since the update, my phone would be almost drained (~20%) - which really shows to me how the battery capacity is extremely impaired now

I now expect that my phone will again behave normally (like after the update) now again. If there is any odd behaviour, I will post an update.

Also, I'll try to get an official new battery on iFixit soon (if I manage to buy one when they are not out of stock) and replace it to permanently fix the issue.

Cheers

[+ 1 more reply](#)

DarthGlazer • 7mo ago

I broke my pixel 7 Screen. currently debating the following deals i found:

New pixel 7 - \$250

Pixel 7 Pro - 350

Pixel 9a - 500

Pixel 8 Pro - 600 (includes a pixel watch 2)

or just splurge for pixel 9

I don't care too much about the phones - just need an nfc, and i want it to not feel old in 3 years. the pixel 7 did a good job of that until i broke the screen. anybody got any preferences/recommendations?

Pixel 10 Pro

I have the same exact phone mentioned in the link you posted and I have experienced no such issues, FYI.

**New_Archer_7539** • 7mo ago

Don't. Go into developer mode and disable auto updates especially if you are using a phone in the Pixel 9 gen and wait until ALL the bugs are fixed. I had to get my 9 XL exchanged thru Verizon and this fresh start has me scared to upgrade from 15 to 16.

**TheBear8878** • 7mo ago

Don't do it. Basic things that should work no longer work. Sometimes I click the home button and nothing happens.

**AffectionateStep3218** • 7mo ago • Edited 7mo ago

Should my mom get the Pixel 9 or the 9 pro? [edit: got her the cheaper one]

She wants an Android phone which has a very good camera and no bloatware. I originally thought 9a would do but then I've read that its modem (inherited from the previous Pixels) struggles when the signal is low (Perhapse someone from Czechia can share their experience). For that reason and because the non-A models have a camera bigger sensor, I thought buying the Pixel 9 instead would be worth it.

But she wants to buy the 9 Pro, because it has the 5x camera. I kinda feel that paying 30 % more money for that is not worth it (630€ vs 800€). What do you think?

**Wattenloeper** • 7mo ago

I've read the pro models (and ultra models) can also use additional ai features.

**AffectionateStep3218** • 7mo ago

Thanks for the reply! She just needs a camera, browser and Signal/Whatsapp, so I think buying the cheaper one was a good idea.

[Skip to main content](#)[Create](#)

network, there is an audible alert noise, it kind of sounds like a Zoom call alert or a slack huddle call alert. Its like a bubbly little repeating noise. It happens when the phone is on vibrate or no noise, and it happens on DO NO DISTURB mode. I have turned off Adaptive Network and the setting about alerting for high quality wifi networks. I have Googled this and tried following the directions people post, but they are outdated and I do not even have the options they say to turn off.

I am begging someone to help me turn off this fucking notification noise. It is driving me crazy.

**arairia** • 7mo ago

Is Pixel 8a still a solid phone? I'd like to buy a cheaper Pixel, I will wait some more time for 10 to come out and hope to find second hand nice quality 8a's. I'm from a smaller country and GDP isn't really big, so I'm basically always in terms of purchasing power buying older devices. So, yeah, I think I will get used 8a in nice quality for like \$240 when prices drop more after 10 release.

**Jet_Xcountry** • 7mo ago

Okay I placed an order last night for the 8 pro which came with the pixel watch 2 and a case for like \$640. But they just put the 9 pro xl on sale for \$800. Is it worth the extra money and loss of the watch? Upgrading from my 7 pro that I cracked the screen on

**GWindborn** • 7mo ago

Pixel 9 Pro

I know they flag these for iPhones for search purposes on Amazon, but if I have a Pixel 9 Pro with a Magsafe case (mainly used for a magnetic popsocket at the moment), would an iPhone-marketed Magsafe backup battery this still work? I'm looking for one on a Prime deal around \$20-\$25 but they all say they're meant for iPhone.. I'm not super familiar with Magsafe products so I don't know if there's something about them specifically formatted for iPhones somehow or if it's just for search results. And if not, can someone suggest a similar product at a similar price point?

**MacZausel** • 7mo ago**jfatal97** • 7mo ago

Hi guys I'm a newbie in the pixel environnement . I bought my first Pixel (Pixel8) last november and was bummed to see that google did not port battery cycle info on older pixel after the update.

Today I was scrolling reddit when i found out this feature was available on Android 14 and was removed later on .

Is that True ?

[Skip to main content](#)[Create](#)

only, at 20% it enters an extreme power savings mode which converts the phone to a dumb phone basically. In addition they guilt trip you if you use wireless charging. (Along the line of "You use more energy if you use wireless charging rather than charging with a cable.")

I'm not shy of changing default settings but many people don't change them for a variety of reasons. For them this phone can hardly be a good daily driver if they need to charge multiple times a day, or am I wrong?

**One_River2180** • 7mo ago

With the 6a battery program plus \$75 trade in and the P9A being on sale for 3 more days at \$449, would you say this is the best time to buy?

I know that's a pretty good deal (\$225 before taxes), but of course I wonder if after the 3 days are up, will there be a better deal on the 9A or on another model....

[3 more replies](#)**PMMeBootyPicz0000000** • 7mo ago

[Pixel 9] Is there a way to quick toggle the Charging Optimization feature? Would like to charge to 100% at times without having to dig through the Settings menu.

I am coming from the Sony Xperia IV 5, and that phone had a notification pop up every time I charged my phone, allowing me to choose to charge to 100% or keep the default charging to 80%.

Is there a similar feature for the Pixel 9? I haven't been able to find a shortcut or notification setting to toggle charging optimization on/off.

**Nordic18** • 7mo ago

Hi there - I'm coming from an iPhone 15 pro max to the Pixel fam.

Interested in the pro or flip. Any advice if I should wait for the 10 or get a 9?

**Soorbus** • 7mo ago

After pixel 7a battery swolled up to dangerous levels within two weeks (1 year old phone) and now still waiting for reimbursement (Italy not covered by battery replacement) I had to buy a nothing phone 3a as it seemed quickly a good substitution; but now regretting as how unusably big it is; will the pixel 9a be worth the extra money and finally come maybe without battery issues? Will I be looking to the same problem in a year seeing how plagued by battery issues the Xa line seems to be?

[Skip to main content](#)[Create](#)

about the 1-year-old model?

[taybalo](#) • 7mo ago

I own a Pixel 6a covered by the Battery Performance Program which would give me a \$150 voucher in the google store.

In my country (Austria), the Google store trade-in program is giving me 150€ if I trade in my pixel 6a for a pixel 9.

Does anyone know if I can combine both?

Thank you

[googol_r](#) • 7mo ago

Okay, so I know the Pixel 9 Pro XL with the Tensor G4 isn't the absolute fastest chip out there — I get it. But honestly, I just want to experience the premium Pixel feel for once.

I'm upgrading from a **Huawei P9** (yep, 2016 vibes), so pretty much any phone from the 2020s is going to feel like a major upgrade. That said, with how often these Pixel phones go on sale, I've found a few tempting deals: the **Pixel 9 Pro XL (256GB)** for **£899**, and the regular **Pixel 9 Pro in Hazel (512GB)** for around the same price.

My usage is pretty simple:

- Light gaming with my brother — mostly **Roblox**, **Rivals**, **ER:LC**, **Asphalt 8**, and a few multiplayer games here and there.
- **WhatsApp** is basically always running.
- I'm not super into photography, but I do take everyday pics.
- And most importantly: I plan to use the phone for **around 5 years**.

I get that Tensor chips aren't breaking benchmark records, but with the clean Pixel experience, great software support, and the frequent discounts — it feels like a solid long-term choice.

What do you guys think? Worth it?

[5minuteaccount](#) • 7mo ago

I've noticed the motion sensors in my Pixel 9 don't seem to be working lately. Fitbit isn't working and neither is my compass app. Is this a known issue?

[ProfessionSavings792](#) • 7mo ago

[Skip to main content](#)[Create](#)

Hi all, the question is self-explanatory. I am afraid of the Pixel 6a situation. I heard people saying they got their phone marked down as a bad batch, tried replacing the 400+ cycle battery by official channels and that now the phone is actually even worse than before, that they should have left it to die a natural death. It's worse to try to refurbish it for real? Because I was going to do it, but people said it that after the battery replacement now the phone is actually worse!

Other options are still keep using it or just change it for the 9a (with a lifespan of roughly 2 years?)

**Kornikus** • 7mo ago

Hello, I have a weird issue with my pixel 6.

I can't charge it with an USB-C/USB-C cable but it works perfectly with an USB-A/USB-C cable ...

Anyone has an idea of what is happening ?

**BackSundew3** • 7mo ago

Charging optimisation stopped working on my Pixel 9 Pro since June. Does anyone know how to fix it? I've tried restarting my phone and toggling the setting.

**cy_kelly** • 7mo ago

I've generally enjoyed the Google Pixels I've had, and a Nexus tablet before that, but I've had a fairly lousy experience with my Pixel 6a. The charging port needed repair, the proximity sensor likes to stop working for a while, then this recent update related to battery health tanked the battery life and now it's my problem to get the battery fixed. This software update also seems to have triggered more issues with the proximity sensor, and when I tried contacting support, I got stuck with somebody who typed about 4 WPM and didn't understand what I was saying. Endlessly frustrating, and if I was prone to making snap decisions, I'd have a used iPhone in my hands right now.

That said, maybe I just got a dud. Until a few hours ago I had my heart set on a Pixel 9a. What do you folks think? Are these known 6a issues that I'm probably just not going to have an issue with if I roll the dice again? I even like my Pixel 6a well enough when it's not being difficult, so I don't want to make a snap decision out of spite. Appreciate any thoughts you might have!

**Section_80** • 7mo ago

Just installed the update now my Bluetooth calls don't work in my car

Bluetooth audio is fine, restarted phone. Restarted car.

[Skip to main content](#)[Create](#)

Recently I noticed that my Pixel 8A battery drains so fast when on standby.

I thought it was a one time thing when I first noticed that my battery drained 10% of its battery (100% to 90%) in just a matter of 6-8 hours on standby (on extreme battery saver mode), but now I'm sure after checking multiple times.

Does anyone has this issue as well? I don't know if this started with the recent Android 16 update, but I noticed this fairly recent.

- My battery health by the way is at 99% capacity for anyone curious.
- WiFi, Bluetooth, Mobile data were all turned off during the times that I checked.

ActiveFirefighter393 • 7mo ago

What should I do regarding the battery debacle with my 6a? I live in the UK so can't use the google Fi store benefits :(

bundtkate • 7mo ago

Does anyone know if the physical Google Stores can verify if your 6a is eligible for the battery program? My husband's seems to be impacted (update has limited his battery) and we purchased in 2022, but filling out the form said I needed to wait up to 3 weeks to determine eligibility. His phone is in rough shape after the update and I'd really like to get the credit (and a replacement) sooner.

trilogee • 7mo ago

Pixel 9 Pro XL

Anyone with 9 pro XL having massive battery drain issues lately?

Link2999 • 7mo ago

I just purchased the Nothing 3a this morning since it's been out of stock in Blue for months and just came back. Was originally holding off to update my 6a, but found it just updated overnight by itself. Phone was at 74% this morning after being charged all night and I found it discharging while being plugged in. Unplugged it and found it was discharging a lot faster too. I lost around 25% over about an hour. That sealed the deal for me. Took the \$100 option and it was sent within an hour. I would have gotten a 9a, but I saw Google also limited the battery on that one starting at 200 cycles with it slowly getting worse over time.

[Skip to main content](#)

Create

update kills it. 50% after 3 hrs from 90%. Or can I use the pixel 9?

Also, what are peoples thoughts on CC insurance covering this? This is a manufacturer defect and requires replacement.

**aggie_fan** • 7mo ago

Pixel 6a

I want to maximize the life of my new Pixel 9 XL's battery, I am considering two options. Both use the 80% limit function.

1. I constantly charge my phone with the 80% limit. My phone will spend 18-23 hours per day plugged in but capped at 80%. Most days, my battery does not dip below 60%.
2. I don't charge my battery until it reaches around 30% and then charge it to 80%. Most days, I need to charge my phone while in bed (and some evenings will need a few mins of top off to charge from 30% to 50%).

What do you think?

**not__a__redditor** • 7mo ago

Where to get the best deals for pixel 9 in USA ? Since pixel 10 is about to come, what should be the best deal I should go for ?

**GingersaurusRex** • 7mo ago

The battery on my 6a was working fine two days ago. I only needed to charge my phone twice a day, If I wasn't using my phone, my battery wouldn't drain. The update goes through, and suddenly my battery is draining three times as fast as it did the previous day, and it is running out of battery and dying overnight while I'm not using it.

My phone still works great otherwise, and I was not planning on getting a replacement anytime soon, but the money reimbursements sound like they will be an easier option than receiving the battery replacement, but I do have questions about the way the program works.

1. If you choose battery replacement and you live in the US, does it assign you a location to have your battery changed? Is there a waiting list, or is it pretty straight forward?
2. My reimbursement options are \$100 cash, or \$150 Google Store discount. In the past, I've purchased new phones from Best Buy with warranty plans, and those plans have saved me from damages in the past. It looks like the 2 year Preferred Care through the Pixel Store is cheaper than the Best Buy warranty, but choosing the Pixel store means I won't have a brick and mortar store to bring my phone into if it does get damaged. Does anyone have any experience using the Preferred Care program when your phone was damaged? Did you have to mail in the broken phone? How fast and reliable was the service?

[Skip to main content](#)[Create](#)

drop. Everything works fine it's just aesthetics. I'm trying to do the math on whether it's worth it to replace the screen and trade in or just see what the trade in price is with a cracked screen? Has anyone traded in a cracked phone before?

Thanks

mpattonmusic • 7mo ago

Hi everyone,

I'm 15 and I am using a 6A with a faulty battery and I was offered a \$100 "rebate" for my phone. Only problem is that you have to claim it using some app called Payoneer. I can't use it because I'm not an adult. And neither of my parents can successfully register on the app because it requires you to upload bills that have certain information on them (my parents' bills don't have all of the necessary information printed right on them because they're digital). I'm now left with a totally nerfed battery and no rebate. What can I do? I've reached out to Google Support but they're stalling very hard by deferring me to a "specialist" and I have a feeling they aren't going to answer me.

Please help!!

picante-x • 7mo ago

I own a Samsung Galaxy S24 Ultra. Should I upgrade to a Google Pixel 9 Pro XL or wait for the Google Pixel 10 Pro XL?

Will Google give the same \$800 promo to the Google Pixel 10 Pro XL?

I'm thinking of switching to Google Fi, Cricket, Visible+, or H2O.

keeldude • 7mo ago

Has anyone had any luck with the battery replacement? The only approved shop near my house won't answer emails or voicemails relating to the battery fix so I suspect they are inundated with similar requests? Google has definitely lost me as a customer over this. Should be more than \$100USD for the hassle.

Also Google as a tech giant is too monopolistic and despite claims of ethical privacy practices, their model of business is the antithesis of that. Too deeply integrated into Android and browsers and search engines. You can switch and avoid them, but it sure ain't easy. Rant over lol.

Key_Gold8301 • 7mo ago

Hello I got a refurbished pixel 7 pro back at the end of February and it's the best phone I've ever had. But in the last month the battery health went from 95% to 90%. I have no idea why or how. I don't have any

[Skip to main content](#)[Create](#)

do not want to replace the battery so soon, but I also don't want to charge it so much. Pls help :(

Electrical-Stock-868 • 7mo ago

Battery was fine before but after July update it is draining really fast. Is there anyway to go back to the previous version?

Electrical-Stock-868 • 7mo ago

Google July update draining 6a battery much more rapidly than last month. Anyway to roll back to the previous version?

ChamperTheTntcl • 7mo ago

Pixel 9 or Pixel 9a?

For the past two years, I've been using a Google Pixel 6a, but after recent battery problems, I decided to buy a new model. In total, with all discounts, I can buy a Pixel 9 for \$530 or a 9a for \$350. Is it worth the extra cost? I don't care about any of the specs other than the durability of the phone itself. I rarely take pictures, don't play games, and don't care about battery capacity. I just don't want to fall into the same trap as with the Pixel 6a.

wateryourplant553 • 7mo ago

I cannot take my 2.5 year old Samsung anymore. I have to restart this thing 1-2 times a DAY. Ready to go back to pixel and wondering if the 8pro deal with the watch and case is worth it right now considering that the 10 will come out next month and the 9 might go on sale? Anyone have suggestions?

Hootie4u • 7mo ago

I have a 6a that has the battery issue, which can either give me a new battery or a rebate of 150. I can also get 75 as a trade in for my phone. I tried to break down my thoughts below, but really not an expert here, and can use others advice.

If I take the deal now:

- I get ~\$225 immediate value (battery discount + trade-in).
- Phone available right away.

If I wait until late August:

- I can get the latest hardware (Tensor G5, possibly telephoto camera, improved battery/charging)

[Skip to main content](#)

Create

- New promotions (gift cards, trade credits) may appear, but cannot be guaranteed.

Other option keep current phone and get the battery replacement option.

mfoxin • 7mo ago

Pixel 9 can't access battery optimisation menu

I set the charging to limit to 80%, and now the menu won't open again. It keeps crashing and going back to the main battery menu.

Does anybody know what I can do?

totallytim • 7mo ago

The battery of my Pixel 6a started draining like crazy after the latest update, even though I'm only 290 charging cycles in.

Google announced that the battery life reduction changes would come into effect after 400 cycles. I was hoping I could keep my device for at least another year. But currently I already need to charge it once a day with next to no use. I feel like before it lasted easily 2-3 days.

Is anyone else noticing degraded battery performance even though they haven't reached the 400 charging cycles milestone?

colonel2link • 6mo ago

My Pixel 7a has a visibly swollen back and dies immediately upon reaching 20%. However, my IMEI shows as intelligible for the extended battery replacement program (it's also still under warranty). Chatted with support and they said they escalated my case to a dedicated team that would get back to me within 24-48 hours. That was nearly 100 hours ago. Any ideas?

I'm looking into the Battery Performance Plan for my 6a, and there's an option for a USD \$452 cash payment. Does it really come as a flat cash payment with no restrictions? Usually there are restrictions saying you can only spend it again on the same company.

(I live in Australia if our national law has anything to do with it)

NGL, any other product with a probability to explode and burn down your home or business or anything else, would prompt an immediate recall and full refund.

Also, using "payoneer" is surprisingly dubious for a company as large as Google.

I suspect these will be eventually a forced recall but only after it causes substantial harm with a major settlement.
