 **tantalor** • 4mo ago

Genuinely surprised he doesn't have any mitigation plan for this; it's bound to happen eventually when you are abusing these devices.

Having a bucket of sand handy, and a fan to ventilate the room would be a good start.

  **ThatKidDrew** • 4mo ago

maybe just not continuing to touch it and standing around it even, he handled this so brazenly

 **Dos-Commas** • 4mo ago

**Lehmanite** • 4mo ago

Whenever he does a bend test, he never seems worried about getting glass fragments in his hand if it shatters.

**PapaTua** • 4mo ago

Pixel 8 Pro

Did you see his callouses? Bro's skin is thicc.

1 more reply

**Tof12345** • 4mo ago

zack makes it a point to tell everyone how fucked up his hands are. afaik, he can't even use the fingerprint sensor on most phones because his fingerprints are fucked up. i don't think he gives a shit what happens to his hardened ass hands.

1 more reply

**unibrow4o9** • 4mo ago

Pixel 10 Pro

Yeah I was thinking the exact same thing, have like a fireproof box on hand he can throw it into or something.

**speedymaus1** • 4mo ago

Its the first time it happened in 10 years

**InquisitorMeow** 🍰 • 4mo ago

See the thing about precautions is that you take them even when accidents haven't happened. Thats like a boat captain saying no one needs life vests because the boats he's driven for 10 years never capsized.

**green\_link** • 4mo ago

Pixel 8 Pro

if he did that then he wouldn't have a sensational video of a phone "exploding" (aka Thermal runaway) that will now be picked up by every tech blogs AI writer to write an 'article' to locked behind a subscription

[Skip to main content](#)

**engineer-everything** • 4mo ago

He's not an engineer or a qualified repair person, despite his collaborations with ifixit. Most of the time he legitimately has no idea what he's talking about.

I'm actually shocked this hasn't happened earlier given how he destroys devices. He's just gotten lucky, I guess.

For anyone wondering, standard practice is to have a bucket of sand next to the repair station to smother the battery if it does ignite like in the video.

**TheresTheLambSauce** • 4mo ago

Genuinely curious but what's some stuff he's been wrong about?

I don't watch him a lot any more but a lot of what he says seems to make sense on the surface at least

4 more replies

**sharplight141** • 4mo ago

I'd assume he at least has a CO2 extinguisher somewhere in the building for electrical fires

"Yeah, you really shouldn't bend the phone completely in half and then rock it back and forth over and over"

**Conscious\_Drive\_6502** • 4mo ago

Compare a Samsung foldable review, he does the same thing and they're fine

7 more replies

**MachineSubstantial63** • 4mo ago

He has done this with every foldable for as long as foldables have been a thing and never has anything remotely close to this disaster ever happened.

Leave it to Google.

Google bringing back burner phones.

**Gaiden206** • 4mo ago

Top 1% Commenter

That's definitely a fail but I feel like it's going to be one of those Nexus 6P situations where Jerry [easily snapped that phone in half](#) but you never saw any real life complaints from regular users having their 6p break in half in everyday use.

**golgi42** • 4mo ago

Pixel 9 Pro

This is what put him on the map. Made me stressed over my 6p buy. Never had an actual issue.

**Ph0X** • 4mo ago

G1/NS/N5/N5X/P1XL/P2XL/P3/P4XL/P5/P6P/P7P/P8P/P9PXL/P10PXL

none of his tests are realistic or useful. Flame to the screen? Honestly it's just weird entertainment, kinda like the "Will It Blend" channel, people just like seeing expensive shit getting destroyed.

**OkNewspaper6271** • 4mo ago

Pixel 8

I think its gives a general idea of how one phone stacks compared to another, but none of the tests are remotely realistic

**San4311** • 4mo ago

tbf the bend test can be. I've seen how people care for their electronic devices.. some people \*will\* sit on them and that can be comparable to a bend like this.

[+ 2 more replies](#)[+ 1 more reply](#)[+ 2 more replies](#)**iLikeTurtuls** • 4mo ago

That's generally how that works. When was the last time you saw a bent phone, I always see phones break from the antenna bands, ironically on iPhones.

[Skip to main content](#)[Create](#)

testing for iPhone Air. I have been a Pixel user since 2018 and at that time Pixels were pinnacle of cameras and built quality and now in 2025 Pixel is providing subpar hardware with a performance comparable to 2 years old chipset. This sub is very defensive to any criticism but the fact is if Google wants to remain in the phone market, they have to step up their game. I was planning to upgrade my P8P to 10XL but after reading the reviews and poor trade-in, I backed off.

**WatchfulApparition** • 4mo ago

Pixel 10 Pro XL

Pixel phones have never been the pinnacle of build quality.

**myownworld-123** • 4mo ago

They're priced as if they are tho to be fair

**ZeroAnimated** • 4mo ago

That's why I just buy A-series once they go on sale, hard to get mad at a \$200-300 phone not being a top performer.

[1 more reply](#)**alexpopescu801** • 4mo ago

The pricing does not automatically mean that a product is indestructible. It's an *expectation* that if the product price is high, then it has to be durable, but we already know this is not happening, every year we see this does not happen.

Pixel phones have become overpriced for what they offer and this should be more of a headlines than anything else. From Pixel 7/8 Pro to 10 Pro, they kept more or less the same hardware, but the price kept increasing. The price went from 900 to 1200\$, absolutely unbelievable! +33% increase!

As for the fold, it's a very expensive piece of hardware, for a fragile product. When you can literally destroy your product with just one finger (cutting the display with the nail, accidentally even), I fail to see how the product can be considered anything else other than "extremely fragile". Possibly the unlucky thing here that has to be a design error is the alignment of the edge of the battery with the antenna line, incase someone tries to bend the device the battery will be in a bad shape, but really chances for people to crazily bend their device so extreme like this (by 90 degrees) are less likely to happen, while the screen damage is something real that could happen to anyone.

...over than Samsung and Apple. It had the latest "cheap" pixel

1 more reply

[deleted] • 4mo ago

Also, it's the SAME weak point as the last two folds...and a similar weakness to the iPhone 6 many years ago. Not that anyone would purposely bend there phone as the spot, but if left open and sat on, that section could potentially break and I would hope that what happened here doesn't happen to the consumer

yourblunttruth • 4mo ago

the issue lies within the culture. Criticizing objects that you paid for made by gigacorporations is only natural, it shouldn't be seen as personal attacks as if your identity was attacked. In some cultures it's pretty normal to do this, it doesn't mean you can't genuinely appreciate something or that it's inherently bad, even so I would say the more you like something the more you would like for it to strive to do better. At the end of the day what is even the point to debate stuff if it's just "perfect" in its own state

Wow.

Odd days: "heheh I can't wait for his iPhone Air stress test that won't last at all"

Even days: "This channel is fake and totally unfair lol my Pixel is fine shut up"

[Skip to main content](#)[Create](#)

(T)

it's crazy how mobile phones can have fanboys like this.

**gamefreak95** • 4mo ago • Edited 4mo ago

Also the fine\* sand gets stuck in the hinge? So how dust proof is this phone really compared to the z fold 7? (I'm on the fence between these two phones and was leaning towards the pixel because of the bigger battery and ip68 rating 🙄)

-

**phero1190** • 4mo ago

Vivo x200 Ultra

Dust proof is for the internals of the phone.

-

**gamefreak95** • 4mo ago

I see, would that imply that the dust wouldn't get into the internals after getting into the hinge? (I don't expect you to have all the answers ofc, but I don't think Google is going to answer these questions at the moment 🙄)

— 5 more replies

— 2 more replies

**Swageroth** • 4mo ago

I honestly don't understand how they managed to get an IP68 with that hinge. Did they only test it completely unfolded or something? The hinge is the place where it actually matters to because you can just blow dust out with compressed air anywhere else, absolute worst case being you open it up to do it. Getting it out of the hinge would be a nightmare even assuming it doesn't get ground into the screen.

I mean he kept trying to bend the battery. What was he expecting?

**Izan\_TM** • 4mo ago

he was probably expecting something more similar to the samsung fold 7 bend test

**Darkpurpleskies** • 4mo ago

Pixel 8 S25+

The fact that the fold 7 didn't break and passed is insane.

**Izan\_TM** • 4mo ago

I'd say the fold 7 passing should be the expectation based on the price point. Same with the pixel actually

**San4311** • 4mo ago

Pixel especially given its been the same for 3 phones now. As he said, insanity to do the same thing and expect it to not break this time.

**RandomCalamity** • 4mo ago

He does the same bend test to other major phones, and they don't go up in smoke.

[+ 19 more replies](#)**Fabianos** • 4mo ago

Watch the apple air bend test

**ByteSizedGenius** • 4mo ago

In fairness the iPhone air is one of the only phones currently on the market using a metal can instead of a pouch cell. In a couple of years it'll probably be pretty ubiquitous but until then it's not really apples vs apples.

[Skip to main content](#)[Create](#)**SelectTotal6609** • 4mo ago

Didn't he bend the iPhone Air like crazy? Imagine if he did the same thing to this fold lol

**PeakBrave8235** • 4mo ago

215 pounds of pressure directly at a single point and it still WORKED, with the battery intact

For it not to start smoking, you know, like all the rest he's tested?

**icatsouki** • 4mo ago

to not fucking explode lmao what

17 more replies

**dbxp** • 4mo ago

He bent it along the fold which then caught the battery, the battery could have been recessed from the edge to avoid the issue

2 more replies

**green\_link** • 4mo ago

Pixel 8 Pro

he didn't bend the battery, you can see at 8:45 after the fire the break runs right along the hinge and beside the battery. it was the back and forth that caused internal components to poke the battery. just like what can happen to any broken bent phone

**zenithtreader** • 4mo ago

He was expecting it to not be bent easily like all other ultra thin and foldable phones released this year.

Nothing else burnt this year, either, even when bent.

But I guess that's too much to ask for in a \$1600+ device.

Google Pixel Team: Guys, for next year let's use the other Jimmy

**i\_hate\_budget\_tyres** • 4mo ago

Are batteries a Pixel weakness? Google has a history of issues with multiple devices.

Just had to get the battery replaced on my 6a by Google because it could set alight charging. I noticed with the replacement battery the device runs way cooler.

**ishamm** • 4mo ago

Pixel 10 Pro

Also "exploded" is not strictly true even, sure, it ruptured and smoked (dangerous), but there's no explosion "caught live on camera".

Make of that what you will

 **[deleted]** • 4mo ago [16 more replies](#)**Haunting-Effective15** • 4mo ago

Nice phone to have when you're all out of smoke in the middle of an extraction mission.

[Skip to main content](#)[Create](#)

The battery is just icing on the cake.

**Paxelic** • 4mo ago

Bro, there's no way people are in here trashing on JerryRigEverything for this stress test.

Goes to show how many tourists we've had in recent years.

Yeah the battery was bent and it blew up, no shit. But that isn't even meant occur at all, as a critical failure. No other phone has blown up.

You jam your phone into the car door and you've made a homemade IED? Can we not use our brains anymore?

2 more replies

**PapaTua** • 4mo ago

Pixel 8 Pro

Wow. The level of cope in this thread is remarkable.

JerryRig does the same tests on every device. His goal is to try and break the device. Some survive better than others. Some, like the new Pixel Fold, fail *spectacularly*.

That's it. You don't need to take it personally. I'm a huge Pixel Fanboy, but I also regularly watch his channel. He didn't do anything extra, it just broke more catastrophically than other devices.

6 more replies

**Fade\_ssud11** • 4mo ago

**sav86** • 4mo ago • Edited 4mo ago

I'm surprised he doesn't have a pair of tongs to chuck it into safety box for when a battery has a thermal runaway.

Not defending this phone, but I kind of don't know what he was expecting by bending it that extremely.

The contents of the battery are going to be subject to some extreme amounts of pressure with those bends. Beyond that the state of the phone prior to this, the phone was absolutely cooked.

That being said the Fold 7 did extremely well under the same kind of abuse.

I honestly stopped watching JRE because its tech torture porn in a vacuum, along with being pitched to buy a knife at the end of it.

**[deleted]** • 4mo ago
