former-ad-elect723 Pixel 6 Pro

The Pixel 10 is a good phone.

I've been daily driving a Pixel 6 Pro I grabbed refurbished off Amazon for \$220 since April 2025, and even 4 years after its release, it still runs smoothly, looks great, and takes killer photos. Even refurbished, it still outperforms a lot of newer phones. The only weak spot is the battery, but I still get 4–6 hours of SOT and a full day with normal use. Once I swap it out, it'll feel brand new again.

That's why the wave of Pixel 10 hate feels way overblown to me, because if my old 6 Pro still feels like a flagship, the 10 is definitely not the flop people are making it out to be. I definitely believe it can last for the full 7 years, even if it's not performance-focused.

The main complaints are the same:

- "Tensor G5 didn't do anything."
- "Over \$1,000 for a Pixel?"
- "Not a real flagship."
- "Can't compete with iPhones or Samsungs."

Yeah, the Pixel 10 Pro XL is expensive, I get that. But the features it actually brings are useful, and for most people, that's more than enough. If you want peak performance for gaming or heavy multitasking, get an iPhone, S25 Ultra, or OnePlus 13.

So when people say the Pixel 10 "isn't a flagship," I don't get it. Premium build, gorgeous display, long-term support, unique AI tools, and a camera system that's still among the best in the game, that's a flagship.

Not everything's perfect. Some users report Android Auto freezing, battery health limiting charging speed after cycles, and the base model reserving ~3.4GB of its 12GB RAM for AI tasks. Valid concerns, but they don't make the whole phone trash.

Calling the Pixel 10 overpriced trash just because it doesn't crush Apple in benchmarks or because the Pro XL is expensive is an overreaction. **Not every phone has to chase raw specs.** Some people just want something reliable that nails the basics while actually trying new stuff.

I'm not a fanboy, I'd happily switch if Pixel didn't work for me. I just call it like I see it. Google isn't chasing performance for performance's sake; they moved away from Qualcomm to push on-device AI, and for the most part, they've nailed it.

If you want a phone that excels in everything, consider a different phone. Pixel isn't for you. Google has repeatedly said the focus isn't on pure performance; there's a reason they moved away from Qualcomm with the Pixel 6: to push advanced on-device AI. And for the most part, they've nailed that goal.

Nobody buys a Pixel solely for the hardware. Hardware matters, but software is what defines Pixels. The Pixel 10 makes the most of the hardware it has, and it shows. Nobody is even forcing you to buy a Pixel. You choose to buy one. There are other choices available.

If my \$220, almost 4-year-old 6 Pro still feels like a flagship in 2025, then a brand-new Pixel 10 sure as hell isn't the garbage people are making it out to be.

if people pay 1000+ for one they are bound to be disappointed. i got mine for 500 with promos and its great. then again i'm not the type of person who buys phones as a hobby.

**KJSS3** • 5mo ago

Ya 412.76 for me. But 1000 is still the cheapest pro flagship.

[+ 3 more replies](#)[+ 7 more replies](#)**mocitymaestro** • 5mo ago

My Pixel 8 Pro (which I'm sure is a refurb as it replaced a P8P that died earlier this year) is starting to do some weird stuff (randomly dropping Wi-Fi), so I'm looking at the Pixel 10.

**speedster_irl** • 5mo ago

Mine, starts shaking when I split screens with notes and calculator like Parkinson shaking, go give it a try and let me know if I'm the only one

**former-ad-elect723** **OP** • 5mo ago

Pixel 6 Pro

Yeah, the Pixel 10 has a better modem and SOC than the Pixel 8 Pro, so it should fix those issues. The Pixel 10 is a good choice, although it may not be as big an upgrade as the 6 Pro to the 10 Pro, but still worthwhile nonetheless.

[+ \[deleted\]](#) • 5mo ago**mocitymaestro** • 5mo ago

I usually skip a year or two. I went from the Pixel XL to the 3 XL to the P6Pro to the P8Pro.

If I still had my original P8Pro, updating to the 10 would be a no-brainer, but I'm leaning towards upgrading anyway. May wait for Black Friday.

[Skip to main content](#)[+](#) Create Pixel 6 Pro

Yeah, that makes sense. Waiting for a sale is smart. The 10 is a solid upgrade over the 8 Pro, but it's not as dramatic as some of the bigger jumps. Black Friday could be a good time to snag one.

 1 more reply 2 more replies**Substantial_Boiler** • 5mo ago

Another big problem with the entire Tensor lineup is that battery life still isn't good. Efficiency is still bad compared to the flagship competition, leading to worse battery life at the same price tag.

I also have no idea why Google chose to downgrade the GPU. They could've chosen something like an Immortalis and get very close to class-leading.

**former-ad-elect723** OP • 5mo ago

Pixel 6 Pro

Fair point on efficiency, I'll be honest, my 6 Pro doesn't last a full day unless I baby it. But that's also a 4-year-old battery, so I don't expect miracles. Still have yet to replace it. From what I've seen, the 10 is at least holding its own with normal daily use. As for the GPU, yeah, it's not top-tier, but Google clearly isn't chasing raw gaming power. They're putting their chips into AI and camera consistency instead. If someone wants max frames, Samsung's right there.

**Substantial_Boiler** • 5mo ago

The Pixel 6 never had good battery life compared to similarly-priced competitors, even from launch with a fresh battery. Same for the Pixel 10 series, the battery life isn't good when you look at the competition.

GPU not being top-tier is an excuse for something else too. Local AI models are usually run separate from the GPU, like on the NPU, and a lot of image processing comes from the ISP and CPU itself. In fact, if Google were to use an Immortalis and utilize it, they would've yielded better results. It doesn't take a lot more die space.

 2 more replies 1 more reply**Diligent-Move18** • 5mo ago

I just upgraded from 6 Pro to 10 Pro. The initial feeling is the 10 Pro is much smoother and responsive. Will see if my happiness holds.

[Skip to main content](#)[+ Create](#)**horatiobanz** • 5mo ago

Top 1% Commenter

That basically proves its phone of the year.

[+ 1 more reply](#)**former-ad-elect723** **OP** • 5mo ago

Pixel 6 Pro

Hopefully it does. Even though I don't have a 10 Pro, it's definitely an upgrade over the 6 Pro.

**JoshuvaAntoni** • 5mo ago

Dear Op, i do understand what you're saying

We dont need more performance but at least google should give more battery life right?

How can we get the worst battery life and worst performance at the same time and still call it a good phone for the flagship prices we are paying?

(also with choppy video cameras as per reviews)

That is simply not justifiable

https://www.reddit.com/r/pixel_phones/s/0PTHs4kUrL

For example, look at the post and see how different is the battery life, of course we wont be getting 14 hours in mixed usage, maybe 5-6 hours, and that is simply unlike any flagships

**former-ad-elect723** **OP** • 5mo ago

Pixel 6 Pro

Yeah, I get the battery concern, my 6 Pro definitely doesn't last a full day unless I baby it (but then again, it's an old battery which I have yet to replace), so I can see why people are worried about the 10 series. That said, from what I've seen, the 10's optimizations and bigger battery should help with efficiency, even if the battery life isn't class-leading. It's not perfect, but it's still a usable flagship experience.

[+ 1 more reply](#)**BeeTwoThousand** • 5mo ago

I'm doing the same as soon as mine arrives...going from a three+ year old Pixel 6 Pro to a Pixel 10 Pro XL.

**[deleted]** • 5mo ago

[Skip to main content](#)

Create

unique AI tools

Wait, has Google finally made functional and useful AI tools?

Last I heard they were still awful, what kind of unique tools does the 10 offer? You know first hand that they work as advertised?

**former-ad-elect723** OP • 5mo ago • Edited 5mo ago

Pixel 6 Pro

Google has always been the best at AI. I'm only going to list the ones that debuted with the 10 series:

- 1 Magic Cue
2. Voice Translate
3. Camera Coach (arguably not that useful if you already know how to take photos but useful for those that don't)
4. Auto Best Take
5. Pro Res Zoom
6. Enhanced Gemini Live
7. NotebookLM Integration with Pixel Screenshots
8. Pixel Journal (not really P10 exclusive since I got it on my 6 Pro)
9. Music Creation in Recorder (not all too useful)
10. Pixel Studio upgrades (not all too useful)

In addition to the ones from prior generations:

Pixel 6 series (2021):

1. Magic Eraser
2. Face Unblur, Motion Mode, Real Tone
3. Call Assist improvements: introduced Direct My Call, Wait Times, and Hold For Me improvements
4. Assistant Voice Typing upgrades

Pixel 7 series (2022):

1. Photo Unblur
2. Guided Frame

Pixel 8 series (2023-2024):

1. Magic Editor, Best Take, Audio Magic Eraser
2. Zoom Enhance
3. Gemini Nano on-device: Recorder Summarize and Gboard Smart Reply
4. Circle to Search

Pixel 9 series (2024):

1. Add Me
2. Super Res Zoom video
3. Call Notes

[Skip to main content](#)[+ Create](#)**aminervia** • 5mo ago

Obviously I have a pixel phone, I own a six. Every interaction I have had with Google AI has been extremely disappointing.

I really wish they would just improve the assistant to basic functionality instead of implementing AI months or years before it's actually ready and useful

**iz_raymond** • 5mo ago

People that used to have many choices will complain for that price, while those that have little to no choice won't complain. That's the American market vs Global market in a nutshell. I'm from the later, and I only buy Pixel when the price goes down significantly (like my Pixel 7).

Can't justify a product price if it comes with too many "buts"

**former-ad-elect723** [OP](#) • 5mo ago

Pixel 6 Pro

Exactly. If you've had lots of options, you'll be more critical. In markets with fewer choices, the Pixel stands out more, especially when you can grab it at a good price.

**WizeAzz82** • 5mo ago

Great take. You will never convince a raw specs user otherwise. I'll take something smooth with solid battery life and a great camera over hardcore specs. If I wanted to game I'd be using a gaming system.

**HidingInPlainSite404** • 5mo ago

You're framing it like caring about specs makes someone a "raw specs user," but specs are real data points. They matter because they define performance, longevity, and value. Dismissing them is like saying MPG doesn't matter when buying a car because you just want it to look nice.

I get that smooth software, battery life, and a good camera are your priorities, and that's valid, but those things don't erase the fact that there are phones with stronger hardware and longer support. Specs aren't everything, but they're not nothing either.

**-KaiTheGuy-** • 5mo ago

This is honestly so true. Look at my post history when I try to explain why the Pixel is more than just specs and most of the responses always go back to "yeah, but it has a slower chip" like all people do is run benchmarks and game.

[Skip to main content](#)

Create

7 more replies

**Kitsel** • 5mo ago

I can see it both ways. I'm a happy Pixel user. I've gone from the 6 to the 9 pro, and my wife just got the 10 pro after using the 8 before.

Call screening is killer, night sight rules, and I love all the smart little things our pixels do for us. I love that it lets me copy 2 factor codes without opening the text and I love that it knows the menus of places I call ahead of time.

But every year I hope that this is the year we stop having to make major performance compromises. I'm a power user, and I've noticed the lack of performance on every single Google device we've had.

I love that we have the "smartest phones in the room" so to speak, but I wish I didn't have to compromise so heavily in other areas to get it.

For example, I don't game a ton, but when I'm bored without access to my PC, I'll play phone games occasionally. My 9 pro heats to crazy levels and games give me "turn down your settings to improve performance" popups while on the lowest settings playing games a \$300 mid-range phone could handle.

**horatiobanz** • 5mo ago

Top 1% Commenter

Well if you're convinced that a Pixel is smooth and has solid battery life then it's no wonder you are so easily satisfied. A raw specs person would insist the phone actually be smooth and have great battery life, cause they are paying enough where that should be a given. You can enable a developer option to tattle on the Pixel stuttering and being generally not smooth, since so many people who have had Pixels for a while are simply used to the jank and have convinced themselves that it's smooth.

**former-ad-elect723** **OP** • 5mo ago

Pixel 6 Pro

Exactly. People are so focused on raw specs that they forget about the experience. Besides, Google is catering to the mass market, not the small selection of hateful enthusiasts. And, for their main audience, the specs are more than adequate. Most people game on their PCs or consoles.

**horatiobanz** • 5mo ago

Top 1% Commenter

But I've had Pixels for years. The experience is not great. Constant bugs. Constant issues with random things going wrong with apps. Poor mobile reception. Forced Google widgets. Stuttering stuttering stuttering.

Specs matter. Google isn't the software wizard everyone keeps repeating like a mantra in defense of Pixels.

issues. I'm very happy so far.

Wet-Flatulence • 5mo ago

How many hours screen on time are you getting?

ConfusionMindless579 • 5mo ago

The P6 was down to 6-7 hours. I just had to charge it at least once in the middle of the day and of course overnight. The P10 has been going all day and still has 20-30% when I put it in charge overnight. Of course I don't have much experience with it. This is only my third day.

jaju123 • 5mo ago

There's not a chance you got 6-7 hours of actual screen time, I get 6-7 hours over a day on a oppo find x8 pro which has far superior battery life to the pixel. When I had a pixel 6 pro I barely got 3.5 hours of SOT over the course of the day before having to charge it. It was horrible

twotwo4 • 5mo ago

I am thinking of the same. Any other big changes that you have noticed

ConfusionMindless579 • 5mo ago

Few things that are similar are they are roughly the same size, which I like. Not close enough to use the same case but that's okay. I like the magnet built-in and I'm currently waiting for a holder that will attach to my vents in the car and hold the phone magnetically. I've only had it a couple days so I don't know much more yet 😊. I also liked that it was \$450 off opening day with Google Fi!

twotwo4 • 5mo ago

Thanks for the low down

Sadly, in Canada the discounts are not the same

I am strongly leaning towards it..... Else, may take the bite on 🍏

[revelson](#) • 5mo ago

I can't get my head around "Google isn't chasing performance for performance's sake". Are you confusing performance with specs?

[former-ad-elect723](#) OP • 5mo ago

Pixel 6 Pro

When I say "Google isn't chasing performance for performance's sake," I mean that the Pixel line isn't trying to top raw benchmark numbers or have the fastest CPU/GPU on paper. Specs like RAM size, CPU clock speeds, or Geekbench scores are one way to measure a phone, but they don't tell the whole story about real-world performance.

[\[deleted\]](#) • 5mo ago

Won't it make more sense to sell phones with the latest specs as well as optimize the os to fully utilize those specs? I mean, can a flagship that lags 2-3 behind the latest flagships really make it through 7 years of updates?

[former-ad-elect723](#) OP • 5mo ago

Pixel 6 Pro

Yeah, in a perfect world, sure, best specs and best optimization would be ideal. But that's not Google's strategy. They're not competing spec-for-spec; they're building around AI + software features and betting that the silicon they designed is good enough to carry 7 years of updates.

Also worth noting: Pixels age better than their raw specs suggest. My 6 Pro is almost 4 years old and still smooth. If that phone can hold up, I don't see why the 10 can't make it through its promised support window.

[+](#) 1 more reply[horatiobanz](#) • 5mo ago

Top 1% Commenter

That would make sense if the Pixel was capable of everything a spec powerhouse could do. But it isn't. The Pixel can't even maintain smoothness within its own OS with the Tensor while scrolling around. And there is a tool in developer options that self reports the stuttering to take the Pixel user who has gotten used to the jank out of the equation.

[+](#) 2 more replies[anonymous-bot](#) • 5mo ago

Pixel 10 Pro

If my \$220, almost 4-year-old 6 Pro still feels like a flagship in 2025, then a brand-new Pixel 10 sure as hell isn't the garbage people are making it out to be.

[Skip to main content](#)[+ Create](#)**former-ad-elect723** OP • 5mo ago

**electr0de07** • 5mo ago

It's definitely a good phone but these "pixel 10x phone is good/great/amazing" posts are getting stale.

[+ 1 more reply](#)**Damag3dd** • 5mo ago

Pixel 7

Just wait for the price drop on black Friday, then it will be fine

**former-ad-elect723** OP • 5mo ago

Pixel 6 Pro

I might not get it this year, still undecided.

**Ok_Muscle_3770** • 5mo ago

So when people say the Pixel 10 "isn't a flagship," I don't get it. Premium build, gorgeous display, long-term support, unique AI tools, and a camera system that's still among the best in the game, that's a flagship.

Apart from the "unique AI tools" which are nothing but silly gimmicks, every major flagship has the qualities you exactly described. And it's down on performance. And the camera. Way too many tradeoffs and compromises for silly gimmicks.

Enjoy your phone. Congratulations. That doesn't mean the complaints are any less valid.

**former-ad-elect723** OP • 5mo ago

Pixel 6 Pro

Calling them 'silly gimmicks' is kinda dismissive though. Features like Magic Cue and Pro Res Zoom actually *do* add value for people who use them. Just because you don't doesn't make them gimmicks.

Yes, other flagships have premium builds, displays, etc; no one's denying that. But Pixels bring a different angle with AI + software integration. It's not going to be everyone's cup of tea, and that's fine.

Valid complaints exist, sure, but acting like the whole phone is a compromise because it's not chasing raw specs is where I disagree.

[Skip to main content](#)[Create](#)**Primalpancake** • 5mo ago

U can have opinions. Doesnt make it valid

**F1nishingDutch** • 5mo ago

And again the battery sucks

**former-ad-elect723** [OP](#) • 5mo ago

Pixel 6 Pro

Pixel batteries haven't truly sucked since the 4/4XL days. The 6 Pro and up easily get a full day with normal use, and the 10 series pushes even further with efficiency gains. People love repeating the 'bad battery' line like it's still 2019, but it just isn't true anymore.

[+](#) 3 more replies**[deleted]** • 5mo ago**zooba85** • 5mo ago

A 2025 flagship still needing stupid gimmicks like video boost to shoot 4k video is super lame. Even an iPhone 11 beats Pixels in shooting video

**former-ad-elect723** [OP](#) • 5mo ago

Pixel 6 Pro

No, an iPhone 11 wouldn't beat the Pixel in shooting video, and you know full well that it wouldn't. Pixel 10 handles 4K/60 way better. Calling them gimmicks just shows that you're judging specs instead of footage. Next time, actually compare the video before throwing shade.

**zooba85** • 5mo ago

iPhone 11 does all processing on device and even shot in Dolby Vision so no, Pixels are much worse at video than a 6 year old iPhone.

Video boost is a BS cloud solution only needed because tensor is so weak

**former-ad-elect723** [OP](#) • 5mo ago

Pixel 6 Pro

Video Boost just helps the phone process high-quality video more efficiently. Comparing a 6-year-old iPhone to a brand-new Pixel 10 isn't fair, as the Pixel still wins in sharpness and

[Skip to main content](#)[+ Create](#)

Besides, it shouldn't matter to you. Don't buy a Pixel then, as it's clearly not for you.

zooba85 • 5mo ago

What's not fair is comparing video boosted videos with videos processed on device.

Video boost is stupid because any OEM could provide a similar solution. Cloud processing isn't special it's slow and inconvenient. Pixel videos processed on device are way worse than the iPhone 11

[+ 5 more replies](#)

Alternative-Farmer98 • 5mo ago

Honestly your story about being able to get a Pixel 6 pro for 200 bucks to me is the obvious reason not to buy the Pixel 10.

Doesn't have to be the Pixel 6 pro you can buy the Pixel 8 pro or the 7 pro or the 9 pro.

I just can't imagine why you would choose the latest one and deprive yourself of a SIM card to get.... What a magnet on the back?

Save yourself 700 bucks and buy a Pixel 8 pro instead.

[+ 1 more reply](#)

[deleted] • 5mo ago

Classic "But the software" cope, Google shot itself in the foot by restricting AOSP and Open-Source apps. I don't think doing that is being focused on the software or "software is what defines Pixels"

[deleted] • 5mo ago

When has the Pixel ever marketed the best specs anyway? I would totally agree if Google was advertising that, but they aren't. It's a dumb complaint

former-ad-elect723 [OP](#) • 5mo ago

Pixel 6 Pro

Exactly, people complaining when Google already stated their goals

[deleted] • 5mo ago

[Skip to main content](#)[+](#) Create

still feels like a flagship phone then you must not have used any flagship phones in the past 5 years.

Flagship phones have brighter screens, better battery life, and modems that aren't trash like the ones in Pixel 6 series phones.

Your battery life sucks because of the garbage modem and how much heat the phone gives off when using 5G. Set the phone to LTE mode and your battery life and signal strength should noticeably improve.

As for the Pixel 10 series.. people are complaining because Google is charging flagship money for the latest mid phones around. The base 10 has actually gone backwards in quality for the camera. Software is nice, but not everyone is satisfied with dropping \$1000 so that a clanker can auto-translate their complaints about the phone into Swahili

Although I agree with you that the main draw for pixels has been the software.... go look at a phone like the latest Samsung fold and you'll realize that Google is getting they ass whipped on hardware. No, I don't expect a \$1000 phone to match the specs of a \$2000 phone, but there is a fair chance that the advances in hardware will make its way to the SXX line.

I don't dislike Google, and I did order a Pixel 10 pro, but after realizing that the free-after-trade-in Moto Edge phones Tmobile doled out in 2022 and 2024 are roughly 90% as good as the pixel 6 pro (better, if you look at some specs)... the rose covered glasses have come off.

My next phone will be a Peppa Pig phone if El Goog can't give customers a compelling reason to buy their devices. If I could have gotten a better price on a Pixel 9 Pro this time around I would have.... but Tmobile apparently didn't have any more in stock.

former-ad-elect723 OP • 5mo ago

Pixel 6 Pro

Yeah, I get where you're coming from. The Pixel 6 Pro isn't perfect, and the modem/5G battery issues are real. LTE mode definitely helps (but so will replacing the battery when I do it), and of course, the hardware isn't going to match a Samsung Fold or a \$2k device.

That said, my point isn't that the 6 Pro is *the best* phone ever; it's that even a nearly 4-year-old, \$220 refurbished 6 Pro still feels like a flagship in daily use. Software, camera usability, and overall reliability are what make it feel that way for me. It definitely has its flaws, such as the subpar modem and battery life, both of which have improved since 2021 with software updates. The battery life isn't even an issue for me since I carry a power bank/charger around with me everywhere I go.

I agree the Pixel 10 is expensive, and yeah, some of the hardware choices are debatable. The Pixel 10 has a downgrade in camera hardware because it added an extra telephoto camera. Definitely a tradeoff, one that I'd argue did not have to be made. But the Pixel line isn't trying to win on raw specs; it's about a consistent experience, long-term updates, and AI features baked into the software. That's why I'd still call it a good phone, even if it isn't a spec monster. Software is the main selling point of the Pixel phones, because Google is simply doing what it's always been good at: making software. Google only got into the consumer hardware space quite recently if compared to other major tech companies.

Pixel phones aren't for everybody, anyway. If you want a phone for hardware, go for OnePlus or Samsung. Nobody is being forced to buy a Pixel.

[Skip to main content](#)[Create](#)

Haters gonna do what they do best. Let them hate. Enjoy your new phone. I am, gimmicks and all.

**former-ad-elect723** [OP](#) • 5mo ago

Pixel 6 Pro

Yep, lol. They should just stick with their iPhones. But actually, I didn't get a new phone. I might, later this year or next year though

**SgtSilock** • 5mo ago

Genuine question, is the camera system still making the best?

I'm hearing so much shit talk about the cameras, which is weird because pixels held the camera crown for years.

**Uranhahn** • 5mo ago

Can Gemini do shopping lists, notes and playing songs (Spotify) on-device in airplane mode?

**Purple_macro** • 5mo ago

I started with the Nexus 5, got a new Google phone about every other year. I still have and occasionally use my 1XL, 3a, 4 XL, 6, 6Pro, and our two 8pro XLs.

My best friend uses top of the line Samsungs and starts complaining about them slowing down before the first year has passed. I have used his phones and numerous others; the only other one I liked was the One plus.

Some of my/our Pixels belong to my wife and she switched to Pixels from iPhone. We love both the Google software, and the frequent updates/upgrades.

I can find no reason to switch.

Pixel 9a

camera system that's still among the best in the game, that's a flagship.

9a main came rofl

Op is on fucking crack.

Edit: Sorry I offended the cult.

Pixel 6 Pro

Not a bad camera by any means, but still a fair criticism. You do you, though. I'm just sharing my thoughts on the Pixel; not everyone has to agree.

Pixel 9a

I mean my 6a camera is not bad either. It has been my favorite Pixel yet. You know why? Because I paid \$150 for it with a trade in of my 3a, oh and I still use the buds As that came with the deal.

There is no such thing as bad hardware, just bad prices. At current prices it's beyond unacceptable

Pixel 6 Pro

Yeah, I get that. My main point is more about the overall experience: even older or mid-tier Pixels can feel solid day-to-day, but I also see why people get frustrated if they're paying flagship prices and feel like the hardware hasn't kept up. Like, the Pixel 6 series MSRP was absolutely perfect. Totally agree that some of the hype is about brand loyalty too
