I think it's people who watch a lot of video on their phone and only use Wi-Fi. I could get max 5 hours on my current phone (older iPhone to be fair). I'm trying to figure out if my battery life is that bad and an upgrade would be a huge improvement, or if people just have different usage than me.

**SoraUsagi** • 5mo ago

SOT = ? Screen on time? I'm on 5g/LTE at work, stream music to headset for 6 hrs. And look over reddit way more than i should.... I'm at 20%-40% at end of da on pixel 9

**UltraPharaoh** • 5mo ago

These people are usually not honest about their usage patterns. A lot of these people are at home on WiFi most of the time. I've found that once I go outside and use 5G, my battery drains quickly and I barely get 3 hours of SOT.

[+ 1 more reply](#)**SSDeemer** • 5mo ago

Top 1% Commenter

I am a light user getting ~2 days of time from unplugging a 9a @ 80% charge at 0700. That's usually down to ~50% by the time I go to bed.

- Disable 5G. I live in a rural area, and as far as I can see 5G offers me no benefits.
- Most days almost all my phone usage, including calling, is over WiFi
- In general, I loathe social media.
- Watching videos longer than 60 secs on a phone with a tiny screen and tinny speakers sucks. I use either a laptop, or cast to my living room TV.
- On average, I make/receive fewer than 10 phone calls a week.

For me, a Pixel is a camera that happens to be able to make phone calls, check the weather and news, etc. **IF** I have a day when I anticipate shooting a lot of photos or videos, I *may* charge it to 100%, but I usually have a battery pack with me for a quick top off.

**ttul007** • 5mo ago

Do a system update. It really boosted battery performance for me

[+ 2 more replies](#)**drm_75** • 5mo ago

[Skip to main content](#)[Create](#)

I made no other changes apart from install the latest update and restarting my phone etc.

Now suddenly my battery goes from 100% to like 30% in a matter of hours with minimal use. I can literally watch the battery percentage drop in the icon after maybe half an hour of casual browsing etc.

I'm not playing games or was hing YouTube in 4k or anything like that.

I've reported this to Google and been told to optimise my battery and apps (I also only have phone charging to 80% and I've always had it set to that)

Apps are all optimised as they were before the update.

No other apps have been installed since doing the update

I literally have no idea what to do now.

Any one else having issues? This is much like the May update which was killing people batteries back then

Cheers.

sid3091 • 5mo ago

Pixel 8 Pro

Same here. The new Material expressive has tanked my battery life. I used to have about 40-50% left at the end of a typical workday (approx 5.30-6PM), and now i'm at 30% by 3.30PM.

the_last_grabow • 5mo ago

I have been experiencing the same thing on my 9 pro XL. I thought I was crazy the first day after the update with how fast my battery went down. But these last few days have been the same. Minimal or normal usage and my battery just tanks. I have noticed that the system is using 30-40% of the battery in the background.

MrsMusicTeacher • 5mo ago

My phone dies before I can leave work now. I need to bring a charger to work, and never had to before.

MGReaper_ • 5mo ago

I just posted the below separately, but what you're describing sounds like it could in fact be due to software...

"I woke up at 05:00, and, as you can see from the screenshot below, only used 2.5hrs' worth of screen time during the day. Phone dropped to 13% battery by the time I got home at 17:00 and stuck it back on charge. Am I expecting too much for 12hrs of carrying it around?

<https://i.imgur.com/U4xbmFW.jpeg>"

[Skip to main content](#)[+ Create](#)

Same for p9pro after the update. Sucks.

Majestic_Ad_7162 • 5mo ago

Same issue here on a 7 Pro.

GuideEast4103 • 5mo ago

I'm not an expert, but I turned off background refresh for apps like System Intelligence, and now my battery is better.

harryhov • 5mo ago

Pixel 10 Pro XL | Pixel Watch 4-44m

Same!

Hairy-Cantaloupe-995 • 5mo ago

I'm losing around 5-10% of battery every hour. This can't be normal, right?

**Rapogi** • 5mo ago

Pixel 9 Pro XL

Same here on 9XL insane drain lost 3% in 10 minutes doing nothing

<https://imgur.com/a/vyLLOPo>

**Draigwyrdd** • 5mo ago

Genuinely ridiculous. I've lost 31% in under three hours - it was fine a few days ago!

1 more reply

**Aperture_client** • 5mo ago

So it's been like a week now did we get any news on this update turning our batteries into rainbow stripe gum or nah

**jaz9999** • 5mo ago

Does the camera on the 10 Pro feel like a significant improvement over past models? I'm on a base Pixel 6 and I'm considering upgrading as I can get a 128gb Pixel 10 Pro for £479 after offers. I wouldn't have even considered upgrading if not for the offer as my P6 is still working pretty well.

The camera is my only worry as I don't want photos that are massively over processed due to AI / algorithms (I'm probably worrying for no reason here).

**fjleon** • 5mo ago

i haven't taken the camera for a full spin but just comparing a selfie that i took at the same time between the p10pro and p7pro i didn't see a difference

**danhakimi** • 5mo ago

[Skip to main content](#)[Create](#)

technical improvements, but the main things that stand out to me are:

1. The portrait mode 1x field of view is much, much bigger. I like that, it's convenient, although I do end up zooming in / cropping it down. I'm not sure if that's the ultrawide doing extra work, or if it distorts things, or what... I'll figure that out eventually.
2. The video camera can do 4k 60fps, *or* 4k 30fps HDR. These don't feel like *huge* improvements to me, but they are improvements.
3. I went for a terabyte of storage this time, which I specifically went for so I could store more video. If you are going for the 128gb, then something like 4k 60fps is going to be a little bit silly.

**Blaze4G** • 5mo ago

I have a base 10 and it's far better than my pixel 7. Both rear and the selfie is atleast 2x better.

[+](#) 1 more reply**f4xxf4xx** • 5mo ago

my battery is draining extremely fast on my Pixel 8 pro since the September update

[+](#) 1 more reply**wichwigga** • 5mo ago

Pixel 9

I'm getting huge battery drainage from 5G on base 9, is the P10 Pro any better in this regard? I literally went through multiple days of finding what was draining my battery so fast when driving with the GPS... tried turning off smooth display, Bluetooth, etc but at the end of the day after switching to 4G it was the most obvious answer...

If not I guess I'll stick to 4G on my 9 from now on...

**SoorajK1** • 5mo ago

For some reason, the QPR1 has made my battery life go to shit

**guillottr** • 5mo ago

Any ideas on a solution?

**Tesla_Lover10021** • 5mo ago

Pixel 7a

Device / Build:

Pixel 7a – Android 16 QPR1 (Build BP3A.250905.014)

[Skip to main content](#)[+](#) Create**Notes:**

- Not in the beta program, this is stable QPR1.
- Reported to Google here: [Issue Tracker link](#)

Question:

Anyone else seeing this on the Pixel 7a or other Pixels after updating to QPR1?

Used_Worldliness9344 • 5mo ago

I have the exact same problem with my Pixel 7. This isn't the first time Google has broken one thing by fixing another. Besides, the system performs a bit worse than before.

ZebraDude • 5mo ago

Pixel 9

Yep, I'm seeing the same issue with my Pixel 9. It is sitting on 100 charge. I have had it set to limit charging to 80 since I received it in July

SSDeemer • 5mo ago • Edited 5mo ago

Top 1% Commenter

The Battery health charging limit is supposed to do a charge to 100% every so often, unless interrupted. This is from the onscreen help for Limit to 80%:

To help extend battery lifespan, your phone will only charge to 80%. Your phone will charge to 100% every one to two weeks to maintain battery and level reporting accuracy.

See also: <https://support.google.com/pixelphone/answer/6090612?hl=en#zippy=%2Climit-charging-to>

Used_Worldliness9344 • 5mo ago

Everyone knows this. The guys above wrote that the 80% charging option simply doesn't work. I have the same problem with my Pixel 7. Restarting doesn't help.

SSDeemer • 5mo ago

Top 1% Commenter

If everybody knew this, there wouldn't be so many questions about it.

I have used the 80% charging limit on a Pixel 6a and now on a Pixel 9a, and it always stops at 80%, except for once a month or so when it goes to 100%. The first time I noticed charge going above 80%, I interrupted charging by unplugging the phone. By the next charging session I had read the documentation, and realized that an occasional 100% charge was "normal." Prior to that I used AccuBattery to notify me when 80% was reached, but that's all it did, the phone continued to charge if I ignored the notification.

[Skip to main content](#)[Create](#)[1 more reply](#)[1 more reply](#)**paintray98** • 5mo ago

Yes, i have the same issue on my Pixel 8 Pro. Even a reboot doesn't work for getting it to respect the 80% charging limit option i have enabled

Joy add me to the list of affected users.

Battery life has been draining faster than usual since the september update.

Phone- Pixel 9 Pro XL

From 8am to 6pm - its down to 25% - Adaptive battery is enabled

At work i rarely use my phone and if i do its messaging on Teams, whatsapp, reddit or watching youtube on my breaks.

On my transit home i play a game for 10 to 15 mins

Please GOOGLE fix it - i really don't want to flash down to an older ROM grrrr :S

UPDATE:

Turning off 5g helped heaps - came home today with a battery life of 48% :D + i had a longer workday.

[Skip to main content](#)[+ Create](#) Galaxy Nexus, Nexus 6P, P1, P4, P6, P8 Pro, P9 Pro, P10 Pro

What phone are you on?

 [+ 1 more reply](#)[+ \[deleted\]](#) • 5mo ago**onepunchbald** • 5mo ago

After the September update if I have more than one media control widget in quick settings, the controller animation breaks when swiping to the second media control widget.

**Typical_Woodpecker63** • 5mo ago

This update is doing my head in, I sorted the battery issue but it's the adaptive timeout that's annoying me. Constantly set at 30 seconds despite it being 1 minute previously. I'm changing it but it just goes back and this is a Pixel 7a I'm on.

To be honest I'm not even sure it is 30 seconds, feels less. Any solutions anyone?

**Digs31789** • 5mo ago

How did you sort the batter issue? I'm assuming you had bad battery drain? I'm experiencing this on my 10 pro

**GuideEast4103** • 5mo ago

After the update, my battery life went bad and disabled some background applications like Android System Intelligence, etc. And now, at 50 percent, my SOT is 4 hours, with 24 hours since the last large charge.

 [+ 3 more replies](#)**mohanadr** • 5mo ago

P9PXL - Battery life is trash.

I work from home, so I'm always on wifi - full signal. I don't game or do any heavy duty tasks. I don't take that many photos and no videos. I have location off, bluetooth mostly off. My usage is whatsapp and browsing. Phone is new - 100% battery health + limited to 80% and never below 20%. Using dark mode and a dark wallpaper.

Went from 80% to 38% with 2h24 SOT. Any suggestions?

Life_Kick_8822 • 5mo ago

High battery drain Pixel 9 pro XL

Hello, Since the last September update, my phone is draining the battery much faster. I've seen on the forums that the same thing is happening to other users. Has anyone tried a factory reset? Updating to the latest beta? Re-flashing the August ROM? Or even reinstalling Android 15? If so, I'd like to know if any of these solutions have worked for you.

Life_Kick_8822 • 5mo ago

After flashing an old ROM I can confirm the battery is working well again. Could someone confirm that updating to the latest beta version also fixes the problem?

pearsareforbidden • 5mo ago

My pixel 8 has suddenly (within the last week) started draining 1% every second when it hits 20%. I have updated the software to the latest version but the issue prevails. The battery diagnostics feature doesn't show a problem occurring.

Has anyone else had this issue and got a solution?

Thanks!

[+ 3 more replies](#)

jerewrig • 5mo ago

Little worried about the screen issues with the Pixel 10 that's being reported. Hopefully it's just a software issue

[+ 4 more replies](#)

Baspower • 5mo ago

Pixel 10 Pro

Does the "adaptive timeout" setting work for anyone? Screen attention seems to work, but with the other option my phone keeps turning off while I'm still using it.

[Skip to main content](#)[+ Create](#)**imakesawdust** • 5mo ago

Does anybody else's phone seem to discharge faster when charge optimization is set to stop at 80% versus charging fully? Some empirical tests on my P9pro suggest that when we start from 100%, my phone's idle discharge rate is a little more than 1%/hr. When charging optimization is set to stop at 80%, the idle discharge rate jumps to around 1.5%/hr.

Is this because enabling the 80% mode causes Android to reduce the expected battery capacity from 4700mAh to 3750mAh?

**sherluk_homs** • 5mo ago

I've been using 80% charge since day one of having my Pixel 9 Pro. After a year i still have 98% battery life! But since the update the battery is draining so much faster, even with little screen on time. Gotta check if it actually discharges slower when I do a 100% charge.

**imakesawdust** • 5mo ago

Yeah, it's an odd behavior that seems to be repeatable. I work remotely and almost never receive calls during the day so I can often go 7a-5p without even picking my phone up. After 10 hours starting from a 100% charge, I'm usually somewhere between 89% and 91%. But if I start from 80% charge, it'll be around 64-65% after 10 hours.

Now, there are some variables that I haven't eliminated. None of these tests were in airplane mode to rule out variations in 5G signal strength but if I do that, that'll be the rare time family or my managers try to reach me by phone rather than via IM.

[+ 1 more reply](#)**dcee101** • 5mo ago

September update has been aesthetically great but my phones performance is the worst it's been since I got the phone.

Pixel 9 Pro XL

- Random lag when using the internet on WIFI or with AT&T data, using Chrome. Tested a Google Pixel tablet next to my phone and it was blazing fast.
- Cell service degraded. Not sure if it's the modem but I've noticed significant issues with packet loss making calls unbearable until i reboot. it then works.
- Messenger app has animation bugs (lag) and has frozen a few times.

Overall, still love this update but I find myself being forced to reboot the phone every day. Never happened before.

[Skip to main content](#)[+ Create](#)

updates) need 3-7 days until you can expect the regular battery life / battery drain. This is because of different optimization process that run in the background (e.g. re-compiling all apps, elaborating sleep states / cycles,...).

I am happy to tell that yesterday, even after ~5h SoT, I still had 52% battery left.

The 4h and 52min of display usage were mostly used by Firefox (including Youtube in Browser), ChatGPT and Gemini while also doing some light work in Spotify, FairEmail and messenger apps. I was mostly in WiFi but also using Dual-Sim. Syncthing, 5 mail accounts, whatsapp, whatsapp business, telegram, discord,.. all running in the background as well.

That means it should be possible to get ~10h of SoT but of course, please take this values as an estimate.

wazzie19 • 5mo ago

Let's hope mine needs a few more days to adjust. It's been pathetic since the update. Charging mid day when I've never needed to do that before this update.

Wordless • 5mo ago

So I have the 10 XL and the only issues I'm currently having are the battery life, which will probably get better with usage.

Also another issue is when I switch between recent apps, the most recent app screen glitches. It automatically swipes to the right of a random app, and then when i try to swipe through the rest of my apps, they appear black and I'm unable to move past the 2nd to 3rd one. The crappy part is it happens randomly.

GreenAccomplished994 • 5mo ago

How is the phone overall feeling? I'm planning to upgrade from a Pixel 6 which still serves me well despite its age.

What do you mean by battery life getting better with time? Usually is the other way around :))

Wordless • 5mo ago

Oh it's fine I like the phone it's great I love the weight of it as well.

Well what I mean by battery life getting better is that the phone will settle in a bit more with my day to day task. When I had my pixel 9 pro xl the 1st few weeks I had to charge my phone very often idk if it was due to a bad battery or what, but then within a month I only had to charge my phone once I got home. I usually start my day around 6am and end it around 8pm or so at that time my battery life was around 25%

[Skip to main content](#)[+ Create](#)

Im not experiencing that with mine that might be a glitch on the OS. my experience has been quite consistent on the 10XL

[4 more replies](#)

FallenArtemis • 5mo ago

Do you guys prefer the size of the Pixel 10 Pro or the Pixel 10 Pro XL more?

Trying to decide whether or not I should go with a smaller phone than my S24+ with the P10 Pro or go with the larger phone with the P10 Pro XL. I really like the increased charging speed on the Pro XL, but I feel like the size of my S24+ is perfect and I don't know if I want a bigger phone. The Pro might be more accommodating with daily usability, so I wanted to gather some opinions :)

fjleon • 5mo ago

i was stressing over this, as the p10xl is \$200 more and i came from the p7pro. i couldn't justify spending that much.

fortunately i have been able to adapt to the smaller screen. believe it or not, .7 inches is a massive difference. everything looks tiny now, but i can still read it on the default font size.

[2 more replies](#)

Not_jus_ordinary • 5mo ago

I'm considering buying the Pixel 9 series of phone. For background, I am currently in S22 ultra and been facing issues with it for which I am getting rid of it and moving to pixel. But I am confused between whether to go with pixel 9 which would cost me around \$449 or €388 with all the discounts or pixel 9 pro which would cost \$585 or €504. Which would be better phone given the device im currently using which is also better value for money? Also please feel free to suggest any other device that you might think of

benjamin_bt • 5mo ago

My general rule is that if I can afford a pro version, I go with it, as it's going to be more future proof. Nowadays I usually switch phones every 3 years (company phone) and then pass it on to a relative, this is a good way to ensure they get a device that it's perfectly usable and has still plenty of phone in it for a couple of years.

Andrew82101 • 5mo ago

I just ordered my pixel 10 pro XL and was planning on getting the pixelsnap stand and the official pixelsnap case. However, I have been seeing people having trouble with lots of heat being generated. Is

 rxzlmn • 5mo ago

Re.: Can't see the 'new' battery charge information (P10P)

I've seen posts about the P10P providing direct live information on the charging rate/wattage - set I do not seem to find that.

I have a P10P and neither under 'About phone - Battery Information' nor under 'Battery' itself is there such a feature.

I'm using a Pixel 10 Pro with the latest QPR update (same situation with before that update though).

Is there something that I am missing? Any help appreciated.

Pixel 10 pro, 6 hours of screen on time with 35% left. <https://imgur.com/a/wPwNQSF>

**Sahkyo-Kitt** • 5mo ago • Edited 5mo ago

Pixel 9 Pro Fold for me. Ever since the September update - it looks great but apps like Audible, Youtube, Teams are using way more battery than they used to. I go from 100% in the morning to rushing to charge on my way home from work.

And if it completely dies it takes FOREVER to get enough juice to come back.

I have run the battery health check and it says everything is fine. I can only assume this is a OS power management issue.

Please google. I'm about to jump ship over to Galaxy because that flip phone seems a silly amount of fun.

**Fr0st1ne** • 5mo ago**lazato42** • 5mo ago

Just wondering if anyone else's battery is draining severely after the last update? My Pixel 7 was working just fine until I updated it. And now my battery drains rapidly and dies once the phone reaches 30%.

[Skip to main content](#)[+ Create](#)**baseballsalian44** • 5mo ago

When I plug my Pixel 7a in at night, it gives me a notification saying that charging optimisation will mean the phone is fully charged by 9am. However I have charging optimisation turned off, and battery health assistance turned off. I have a cheap electricity tariff between midnight and 6am so I don't want my phone to delay charging. Why is the phone still deciding when to charge, when I have disabled it in the settings? It happens every night and it's making me not want to have a pixel anymore.

**Wetzlar** • 5mo ago

Do you know that the difference in cost between 0.25usd/kwh and 0.50usd/kwh electricity tariff in terms of just charging phone is like half a cent per full charge? That's like 1 maybe 2 usd per year difference. Don't stress over it.

[+ 6 more replies](#) [+ 2 more replies](#)**snowsquirl** • 5mo ago

On my Galaxy phone, I could press and hold the battery saver button and get to battery usage stats. But on the pixel 10 it takes me to battery usage stats. It seems the only way to get to usage stats it go into setting, battery, usage. It is a number of swipes and clicks away. Is there a quicker way to get to the battery usage screen?

danhakimi • 5mo ago

can you set the face unlock to actually get rid of the lock screen? I never really want to be on the lock screen...

Are we getting the REAL android 16 update on Friday?

**Lionel-Chessi** • 5mo ago

Create

**TheSonic311** • 5mo ago

Pixel 7 Pro here.

I'm not sure why, but I never ended up updating with the July update that brought the new OS version... And from what I've been reading many who did had major issues. (Screen not rotating, tapping the screen networking, constant drops in Wi-Fi or cell coverage)

With my job being incredibly busy this time of year (teacher) I'm not at a point where I can play test and fix any issues. If this had happened in June, I would have just done it and dealt with it.

Does anyone know if any of the issues were corrected in the last update?

**GreenAccomplished994** • 5mo ago

I don't have any of those issues on my Pixel 6. I'm still waiting for september update here, hope nothing bad happens
