## Thought on Android 16 Stable Version Google Pixel

I asked to reddit ai to summarize issues after updating to android 16 and is that possible that they release a stable version with so many issues?

I think I won't update and will keep android 15 for a while

### General Issues

- **Alarms Not Ringing:** Some users have reported that previously set alarms do not ring after the update. ["previously set alarms not ringing \(do I have to reset all the alarms\)"](#)
- **Scrolling and Animation Issues:** Users have noted that scrolling and animations can feel less fluid. ["display scrolling and animation seems less fluid overall"](#)
- **Battery Life:** Several users have experienced reduced battery life after the update. ["After updating to Android 16 my Pixel 7 SOT is less than 3 hours and my battery degraded."](#)

### Specific Issues

- **App Switching Problems:** Some users have had issues with swiping up to close apps. ["when switching between apps, I often can't swipe up to close a specific app"](#)
- **Live Translation and Transcription:** The live translation and transcription feature may not recognize certain languages. ["the live translation and transcription feature on the Pixel can no longer recognize Japanese"](#)
- **Double Tap to Wake:** This feature may stop working for some users. ["Double tap to wake no longer works."](#)
- **Auto-Brightness Issues:** Some users have reported that auto-brightness is broken. ["Auto-brightness is completely broken."](#)
- **Touch Responsiveness:** Occasional issues with the screen not responding to touch have been reported. ["Sometimes the screen doesn't even wake up at all"](#)

### Navigation and Gestures

- **3-Button Navigation:** Users who prefer 3-button navigation may experience glitches. "If you want even more bugs, enable 3-button navigation and you'll get a glitchy, stuttery mess."
- **Gesture Control:** Some users have reported issues with gesture control. ["Gesture control and 3 button control didn't work anymore."](#)

### Connectivity and Network

- **Android Auto Issues:** Some users have faced problems connecting to Android Auto. ["Android Auto refuses to connect anymore. It just says 'trying to connect'"](#)

[Skip to main content](#)[Create](#)

## Other Issues

- **File App Problems:** The Files app can be slow and buggy. ["Files app full of bugs on P8, it takes minutes to delete things"](#)
- **Notification Issues:** Some users have reported issues with notifications being silenced or duplicated. ["Some of my notifications were silenced without any pop up etc when i'm using my phone"](#)

Did you also ask the AI slop to summarize issues people are having with Android 15?

[Popular-Discipline81](#) **OP** • 8mo ago

Not yet but I have latest Android 15 and works fine

[andyooo](#) • 8mo ago

I have the latest A16 and have none of the issues you mention. The point is not to deny these are happening to some people, but that it happens to some people with every version. And of course every complaint is not a legitimate issue, which AI slop cannot judge so If you let the AI go fishing for perceived issues it will just vomit anecdotes as facts.

[Present-Reality563](#) • 6mo ago

... and open it again. I have these issues on Android 16 and its definitely step by step more careful before shutting others down

**Valdjiu** • 8mo ago

Am I the only one without issues?

**SRFast** • 8mo ago

Pixel 8 Pro | Pixel 4 XL | PW2 Top 1% Commenter

No. You, me and everyone else who hasn't posted an issue in this sub. There haven't been any earth shattering improvements, but Android 16 didn't break anything either.

**Valdjiu** • 8mo ago

Android 16 is the fundation for the goodies coming in September ehehe

**RaccoonDu** • 8mo ago

Pixelbook Go

My phone Def runs cooler and has slightly better battery life

It's still shit but it's BETTER than 15

Thetes a trend

I remember I loved android 14 or 13 because battery life was way better than the previous one on my OP8T

And now I'll prob remember 16 being better than 15 again in terms of battery life

Makes sense, every new OS should be an improvement and more efficient than the last

But it's like every now and then, whatever they introduce in the newer OS, completely ruins the battery efficiency and it's back to being shit again

I hope M3E isn't that for 16, I don't think I can wait till the p11, and if the p10 isn't great on battery life with A16 and M3E, I might just jump ship to oneplus or somewhere else again

I love pixel but the battery life just isn't good enough, might be enough to overcome my hate for apple and I might try ios again

**Dense-Turnip2732** • 7mo ago

My pixel 9 pro xl is borderline unusable. Screen goes black twice and day at least and has to be restarted to fix. Auto brightness no longer works. Proximity sensor not working. Apps crash multiple times a day, again necessitating restart to fix. Signal is worse, particular issues with

[Skip to main content](#)[+ Create](#)**Squidalopod** • 7mo ago

Any update on this?

**Dense-Turnip2732** • 6mo ago

I got the update that claimed it would fix my issues. Still messed up , just slightly less so. Apps still crashing constantly, problems with mobile signal and data, proximity sensor still hit and miss, as is adaptive brightness and battery life is dreadful. I've been told to factory reset it and if that doesn't fix it, Telstra said to bring it in for them to send off for repair or replacement under warranty.

**Squidalopod** • 6mo ago

Pixel 9 Pro

Top 1% Commenter

After reading a lot about what different people were experiencing as well as reading responses/suggestions from Google support, I went ahead and installed the update 3 days ago, and everything is fine for my Pixel 9 Pro. I actually see no discernable difference at all in behavior/performance (they said battery life should get better, but I see no difference, though they say it could take a while).

I wonder if the continuing problems only occur for people who installed last month's update. Maybe whatever broke the previous update still isn't totally fixed in the recent update. I didn't install the previous – only installed the latest, so maybe that has something to do with it. 🤔

**Dense-Turnip2732** • 6mo ago

Possibly? I'm honestly at the point of just rooting my phone to flash an old version of something and see if I can fix it myself

**Squidalopod** • 6mo ago

Pixel 9 Pro

Top 1% Commenter

Good luck! I just don't trust major updates anymore. I stopped being an early adopter years ago... when it became apparent that Google (and plenty of other software companies) just view their customers as free beta testers.

I dismissed the notification for the latest update about 5 times before I finally felt comfortable giving it a shot.

**Dense-Turnip2732** • 6mo ago

Normally I'm the same but I was having an off day and did it without thinking 🙄

[Skip to main content](#)[Create](#)

It literally broke the Play System updates for me and dozens if not hundreds of people. Which directly impacts how my apps interact with the OS (since the Play System is effectively equivalent to firmware).

So for example, right now I'm still stuck on May 1st Play System update, and no picture-in-picture functionality works with any app I have.

The Play System downloads complete but fail to install. Every. Single. Time. I've actually chatted and called Google about this and have submitted every bug report they've asked for. Trying to help fix it not just complain!

The only solution people have found is POSSIBLY a factory reset. I shouldn't have to factory reset my phone after an Android drop. I also am overseas so I literally cannot do it because I not only don't have any of my tools or systems I have at home (I'm in IT) but it also is going to be weird with my sim and eSIM and the network here where I am.

So yeah this is the biggest problem I have along with at minimum, dozens of others, theres a few reddit posts with a couple hundred comments each about this since the Android drop happened however many weeks ago. Basically broke it for everyone who UPDATED ANDROID FIRST, which it kind of forces when you update OS, Play System, and Security at once.

For people who updated their Play Systems BEFORE the Android drop update they probably have no issues and have no issues installing new ones.

The rest of us? *Pppfffffft*

Anyway this is just the biggest problem IMO as someone in IT since it also essentially works as a security update by forcing apps to conform to the Play System.

If this broke floating key boards or a specific app or messed up something somewhat menial I really wouldn't care. But breaking your ability to install IMPORTANT UPDATES is something I personally care about.

Upvote, down vote, don't care. It's the position me and at minimum dozens of others are in. Plus as we all know for every 1 person who posts about something on Reddit there's probably a hundred who haven't.

GOES BOTH WAYS TOO: Hundreds WITHOUT ISSUES! I couldn't tell you which way it trends since it seemingly has to do with the order in which updates are installed and some people don't even bother. Tbh most of you posting here would be SHOCKED at how .any people don't update their devices. My wife has an iPhone 11 that I don't think she's updated in 4 years. I told her when I setup the network in our eventual home she's not getting on wifi with any device that out of date. Absolutely insane. And it seems like MANY PEOPLE in BOTH the USA and overseas just don't care about updates.

Those of us who get excited for a new version of Android or iOS? We are the VAST MINORITY. The average Joe doesn't care as long as their phone works.

But this is a big one IMO and the only other solution I've discovered besides a factory reset is to root your phone, download the latest Play System update APK and side load it. And it's 2025: I shouldn't have to root my phone to fix an update anymore that I should have to factory reset it.

[Skip to main content](#)[Create](#)

Anyway that's mine, and other peoples, biggest problem with this update once again because it impacts EVERY APP and has a cascading effect.

Sorry this got long. I'm sitting in another country's equivalent of a DMV only a billion times worse and I just have a lot of free time at the moment lmao.

**carlinhush** • 8mo ago

Pixel 8 Pro :: Vodafone DE

No issues here so far. As a hearing aid user the update to A16 was a leap forward and I couldn't be happier

**raghav853** • 8mo ago

Pixel 8a

Exactly what I was thinking, I didn't experience any new issues.

**[deleted]** • 8mo ago

No issues here

**Mundane-Text8992** • 8mo ago

Pixel 8 Pro

I am yet to allow the update to occur on my pixel 8 pro. I'm guessing the advice is don't do it until it's sorted. 7 years of software support is pretty meaningless if you're afraid to allow it to update!

**Squidalopod** • 7mo ago

Pixel 9 Pro

Top 1% Commenter

7 years is meaningless given the limited life of LI batteries. When they first announced the 7-year update policy, I just rolled my eyes. I squeezed all the life I could out of my Pixel 2 XL, and after 4 years, it was impossible to make it anywhere near a day without at least a couple of recharges.

**Present-Reality563** • 6mo ago

pixel implemented limiting battery your 80%. keep your battery between 35-80% by regularly charging it and it will last longer than 7 years.

If I double tap power to bring up my camera, I can't take pictures until I unlock the phone and then open the camera. I have so many issues since updating is there a way to revert back or reinstall?

**sekhmetx** • 8mo ago

That happens with mine and I'm on 15

**Bgibbs** • 8mo ago

Pixel 9 Pro XL

I never had issues till I updated to 16 🙄

**optimuswalken** • 8mo ago

Yeah trying to swipe away various recent apps is now horrible at best and sometimes atrocious. If your swipe up isn't absolutely perfect it won't swipe away. Doesn't happen literally every time but most of the time.

**Lanky-Opposite5389** • 8mo ago

Pixel 6a

I've noticed that it's most of the Google apps. Messages, you have to swipe it away from the middle to top of the screen. It's getting old. Chrome goes away if I swipe anywhere.

**Negative\_Equity** • 8mo ago

Double tap to wake is definitely an issue for me.

Auto rotate doesn't seem to work after a while until I reboot the phone.

**Popular-Discipline81** **OP** • 8mo ago

You can go back to android 15 with Android Flash Tool and wait for more stable version with bug fixes.

I only encountered an issue with Notifications, maybe just twice and I'm not sure if it was an issue or I just didn't hear the sound, but I recall getting 2 notifications without any sound. I didn't get any of the issues above

[Feeling-Citron6352](#) • 8mo ago

Anyone having issues connecting to vehicle Bluetooth after updating??

[Ill-Pea-7529](#) • 8mo ago

Tired of being their test guinea pigs

[Popular-Discipline81](#) **OP** • 8mo ago

Are we?

[jortography](#) • 6mo ago

Yup early updates, we are the QA. Like how Windows is with their users. Btw I do have issues, but I'm a Pixel 6, so I believe it breaks older pixels. Newer pixels prob aren't effected. I spoke with Google support and got that response. Was told hard reset, wait for new update or new phone. They.... Didn't seem to care.

[Saberx1974](#) • 8mo ago

I have a Google Pixel 9 Pro XL running Android 16 and the issues that I'm having with this update have been the worst, for me, since my old nexus phones. The amount of times I've wanted to throw this f'ing

[Skip to main content](#)

Create

**Popular-Discipline81** OP • 8mo ago

It's hard to understand how they managed to release a stable version with so many issues. They were probably relying on AI-based coding tools, but those are still far from mature. Does that even make sense? 🤔

**Squidalopod** • 7mo ago

Pixel 9 Pro

Top 1% Commenter

There's nothing wrong with using AI coding tools as long as humans still do code reviews and set up linters and other automated code-checking tools. One would hope Google does that, but I guess you never know.

**asstroyes2** • 8mo ago • Edited 8mo ago

(Pixel 7)

Tap to wake display doesn't work. Have to press lock button every time. If I have battery saver turned off it shows the outlines for the fingerprint scanner but doesn't work. Have to press power button first.

Flip to shh is broken. Flips to dnd, doesn't revert to normal after flipping it back.

Edit: Reset app preferences solves both

**Popular-Discipline81** OP • 8mo ago

It's worse than a beta version

**asstroyes2** • 8mo ago

Well I figured out the thing. Resetting app preferences worked for both of these for now.

**Squidalopod** • 7mo ago

Pixel 9 Pro

Top 1% Commenter

Do you have any other issues after resetting app preferences?

**445ppop** • 8mo ago

Here's an additional point: The weather no longer appears below the date, and the information from the weather widget also disappears. Many users have encountered this issue after updating to A16, and so far, there has been no effective solution.

[Skip to main content](#)[+](#) Create**445ppop** • 8mo ago

Yes, there's currently no way to fix it because we haven't changed any settings. This issue is solely caused by the A16 update. Let's wait for Google's upcoming update to see if it will fix this bug.

**ronakg** • 8mo ago

Pixel 10 Pro XL

That's likely not an Android 16 issue. It must be some server side bug if it comes and goes.

**[deleted]** • 8mo ago**Therasse** • 8mo ago

I feel like the QPR Beta 2 is more stable than the "stable" Android 16 release.

**dunderlunn** • 8mo ago

Is android auto working yet?

**Therasse** • 8mo ago

I'm not using Android Auto, so I can't comment on that unfortunately.

**r1ridertampa** • 8mo ago

There was an Android Auto update and it does seem stable now.

**kilara13** • 8mo ago

I'm just using a patched music YouTube/YouTube I found somewhere on github seemed legit. Work perfectly

**kilara13** • 8mo ago

You can always use a browser like kiwi to play things in the background or in picture in picture mode

**chriswelch** • 8mo ago

[Skip to main content](#)[Create](#)**mlemmers1234** • 8mo ago

After a factory restore my phone seems to be working better. Initially though had plenty of UI stuttering and messaging application lag. Using the 9 Pro XL so that was definitely disappointing. Seems fine though after a few days so I guess not the end of the world doing a factory restore

**Squidalopod** • 7mo ago

Pixel 9 Pro

Top 1% Commenter

You mean factory reset as in completely wiping the drive and setting up your phone from scratch?

**clearall2** • 8mo ago

Pixel 9

Notification issue! Today, I let my phone stay idle for a few minutes -> no notifications at all, battery saver is off

**Popular-Discipline81** OP • 8mo ago

Yeah I had same problem I switched back to Android 15

**Biaxialsphere00** • 8mo ago

Display always goes random and not truly set. Never had it on 15. Hate this update. Might go to Apple or someone else after this shit...thanks Google...

**Popular-Discipline81** OP • 8mo ago

Don't know why they want to lose clients on purpose

**MojoVersion8** • 8mo ago

I've also found that Bluetooth audio stutters a lot, I would downgrade back to Android 15 if not for the fact that I basically need to factory reset to do that.

**Popular-Discipline81** OP • 8mo ago

Yeah I did. I have all Synched so for me it was easy.

[Skip to main content](#)[Create](#)

screen ever since updating to A16.

**kidkag3\_** • 7mo ago • Edited 7mo ago

Can't connect to Wi-Fi. Can't connect to Bluetooth. Phone randomly restarts. Side button doesn't work. Can't tap to wake. Phone runs hot. Can't even search functions in my settings, nothing shows.

This all started immediately after the update. I want to throw this phone in the garage.

**Popular-Discipline81** OP • 7mo ago

You are right

**Ruffian143** • 6mo ago

Since update Pixel 6 all screwed up. Can't change font or display size. Keyboards messed up, just does not work like it did before the update. Tired of spending so much time trying to get things to work the way they used too.

**Popular-Discipline81** OP • 6mo ago

Flash It with android 15

**UbdU** • 8mo ago

3-button navigation is now bad, along with app switching and lag time to wake up my device, and extra heat. I'm on a Pixel 9 Pro, and it's shocking that these issues, along with the others, got past QA.

**Squidalopod** • 7mo ago

Pixel 9 Pro

Top 1% Commenter

Are you still experiencing the same problems?

**UbdU** • 7mo ago

Yes, I am. In addition, I've had randomly silenced notifications the entire time I've had the phone. Auto-brightness is also not working well.

**Squidalopod** • 7mo ago

Pixel 9 Pro

## Summarise in bullet points the issues that users in the last 6 months are having with the new Koren Unicorn mobile v16 upgrade ....

Users have been sharing their experiences with the new Koren Unicorn mobile v16 upgrade, and here are some of the key issues they've been encountering:

### Battery Problems

**Significant Battery Drain:** Many users have reported a drastic decrease in battery life after the upgrade. For example, one user mentioned going from 7 hours of screen time to less than 30 minutes. "I went from 7 Hrs of screen time to less than 30 Mins."

**Heating Issues:** Some users have also experienced their phones overheating after the upgrade. "Battery is now heating and I fear it may catch fire at some point."

**Performance Issues Apps Not Loading:** Several users have reported that some apps fail to load or crash after the upgrade. "A number of apps on my phone will not load properly (instagram, twitter, reddit, whisker)."

**Boot Loops and Bricking:** There are instances of phones getting stuck in boot loops or even bricking completely. "This Update is literally BRICKING the phones by starting with crashes, freezes, and ending with boot loops that go for hours."

**Network and Connectivity Issues SIM Card Failures:** Some users have experienced SIM card failures after the upgrade, leading to network connectivity issues. "Spontaneously I started getting a message 'SIM Card Failure' a few weeks ago." **CarPlay Issues:** Users have reported that CarPlay stops working after the upgrade. "

**CarPlay** not working since iOS18 Update."

**General Frustration Planned Obsolescence:** Many users feel that these issues are a form of planned obsolescence, pushing them to upgrade their devices. "This is planned obsolescence at its finest."

**Lack of Official Communication:** Some users are frustrated by the lack of official communication or acknowledgment of these issues from the companies. "How is Samsung not even thinking of putting any official announcement?"

**Popular-Discipline81** OP • 8mo ago

Actually I had a few problems listed. In reality I installed Android 16 and switched back to 15 with Android flash tool online. The main issues were connettivity and notifications

**Turning-Stranger** • 8mo ago
