Updated Pixel 10 Pro XL AnTuTu score

This was just shared in the other sub.

Looks a bit better on the CPU side, on par with SD 8 Gen 3 but GPU-wise still behind. Thermals are looking good overall.

<https://preview.redd.it/0pcigyr7bclf1.jpeg?width=4284&format=pjpg&auto=webp&s=dbae2a5d1908acfcce627322abf2d391a4fcf81b>

The dude still has an update pending

 125  Reply ...

 **MdDerek** • 6mo ago
Pixel 10 Pro XL

We should wait for the day one update. The GPU score is not accurate before they fix the old driver issue.

Pixel 6a

Any benchmark test for thermals?

[Skip to main content](#)

Create

Yep I am also interested in thermals only, if they are better I will buy 10 pro if not then 9 pro is good

FunkyMuse • 6mo ago

Pixel 8 Pro

Give me Geekbench not AnTuTu

Also dude did not update his phone wtf

Daxino82 • 6mo ago

There is no GPU update yet but they are promising
<https://browser.geekbench.com/v6/compute/4684483>
<https://browser.geekbench.com/v6/cpu/13505386>

SteveBored • 6mo ago

That GPU score is diabolical. My 9 Pro gets 8500. So weird Google haven't fixed this so close to release, reviewers will be doing their reviews right now.

robtom02 • 6mo ago

It might just be that antutu can't read the new GPU? It's happened before when a benchmark app can't communicate properly with a new chip. Either way I'm pretty certain the GPU isn't going to be that bad

SteveBored • 6mo ago

Yeah it's very likely a bug but I'm just saying you would have thought they would have fixed this by now. The release is literally this week

PJivan • 6mo ago

People putting way too much stock in these benchmarks will be my joker origin story.

You're judging a family car by its ability to drag race. Fuel efficiency would make much more sense.

How often are you pushing 100% CPU/GPU utilisation? And compare that to the time your phone is idle while you sleep or work. Which one makes a phone "better"? Big CPU/GPU number or idle power draw/overall efficiency?

Edit: I am sick of explaining this every time so here's a copy pasted chatGPT response.

◆ What AnTuTu (and similar synthetic benchmarks) actually measure

They stress different parts of the system (CPU, GPU, RAM speed, storage I/O, sometimes AI/NPU).

They assign a single composite score based on how quickly the phone chews through artificial test workloads.

This lets you compare "raw horsepower" between devices and chip generations in a controlled way.

◆ Where they are useful

Generational comparisons: e.g., Snapdragon 8 Gen 2 vs 8 Gen 3—scores usually scale with real improvements.

Spotting throttling issues: if a phone with the same chip scores much lower than another, it might be poorly cooled or power-restricted.

Gaming headroom: a very high GPU score can correlate with smoother performance in heavy 3D titles.

◆ Where they fall down

Not representative of normal apps: Real-world tasks like opening WhatsApp, scrolling Instagram, or taking photos don't push the phone like a synthetic test.

Thermal throttling and sustained performance: A phone may ace a one-shot AnTuTu run but collapse under prolonged gaming or video recording.

Software optimization: iPhones often feel smoother than many higher-scoring Androids because iOS scheduling, animations, and app ecosystem are tuned differently.

Cheating: some manufacturers have been caught detecting benchmarks and boosting performance unrealistically.

Not sure if this is AI but for the price they are charging, there is a severe lack in hardware that correlates to performance and battery. I would not buy a laptop that costs as much but has the performance of a 5 year old laptop just because it's running Linux versus windows. It's just poor value "justified" by software

Plus poor performance generally means low efficiency. It needs to use more power to provide equal performance. Look at perf/watt and why it's so important. Not to mention this plays a huge role in how well a device ages

**JollyJigaeBoy** • 2mo ago

I'm riding with this 10 Pro XL until I can't, then it's time to switch. Been with Pixel since the OG XL. Haven't owned another brand since then. This comment has been the best way to express how I feel about Pixel.

**Boss_dad** • 6mo ago

So it means you are justified by this performance at this price range?

**[deleted]** • 6mo ago

I haven't used the phone so I couldn't tell you how fast/snappy it feels to use. These benchmarks are essentially meaningless for the vast majority of users, though. That's my point.

**Boss_dad** • 6mo ago**acideater** • 6mo ago**horatiobanz** • 6mo ago

Top 1% Commenter

Benchmarks inform on the longevity a device may have, on whether or not it will suffer from basic things like stuttering, and there is a direct correlation between higher benchmark scores and better battery life on mobile. Also, it shows you directly the value for money you are getting. You guys hate benchmark scores because the Pixel scores like shit. If the Pixel was killing it in benchmarks you'd be all about posting them and shaming every other phone for being pathetic.

**surprisemofo15** • 6mo ago

Talking nonsense. No point having a great benchmark score only for the device to not be optimised for day to day use. So many Chinese phones have this issue. Great hardware severely hampered by software.

Pixel 10 Pro XL

Top 1% Poster

Has the system update icon there waiting, instead OP is doing benchmarks 🙄

[PrestigiousEcho1468](#) • 6mo ago

Haha the score is massive compared to last with others completely just dismissing the T5

[Tarknim](#) • 6mo ago

Its still fairly low

[d_e_u_s](#) • 6mo ago

Vivo X90 Pro+

It's on the level of the Pura 80 Ultra lmao

[u/TestinyApp](#) • Promoted

Test management that doesn't suck. Lightweight, fast, and built for real dev teams.

**TESTINY**

Easy to use. Lightning fast.
Supports test automation.
Integrates with any tool.
Use in cloud or on-premises.

[testiny.io](#)[Sign Up](#)[JacketOk7241](#) • 6mo ago

Pixel 10

do you feel the receiver is good ? Does it get good 5g as I have a pixel 7 and it is terrible.

[lastdyingbreed_01](#) • 6mo ago

It has Exynos modem, so no

[mmx845](#) • 6mo ago

Pix9 wasn't much better in that department..

Create

as a user of both p7p and p9pxl i can say the 9 was atleast 200x better in everyway, bars, speed, connectivity, range etc, pix 7 was annoying and pix 9 always worked and even much further out

LostCattle1758 • 6mo ago

Show me the Benchmarks with Android 16 September 5th Update!

Then do the same Benchmarks again with Android 16 December 5th Update with Pixel Drop!

Until I see this level of performance accuracy it's all speculation.

I be doing my own Benchmarks with September 5th Update with my new Google Pixel 10 Pro XL 1TB Zoned UFS.

Cheers 🍹 🍷 🍸 🍹

[deleted] • 6mo ago

DesertPunked • 6mo ago

Pixel 9 Pro XL

When you say AnTuTu do you say it with an accent?

jonathanwky • 5mo ago

Did you put it under the AC while it was running the benchmark? Overheating can cause low scores which doesn't fully shows the actual score.
