...

We got Google to listen about the camera stutter! Now, let's help them fix it. [Our Victory & Call to Action] - (Full Investigation & Instructions Inside)

Hey everyone,

This is the follow-up to my [investigation into the Pixel's video stutter](#). And I have good news: **we made them listen**. But the fight isn't over, and the problem is bigger than we thought. Now, I need your help.

Part 1: A Small Victory - We Broke Through!

My journey to get this bug acknowledged was a marathon. I started by sending feedback through the Camera app and my phone's settings. I then created a thread in the [Google Community](#) and even filed a bug report on the [Issue Tracker](#) (which now has over **15 i'm impacted**, thank you! even though it was closed).

The Issue Tracker was a dead end, as they said it was for developers only. But I didn't give up. I started a live chat with Pixel Support. And after presenting all the evidence from our original Reddit thread, something amazing happened: **the Google Support agent officially [acknowledged the problem](#)**.

They confirmed that based on "community reports" (that's us!) and their internal tracking, they know the issue is widespread and multi-generational. Following this positive interaction, I asked for a way to submit my full investigation with logs. They sent me instructions via email, and I have now sent my comprehensive bug report with all the evidence directly to their system. I'm continuing to manage the case with them.

This is our victory, but we need to keep up the pressure.

- **Here is the [proof from our chat](#).**
- **And here is my official case status - "[In Progress](#)".**

This is a huge step, but now we need to keep up the pressure.

Part 2: The New Investigation - The Problem is BIGGER

While preparing my official report, I discovered the problem is not just with the telephoto lens. **It's a fundamental flaw in the EIS algorithm across the ENTIRE camera system.**

- I found similar distortion artifacts in an old video shot on the [ultrawide camera](#).
- Following a tip from Reddit, I tested the stabilizer in **Google Photos** and found the exact same smearing artifacts.
- Finally, I discovered that the **main camera also suffers from the same jerky stutter** at 2x zoom.

This isn't a "telephoto bug." This is a core **Pixel camera software bug**.

I've compiled all of this into a new, comprehensive video investigation. It shows the bugs on all cameras and explains the likely cause.

- **Here is the new [YouTube video with all the proof](#).**

[Skip to main content](#)[Create](#)

counteract shakes. In my video, I include a demonstration from DaVinci Resolve with this crop disabled, showing the black borders and how the frame moves to stabilize the footage.

My theory is this: Google's EIS is so aggressive that it moves the frame too violently. When it hits the edge of the sensor's cropped area, it fails to properly render or stretch the pixels at the border, causing the **wavy distortion** we see on the ultrawide. On the telephoto, this same aggressive software correction fights with the physical OIS, causing the sharp **jumps and stutters**.

Essentially, this isn't a hardware issue; it's a "badly tuned" software algorithm that is shared across all cameras and even the Photos app.

Part 3: A Call to Action - Let's Make Pixel Great Again!

Now it's up to us. We need to show Google the true scale of this problem. We all love our Pixel phones for their incredible software and smart algorithms. Let's remind them what that standard means. We need to demand a fix if they want to compete!

There are two ways you can help: the "hardcore" way and the "easy" way.

- **If you have time and want to make the biggest impact**, please file a full bug report with logs.
- **If you only have a minute**, please send feedback directly from your phone.

We need to show them the massive scale of this issue!

Part 4: The Instructions

Here is a step-by-step guide on how to help.

A) The Advanced Method (Full Bug Report via Support):

1. **Get a Case ID:** Start a live chat with Pixel Support. Briefly explain the issue (e.g., "widespread telephoto/EIS stutter bug") and share the link to my YouTube video or your video. Ask them to create a case for you and follow up via email.
2. **Create & Send the Report:** Once you have an email from them, follow the [official Google instructions](#) at this link to generate and send your bug report with logs.

B) The Quick Method (In-App Feedback): This is also very important, as it creates a high volume of reports.

For Camera Issues: Open the Camera app > Settings > More settings > Send feedback.

1. **For Google Photos Issues:** Open Google Photos > Tap your profile icon > Help & feedback > Send feedback.
2. **For General Device Issues:** Go to Settings > About phone > Send feedback about this device.

In your feedback, please briefly describe your issue (e.g., "My [telephoto/main] camera video is stuttering with EIS on") and **include the link to video with evidence** so they can see the full analysis.

Thank you for reading and for your help. Let's get this fixed together!

UPDATE: The Campaign is now on Twitter (X)!

Skip to main content

Create

Twitter (X) summarizing our entire investigation.

This is a crucial step to get our findings in front of tech journalists, a wider audience, and Google's official social media teams.

Here is the [link to the Twitter thread](#)

Please go to the link to **like, retweet, and comment**. The more engagement we can create there, the harder it will be for them to ignore us.

Thank you for your incredible support. Let's make our voices heard everywhere!

Feedback sent. Thank you! 🙌

dextroz • 4mo ago

Thank you! But also FU to Google for being a \$T company and treating it's customer like sh!t while expecting to be served like a king for mediocrity.

No_Particular7571 OP • 4mo ago

Pixel 10 Pro

That's all true, but public outcry is powerful, after all, and there's hope of influencing even such a gigantic corporation.

...they're gonna...

**daab2g** • 4mo ago

You're not the customer though, you're the product

**Intrepid_Zebra_** • 4mo ago

And removing physical sim. I could deal with what y'all are going through now, but not that.

Waiting for S26

**CauliflowerSayBoohoo** • 4mo ago

Only to see it has no physical sim slot either

**EDMfan_92** • 4mo ago

That's funny because the S26 will probably not have a physical SIM either lol.

**Intrepid_Zebra_** • 4mo ago

First they came for the headphone jack. I kept silent, since it didn't affect me. Then, they came for the physical sim. By then, it was too late.

**Highlight_Normal** • 4mo ago

Pixel 7

You forgot to mention SD card storage

**chufuga** • 4mo ago

This goes hard

**Foreign-Attention805** • 4mo ago

Comments sent!! I hope they listen more to the community and give us a more "pro" experience for those of us who buy their premium phones. I've been waiting for decent video and 5x portrait mode for years.

**No_Particular7571** **OP** • 4mo ago

Pixel 10 Pro

Thanks! Yeah, I hope so too. This is my first Pixel with a telephoto lens. And basically my first premium phone. So I'm waiting for Google to correct its mistake. And I'll fight for it, because I really like Pixels.

Pixel 10 Pro

Hey u/Longjumping_Door_147 and u/BlackPanthaa,

As you requested, here is the new main post with the full investigation, video proof, and the call to action. Thank you for your support!

**SSDeemer** • 4mo ago

Top 1% Commenter

Thank you for your dedication and sharing.

Let me be sure I understand this: the problem occurs across multiple generations of Pixels, and is in the software, not the camera hardware, so it can be fixed with a software update.

**No_Particular7571** OP • 4mo ago

Pixel 10 Pro

Yes, that's true. If there were hardware issues, the stabilizer in DaVinci, for example, wouldn't be able to handle video stabilization. Or any other software. However, at the moment, the problem is only in the algorithms of the camera itself, somewhere at the core level, and Google Photos, that is, in Google software. Therefore, theoretically, Google software engineers can fix this.

**TheTomatoes2** • 4mo ago

9 Pro | 7 | 5a | 4a | 3 Top 1% Commenter

But they won't

[Skip to main content](#)[+ Create](#)

It is precisely for users like you that the problems are not solved. You leave defeated from the start.

When I buy a device I also pay for the software as well as the hardware and if there is something wrong I will point it out. The only tool I have to make the purchase count is by sending feedback and if they really don't listen to me I make myself feel just like the author of the post did. Unity is strength and we can achieve something. Who cares about the useless video boost, we want the quality already from stock, I have to be able to publish the videos as soon as I press the "stop" button and not wait for the backup and then processing.

If you don't own the pixel, pretend I didn't write anything to you because your comment is worth less than zero anyway.

No_Particular7571 OP • 4mo ago

Pixel 10 Pro

Thank you for this powerful comment. You've perfectly captured the entire spirit of why I created this post.

You are absolutely right. Apathy is what allows problems to persist, whether it's with a software bug or something much bigger. We pay for a complete, working product, and providing feedback to demand that quality is not just our right, but our responsibility as engaged users.

Seeing comments like yours, and knowing there are other passionate fans who believe in collective action, is what makes this entire effort worthwhile. "*Unity is strength*"-I couldn't agree more.

Thank you for being a crucial part of this fight.

Longjumping_Door_147 • 4mo ago

<https://photos.app.goo.gl/43CjTuMcTbJqi9U6A>

In the meantime, yesterday I collected my 10 pro xl leaving the iPhone. Now vivo x200 pro and pixel 10 pro will work in harmony, I hope 🙌

Let's make this lens bigger than the pixel 10 series, especially the pros 🤩 In addition to the EIS to be refined, there will also be the objective of making the transition between one lens and another smoother while recording! Come on with the feedback

No_Particular7571 OP • 4mo ago

Pixel 10 Pro

Congratulations on your purchase! I agree, Vivo and Pixel should definitely work together in harmony.

We definitely need to make a big fuss about Google fixing the stabilization bugs and making the transition between lenses smoother 📷

The real question is how on earth did they not notice it when testing themselves and why have they not fixed it already?

**dry_garlic_boy** • 4mo ago**Lopsided_Prior3801** • 4mo ago

Thank you. I've also sent feedback.

Any chance we can put you to work on getting Google to address the GPS accuracy issues? These are my two major complaints about the phone.

**TheBareRomantic** • 4mo ago

Exactly my main issues with the phone as well! I've been in contact with support regarding the GPS issues, and they confirmed they were aware of it. Hoping something gets done 🙏

**linuxgfx** • 4mo ago

Pixel 10 Pro

I have the same problem on both mine and my wife's 10 pros. Both phones exhibit the exact poor GPS accuracy problem and it's so frustrating. The other day using the Uber app caused the driver to call me because it was showing him I was always moving around the block. So frustrating

**No_Particular7571** **OP** • 4mo ago

Pixel 10 Pro

And thank you for your feedback!

Yes, I think the same can be done with GPS. I haven't encountered this yet, since I haven't really used the maps, but I'll try to catch this problem and create a bug report on a new ticket. In any case, by opening official tickets through support, Google can't simply ignore the problem and must record and

Pixel 10 Pro

Thanks for this, you're doing the job Google's QA department should have done years ago.

I went with the quick method and sent feedback directly through the camera app. Hopefully, that's enough.

**No_Particular7571** OP • 4mo ago

Pixel 10 Pro

Thank you too! Yes, Google could hire a couple of Pixel fans as testers and QA. I'm sure fans could polish Pixels and bring Pixel back to the forefront of software development.

**ssspaxe** • 4mo ago

It's been ongoing for so long I doubt this does anything more likely customer support just acknowledging it. Im sure they knew about this long ago it's pretty evident as soon as you open camera. Well, I hope they fix it anyway, I'll consider a pixel 11 finally if the issues are solved.

**No_Particular7571** OP • 4mo ago

Pixel 10 Pro

Most likely so. However, our outcry could help motivate Google to pay attention if they want to restore the Pixel's title as the best cameraphone. At least I hope so and that this is really so and not something that is being passed off as reality.

**bozhodimitrov** • 4mo ago

Pixel 10 Pro

I did send a report, but it will be a miracle if Google fixes this. This stutter and artifact bug ruined so many memories that I don't have hope they will change anything.

The way we have to literally beg for fixing this is just sad. I wish this wasn't the case, but it is, and I grew up with the Android ecosystem. I think the only way for them to listen is to actually vote with our wallet. But this requires strength and ability to adjust to a new platform or phone brand.

[Skip to main content](#)[+ Create](#)

Pixel 10 Pro

Yes, it would be a miracle. But on the other hand, maybe no one has really tried to raise this issue on a large scale before? What if Google is stuck right now because we've banded together and started pointing out their blatant mistakes? At the very least, I hope that our feedback and bug reports have indeed set a precedent.

I understand, yes, changing an ecosystem is always difficult and unpleasant. But if we're stubbornly ignored even after such a huge outcry, we have no choice. Especially if you want to preserve good memories through video...

**Any-Bird457** • 4mo ago

Pixel 6a

hello op, can u help to feedback google to the [inconsistent highlight suppression between the Pixel viewfinder and the final photo?](#)

**No_Particular7571** OP • 4mo ago

Pixel 10 Pro

Hi! I've read your material and honestly, I can't replicate the photos exactly, I simply don't have such bright neon houses 🙄 But, I encountered this problem back when I had a Pixel 6a. Especially in winter, when there was a lot of snow, the warm lampposts became cold in the photo. I found a solution to the problem without even using RAW. Or just adjust the white balance to warmer tones. Try this and let me know. Unfortunately, my city is not that bright, not at all.

I'll send feedback on this topic!

**Any-Bird457** • 4mo ago

Pixel 6a

thx, love u

**Apprehensive-Bug9480** • 4mo ago

Man thanks really for your effort this issue you know it's taking me crazy, I'm the guy that posted the "shaking" video. Hope they will fix soon and that isn't a hardware issue.

**Longjumping_Door_147** • 4mo ago

Guys, from this recent test the Pixel 9 Pro XL is even better than the 10 Pro XL 🤔🤔🤔🤔 Google Google goooooo what are you up to?? <https://youtu.be/EUDogeQCVc8?si=LN6klm5UeU7yNffZ>

Thank you bro!

**Longjumping_Door_147** • 4mo ago

Oh my goodness guys, this pixel on the video side is a disaster, I'm from an iPhone 17 pro max, I want to cry 😭😭😭 Spectacular UI but the "video" mode is mid-range. I feel nauseous. There still remains the problem of too much noise in the dim areas, it's excessive! If it were just the problem of stabilization. 🤔
🤔 There are too many things wrong, nothing is right.

**IndependentTourist47** • 4mo ago

any updates ?

**No_Particular7571** OP • 4mo ago

Pixel 10 Pro

Not yet. The update from **APKMirror doesn't fix anything**. And I still haven't received the update directly through the **Play Store**. Looks like the rollout wave hasn't reached me yet - EU seems to be dead last on the list... 🤔

For context, support told me back on October 11 to check if the fix was applied, but as of now, the update still hasn't arrived.

I suspect the APKMirror version might be different from the one that's supposed to hit the 10 series first. And if I don't get the update soon, I'll file a bug report based on what's currently available.

**[deleted]** • 4mo ago
