gabbuo31 Pixel 10 Pro XL 📱

What is your experience with the Pixel?

I want to hear opinions of people who actually have and use the device and are not biased by sponsorships. I am having a hard time learning about the pros and cons of Pixel phones that are not biased in one way or the other and I figured I'd ask people here. Hopefully this is allowed in this subreddit.

In general? Software is very good. Camera top tier. Everything else is plenty good enough.

I don't play games but I'm a heavy camera user (mostly pictures). Used a 6a for years, then Google decided to kill my phone due the infamous battery problem of some models. Got a really cheap 9pro a couple of weeks ago and... it's everything I wanted but on steroids. Huge jump, great phone, really happy with it. But I will never buy an "a" model ever again after the 6a.

**[deleted]** • 6mo ago

This is so on point, dude. i had exactly the same experience with 6a. How's the camera on 9 pro? miles ahead of 6a or slightly better?

**TheTomatoes2** • 6mo ago

9 Pro | 7 | 5a | 4a | 3 Top 1% Commenter

The 30x zoom, Add Me and macro are clear differences

**Nyanzerfaust** • 6mo ago

It's a 3 generation jump, everything is way better, but nothing too huge, pixel phones always had good cameras. But I can take 50mp pictures now and the telephoto and optical zoom are great (6a didn't have any of this). It's an excellent upgrade if you can still find dirt cheap 9pros.

Pixel 8 Pro

I've owned pixels from the 3a to the 8 Pro (purchased when it debuted), I'll say having the latest version of Android is great, with the P8P, the build quality is great... not to ding the earlier versions, I honestly just don't remember them that well.

Androids tend to have features before the iPhone, which Apple just copies, polishes up with a another UX albeit more restricted, and markets like they invented the wheel. One gripe I have is that Google pretty much refuses to support multi-speaker Bluetooth. We know it's possible because Samsung did it years ago with one of their flagship models. If technology has advanced, I'd imagine it's even easier to do now. So it's frustrating that Samsungs can do it, Apple can do it (as long as it's with their own devices), but Pixels can't.

And yes, I know about Auracast. I get how it works, it's cool, I guess only available on 9s and up (when I go to Settings > Connected Devices > Connection Preferences, it's not there, yes I'm on the most recent update). But my point is that Samsung did it before Auracast was invented and it does not require Auracast-capable devices. I just want to be able to play audio to two speakers for my kid's birthday party or during a backyard cookout without having to go through a bunch of hoops, and I think ****Google's Flagship** phone series should be able to do that.

Pixel 10 Pro

I love my pixel 7a. It can be a little glitchy at times, though nothing too bad. The useful features like call screening and at a glance are just so damn helpful and the software is so smooth and bloat free. Also the photos can't be beat. The good definitely outweighs the bad.

Do note that this sub is obviously going to be biased.

**gcarline2092** • 6mo ago

I've had 2 pixel phones. I preordered the P6P and used that one until I got the P8P. I preordered the P10P XL and plan to use that one at least 2 years or more. What I like the most about the phones are the camera and the AI features. Call screening is definitely one of my favorite features, it really comes in handy. As far as everyday activities, calling texting, taking pics, watching YouTube, scrolling social media etc the phone is more than enough. Both the P6P and the P8P have been snappy and responsive, haven't had any glitches or anything. I'd say you're a heavy gamer and playing some top tier games on your phone then Samsung/iPhone seem to perform better. Although battery life isn't horrible I feel like it can definitely be improved. For example sometimes I may get 6-8 hrs of screen time and other days I may get 4-6 so it can be a little inconsistent.

**pseudo-nimm1** • 6mo ago

Pixel 7 pro. Still really enjoy using it, had it about a year and a half, no intention of upgrading, got it for a bit of a bargain price at the time of £430. Telephoto camera is still pretty amazing.

Using nova launcher and set it up nicely with apps and utilities in two separate drawers. Have to overlap some widgets to get them to display properly, but can move to back if they affect usability (eg invisible part of weather widget was on top of calendar, so couldn't switch months).

Don't like the way manual camera controls are hidden/unavailable, was better on my Samsung having iso/shutter/wb/aperture available. ultra HDR is ok, but some photos look better before they're 'tweaked'.

[Skip to main content](#)[Create](#)

Also, I don't use Google photos (or drive), I use my own NAS and Google photos really doesn't like that, but I can work around it.

Hope that's useful?

Edit ; +1 for call screening, it's fantastic.

harvoishappy • 6mo ago

Pixel 6a

I'll be honest with you. My 6a is awesome to use. I'm talking about regular usage. It's very smooth and snappy. I've used it for 2 years now and it never feels old. I just love it. But... Hear me out. It overheats a lot. That's the only issue I'm facing. But I've learned to live with that.

papadrach • 6mo ago

Top 1% Commenter

I've used Galaxy phones for 15 years, and pixel the last two. Last two years I've also owned simultaneously a Pixel 8 Pro / S21, P8 / S24U, P9P / S25U (current).

I'll give credit to Pixel in these regards: the UI is simple and effective. The haptics are great. The call features are great. Some UI element are great but not functional spectacular. It gets the job done as a phone.

My gripes come with quality. Both P8 phones has screen defects prompting a return. The materials are sub par. So even a person who's very aware of not scratching, dropping, etc my phone's : the pixels don't hold up well so a screen protector is a must along with a case. The cameras are good but not great. Point and shoot and selfie would be the bread winners but lense transitions, zoom, stability are just OK in the flagship world. The OS and chipset seem to be average. It's what I was experiencing back in the earlier says of Android that I'm seeing with my Pixels now. Screen won't rotate. Apps won't open. Screen becomes unresponsive to input or won't refresh what's being displayed (frozen). Phone runs warm. Animations become jittery or laggy time to time. Scrolling is a hit or miss in fluidity. Battery life is decent but drains more on cellular I've noticed, and also runs warmer.

When comparing to my S25U. The only thing I can say it doesn't do better in "implementation" of haptics. It has good haptic motor, but poorly implemented. It doesn't have all the nice call features BUT it's not something I rely on often. And lastly, the S25U doesn't have the nice 6.3in form factor that I like. I could go more into details on this phone and why I prefer it, but I'll save my thumbs unless warranted.

Hope this helps. I want to like and use my Pixels more. But it's more annoying to me than my other phone that just works better for me.

elmariachi1911 • 6mo ago

This is really helpful! I'm using an S23 and thinking about getting a Pixel 10. Could you elaborate on

- camera: how does it compare to Samsungs?
- general UX: it seems like your experience is that Pixels are behind Samsung here?

[Skip to main content](#)

Create

**papadrach** • 6mo ago

Top 1% Commenter

It's hard for me to compare the P10 series as no one has it or has reviews so I'll have to compare my P9P with my S25U

Camera - the pixel has better exposure for point and shoot pictures. The Samsung you have to adjust it to your liking or focus better on darker subjects. I noticed this alot with my bernese mountain dog. While the colors and sharpness was nicer on the S25U, the details in his dark fur was harder to notice compared to the Pixel. However I like the S25U due to more accurate colors (believe it or not) and a sharper image. The selfie camera on the pixel is better for handling light, more FoV and details. No disputes. However the sound quality between both lends to the S25U. The zoom is S25U hands down. In clarity and post processing. The Pixel does take photos in motion better more often than not, but the S25U is a hit or miss with photos. You can edit this to take quicker shots and less processing or use Motion photos/ one take. Shockingly enough I took a picture of a helicopter the other day flying past and got a great picture on the S25U and a picture last night of a SW plane that was all blurry on my P9P. Extreme examples. As far as video goes. S25U hands down. Great lense transitions, better stability, and easily to use. No needing to wait hours for post processing. No joke I took an 11 second clip indoors and it took 2 hours to process via "Video Boost" and it marginally looked better. Last example: I needed to take photos quickly of my finances wedding ring. Was dailying the pixel and leaving for work. The P9P couldn't not focus the ring well at all. Tried multiple positions, lighting angles, and backgrounds. Frustrated I ran in side. Grabbed the s25U and got all the photos I needed in great quality in seconds. So I think the focusing and portrait shots are much better on the S25U. Just easier to use and definitely more confident inspiring unless you just point, click, and move on without worrying how the shots come out.

UI: pixels are simple but offer less options. The animations seem to stutter more so despite having nice animations. The stutter I will see kind of throws me off. I don't think it's as intuitive in some of the quick settings, gestures, animations, customization and flexibility. Goodlock has easily surpassed anything the Pixel UI had to offer. It's a different style. It's not bad but it's not great. It's just different and limited. The only experience I like is the haptic feedbacks and small nuance animations are nice but that only goes so far. I don't like googles widgets. I don't like the freedom restricting of the UI which affects my experience. I have seen more apps and screen in responding on this phone in the past 2 years than past 5 years with S21, S24U, S25U. At least my screens rotate when I want to watch a video in landscape. It ALWAYS happens on the Pixel where it just won't rotate. The Galaxy phones for me just work as intended and I haven't had an issue. Only issues I've had are battery drain on the S24U was more noticeable after a One UI 7 mid year update which put it on par with my P9P, but my daily S25U still easily outlasts my Pixel in daily use and standby. And it runs noticably cooler. There's more nuances to apps I don't like. Every one complains of bloat but honestly I uninstalled many Google Pixel apps and am already using Google Messages, Photos on my Samsung so whatever. I prefer their Notes and Calendar, and Weather anyways vs Pixels alternatives

**elmariachi1911** • 6mo ago

Great info dump. Appreciate it!

[Skip to main content](#)[+ Create](#)

Don't switch. I used to have a Pixel 8, and it somehow managed to be way glitchier than my new S25+. And the S25+ has 1.5x the processing power of the Pixel 10 - a little less once you take power consumption into account, but still, that's more a whole year's leap ahead.

If you need more evidence, look at the EU filings. The Samsung phones are all rated for 2,000 battery charge cycles, whereas the Pixels are rated for 1,000, and the Pixel 10 comes with a mandatory feature that takes extra battery life away from you. Look it up. The Samsung, on the other hand, lets you choose to limit battery capacity. It also lets you slow down the processor slightly (5/6 the speed) to get about 1.1 - 1.2x more battery life, which is a feature I absolutely love. That's absent on the Pixel.

Pixel 10 Pro

Love pixels. Worst things for me are mediocre battery life, delayed notifications now and again, and probably the price for what is essentially mid tier hardware.

rstokes18187 • 6mo ago

Pixel 10 Pro XL

Pixel 2XL, Pixel 5, Pixel 7 pro, upgrading to 10 pro XL. I was a fervent Apple user and I have never regretted switching to Google.

krischiaf • 6mo ago • Edited 6mo ago

So, I have had Pixel since the very first. The only one I didnt get a version of was the 5. While having those Pixels, I also had a couple different iPhones - the last being the 14 pro max, a couple samsungs - the last being the 25u, and even a One plus 6t at some point. I've also had the samsung z flip 3,4 & 5 and the Motor Razr 2023. I think thats all.

- If you value ecosystem, gaming, or the latest hardware Samsung and Apple are probably your best bet here
- If you are looking for best bang for your buck in terms of hardware, its probably Samsung
- If you value communication & information, the Pixel is equally as good
- If you want to know what a phone can do for you, Pixel is a great phone

Any time I have paused on my Google phone to use others, I always come back for their specific Screen Calling, Visual Voicemail, Hold for me, implementation of other certain features that I might recall the names of when I wake up more. Lol I also use google/gmail/etc for 90% of my services so having a phone

[Skip to main content](#)[Create](#)

pixel for just the camera anymore (although Im excited to see what the 10 pro XL does)

I like having a phone I dont need to think about, and the Pixel phone it top notch for that. I dont need to climb through menus to find what I need. The simplicity of its OS is nice. I do use Nova Launcher for being able to change my icons, but I hear that's in the works for stock Pixel now. Having only Gemini/Google assitant is easy. I can ask it to perform almost anything for me that I require (and its getting better at that). In fact I know there is a lot of the phone I probably still dont utilize like I could. I dont play heavy graphic games, but the phones, and older Tablet, have always handled most games fine. I play xbox cloud and a lot of emulators fine on it as well.

I dont expect more from it than it shows me. My only issue with the whole line is the lack of a solid ecosystem. The watch is awesome, the buds are nice but not the best (sound is nice), the tablet is not really existent- they arent planning a new one for a while if at all. No ring in the works, not a big deal but I got used to Samsungs version and would like to see a Pixel. I value all of these falling under the name maker since they all work together for me (ex, I dont like having a pixel phone, apple airpods, samsung tablet, Oura Ring, etc) and thats totally my issue but it would be nice to have it all under the Pixel Line.

The biggest thing I would say is if you take issue with having AI in your face, you might not want this phone. lol

I dont know if this helps at all. Its a great phone if youre willing to get to know it and dont need the fastest, strongest chipset out there. It works exactly as it they tell you it will (and probably not much more than that).

Edit: spellcheck. lol

gabbbuo31 OP • 6mo ago

Pixel 10 Pro XL

That is helpful. I'm not a big phone gamer, I really only use Reddit and YouTube mainly, otherwise thats it. I currently use an Oura ring, Pixel watch, and Bose earbuds with my Samsung phone, so the ecosystem thing isn't that big of an issue for me. Everything should transition to the Pixel nicely if I do upgrade to a Pixel.

Zeus161616 • 6mo ago

Ive owned the 2, 4, 5a, 6 and 8....all Pro where available. Only issue I have ever had was I dropped the 4 off a rockface in the mountains and the LTE antenna broke. Thus the move to the 5a. Not a scratch on the phone which was amazing considering the significance of the drop. Case was a bit scratched up. Every phone has been awesome for me. Im all in on pixel....have the watch, pro buds and tablet as well. So yeah, I'm biased, but biased because it's all been so awesome for me. I should also note as I have moved on from phones every two years I handed down my old one to my kid who went in to use them for another full 2 years till the next hand me down and zero issues for him with those phones although a couple of them did start to see some diminishing battery strength over time. But not enough to negatively affect the overall usage.

andrewbenedict • 6mo ago

[Skip to main content](#)[Create](#)

...which is really, phone / etc, some games like chess or cards and web browsing.

The only gripe I have at times is battery life which has improved some with the 9 but since I am never far away from a charger is no big deal breaker.

SRFast • 6mo ago • Edited 6mo ago

Pixel 8 Pro | Pixel 4 XL | PW2 Top 1% Commenter

Where do I apply for my sponsor? It isn't good to assume people that give Pixel devices positive reviews are getting paid to do it. Despite this sub, people actually have positive experiences with Pixel devices and enjoy using them.

BTW..Nexus 5, 6P, Pixel 1, 3 XL, 4 XL, 4a5G, 6, 7 & 8 Pro - No issues.

Jumpy_Patient2089 • 6mo ago

Google is like if Samsung and Apple had a baby to me. They have good hardware, not the best like Samsung, but good. And their iOS is top notch like Apple's. Samsung I can't stand their overlays on the android iOS. Apple I can't stand the same bland phone since the iPhone 11. So Google is the perfect middle ground. Every year, I would cycle from a Samsung to an iPhone. This year, I stuck with the pixel the entire year. First time in like a decade I do that. I just didn't need the feel to switch since this provided me everything I could ask for.

hey_you_too_buckaroo • 6mo ago

Pixel 6

It's alright. Security updates, no bloatware and ads, most things just work. What's frustrating is Google and their constant meddling that breaks things, removes features, or updates that make things worse cause designers don't know what actual users want.

pockypimp • 6mo ago

Pixel 7

I've used the Pixels from the OG, 3a and the 7. Software is good, lots of features that I wish others adopted. Camera is very good. People tend to get stuck on benchmarks for the chips versus what the actual usage is like.

Mitchellmillennial • 6mo ago

Professional YouTuber and cinematographer. I've owned 5-6 pixels from the 6-8 pro and just switched to Samsung.

Performance is fine, devices feel snappy. Camera colors are great, everything else is average. Pixel is very much the iphone of android and Samsung still feels like android

[Skip to main content](#)[Create](#)

I'm using Pixel 6a for more than 2.5 years.

Software - Best thing about the phone. it's plain, simple, no nonsense, minimal but kinda barebone. i didn't mind because I don't use 1000 options the custom roms have. Love the Pixel ui and really loving the new material 3 expressive update.

Camera - In daylight it is still really good. 10-20% of the time it clicks a bit desaturated photo but i really like the colour tuning hdryyyy look.

Night photography is bad in terms of noise, night samples are a noisy mess but bright. PORTRAIT MODE IS STRAIGHT UP TRASH. trust me i clicked max 10 portrait mode photos in 2.5 years, it's that bad. VIDEO IS ALSO BAD, NOISY AF. but lens switching and all is smooth, the issue is the sensors are really old.

Battery - as it's a compact phone the battery life used to be decent when the phone was new. for last 1 years the battery is straight up trash. i had to charge my phone thrice in a day if i play games even for 30 minutes. i'm kinda heavy user. This is my usage with 100% wifi, if i use 5g then i might have to charge it 4 times. Google nerfed many Pixel 6a's battery due to some issues and impacted devices got 100\$ compensation, i didn't receive any but battery life is shittiest shit.

BATTERY LIFE ISN'T GOOD FOR PRO DEVICES ALSO. GOOGLE IS CONSISTENTLY KILLING BATTERIES OF A SERIES, first 4a, then 6a, heard same thing about 7a, next in line is 8a and 9a.

Performance: My 6a is still really smooth for day to day usage, phone absolutely flies with ease, rarely lags but the moment i push the phone even 10% more, it gets hot. If i edit my photos on google photos for 10-15 minutes, it gets hot. if i use magic editor for more than 5-7 minutes, phone gets hot.

Main issues: Poor network coverage, thermal issues, painfully slow charging speed, shitty battery, shitty portrait mode, decentish night camera.

Moral of the story: Pixels aren't worth it even the Pro series.

NOTE: I USED TO BE A PIXEL FANBOY AND DEFENDED PIXEL AT EVERY OPPORTUNITY I GOT ONLINE but last 1 year my love faded away. I bought Oppo reno 14 a month back and this phone sooooo much better, Pixel 6a launched at a higher price than reno 14 😂😂

TheRealFrantik • 6mo ago

I've had 9 or 10 different Pixel phones, between base models and a-series. My opinion is: in 2025, any phone will work perfectly fine. The Pixel is no exception: it works fine.

My biggest gripe is, the Pixel is 100% a midrange phone, but it's priced as a flagship. The build quality is unreliable (check all the posts about buttons falling off, parts breaking, faulty displays, motherboards dying, batteries swelling, camera pieces detaching, etc. This doesn't happen with other phones of the same price).

The processor is borderline bad, but again, any processor in 2025 will work fine...but to call this a flagship processor is basically Google spitting in our faces. So in terms of flagship processors, it's a bad chip. In terms of midrange processors, it's an average chip. I recently bought a \$275 Nothing CMF Phone 2 Pro, and it performs exactly the same as my Pixel 9 did. In fact, scrolling actually feels faster on this phone that was almost \$500 cheaper.

[Skip to main content](#)[Create](#)

the camera department, and all the other competition has caught up and is slowly surpassing Google. Not to mention, Pixel is actually falling further behind due to making their AI overprocess images, with no option to disable this. I always loved how instantaneous the shutter button was, but recent reviews/reports of the Pixel 10 show that the shutter is now lagging because of all the AI features. So now, the Pixel camera is no different than all the others.

So in short, it's a phone: it'll work. But in my opinion, it's absolutely not worth the price. Base Pixel phones should be priced at \$499, Pro should be \$599, and the A-series should be \$399. They'd rule the midrange market, which is way better than floundering in the flagship market.

**elgrandorado** • 6mo ago

Experience owning phones: My first serious smartphone was an iPhone 3GS, then I owned an iPhone 4 for a couple of years before switching to Android. I owned Moto phones for a fair bit due to their close to stock android + moto gesture features. I even owned a Xiaomi Pocophone F1 for a year (imported).

As I got older, I lost the time to tinker, run emulation, and game much really on my phone so I moved those to my gaming PC and Steam Deck. I moved on to a Pixel 8 Pro a couple of years ago almost due to the Google integrations matching up with my company on Gsuite apps. That was my first Google phone experience. Now I'm on the Pixel 9 Pro because last year's trade-in promotions were really good.

Pros:

Battery Life is solid on these phones, easily can last a day on light usage (if not two if you push battery saver). The screen is very bright and easy to see at any time. Google's android implementation and quality of life features bests anything I've ever used. I had an iPhone 13 Pro for a year and a half, and the loss on raw horsepower was more than offset by the care that Google's version of android has (call screening is top tier). Pixel cameras are also phenomenal photo shooters. Some of the post processing is wack, but that seems to be endemic to all major smartphone manufacturers that sell in the US.

Cons: Mediocre chipset is not meant for "pro" users. I use my phone for web, YouTube, social media, and work. If I had to do content creation, or I was a gamer, or I did any sort of on the fly video/photo editing, this would not be the phone for me. The Tensor Chipset finally figured out the efficiency issues in the G4, but the power is not there. Throttling in all intensive situations happens pretty quickly, even with the new heat sink. Another issue I have is with Google Assistant. Gemini is amazing for many things, but Google Assistant has basically stopped working since being folded into Gemini. Simple commands don't work for me anymore.

All in all it's an amazing phone for the right people (like myself).

**GamesnGunZ** • 6mo ago

Pixel 9 pro XL 512 gb and it's the best phone I've ever had. I will later this week be switching to a Pixel 10 pro xl 512 gb because my SO decided she wants to upgrade from her iPhone 13 and I'm giving her mine.

[Skip to main content](#)[Create](#)

android auto etc. + Being a hotspot)

Caspid • 6mo ago

Pixel 10 Pro

Android vs iOS: I've used iPhones, but I greatly prefer the customization options that Android affords - I use a custom launcher (not as intimidating as it sounds) so I can make things look/operate exactly how I want.

In terms of Pixel vs other Android phones: I prefer a "vanilla" experience without the extra bloatware from Samsung etc. Pixels get updates soonest too. I've had a Pixel 2 and 6a. The camera on my 6a is great, but is showing its age with resolution and zoom, which is why I'm considering updating.

Gator1523 • 6mo ago

I used to have one. My Samsung S25+ is way better. The faster processor makes a huge difference, and I got it on sale for \$700 on Amazon. The phone is 7 months old but still ahead of the Pixel 10 in many ways, so you can get it on a discount.

bnr32nis • 6mo ago

gwSif • 6mo ago

Pixel 9 Pro XL here. I bought a Pixel Watch 2 last november for black friday and it impressed me enough to swap over from my aged but legendary Galaxy Note 9 in March of this year. I've been in love with it so far. Fingerprint sensor works great. Cameras have been so nice but honestly I had been living for almost a decade with Samsungs kentucky-fried sharpness filters and obsession with toning up the saturation so I suppose it sorta depends on whether or not you like that look. Personally I have a lot of scenarios where there's lighting (like golden hour for example) that other phones just don't capture correctly that my pixel will just nail.

Hold for me, Call screen, and all the other little pixel extras are just so nice also. I used to get regular spam calls - not anymore. For some reason they've just quit calling lmao. Kinda sad since it was fun watching it screen those calls and listening to the resulting recording afterwards.

For build quality I've been in love as well though to be fair I keep mine in a Poetic case (revolution I think?). It lets me use magsafe stuff on the P9PXL without an issue. Didn't feel like waiting for the 10 lol. I've enjoyed my experience enough that I actually finished the trifecta out and got some Pixel buds as well. Basically I completely cut over from samsung and haven't looked back thus far.

I get updates immediately. I get new features monthly. I already was in absolute love with the material design aesthetics and Material 3 Expressive is just more of what I already love. I have actually useful AI features, many of which exist onboard my phone instead of phoning home.

I only had one small issue with some internet connectivity but I discovered that there was an issue where for some reason the VPN was trying to turn on for mobile data. I think it was a bug but idk. I toggled it off

[Skip to main content](#)[Create](#)

I'd only say not to get it if you use your phone primarily as a gaming device. I play CoD mobile on mine for an hour or so at a time and emulate some PS2/PS1 games and its fine and hasn't gotten more than a little warm for me but if you were intending on replacing your steam deck or something with it you might have a bad time.

TL;DR

phone good. it gets good updates, feels good, has actually useful features, isn't bloated, and has an industry leading camera. Probably not great for someone who plays a lot of graphically intensive mobile games, but also you're probably not looking at a pixel if you play those regularly anyways.

37OpenMind • 6mo ago

Used to have Samsung, Xiaomi, iPhone. When I bought a pixel 7 pro, which is my current phone, I felt it was everything I wanted. Smooth, good construction, incredible photos. Give it a try and see for yourself. Ah, and always updated to Android last versions. If it matters to you.

MrNegativ1ty • 6mo ago

I have the 8 Pro and it's fine. Takes nice pictures. Plenty smooth enough for day to day tasks despite the endless whining and bitching about the tensor chip on reddit.

[deleted] • 6mo ago

nobody whines about Pixels' day to day performance. People use a smartphone beyond whatsapp, youtube, calling, are you aware of that bro? 🤔🤔

ssshaneee • 6mo ago

Pixel software is very buggy

BornFruit9627 • 6mo ago

It's a really solid phone. I have owned Google phones since the Nexus 6p. I loved the consistent upgrades and features. Great camera and great software. If you are a person who plays high end games on their devices, you may have issues but I imagine that isn't most people.

-Twyptophan- • 6mo ago

Pixel 10 XL Pro (RIP P2XL)

My phones went from iPhone 4->iPhone6->galaxy->pixel 2XL->pixel 4XL->pixel 6 pro-> pixel 10 pro XL.

**Crafty_Algae_485** • 6mo ago

I have had 4 Pixels and am going from 7 pro to 10 pro.. wife has always had Samsung.. I like the "clean" functioning .. no Bixby or other crap.. y photos and editing always get noticed by others when I show them pictures. I like the compatibility with external items BT speakers or apps.. I like how Apple friends get pissed at green bubbles..

**Efficient_Loss_9928** • 6mo ago

I have used Pixel 6 Pro, 7a, 9, and 9 Pro Fold. Currently using Samsung Fold 7 and iPhone 15 Pro Max. Here are my experiences.

Software Experience:

It is ok, Google's UI is nice and polished. However compared to Samsung One UI, you lack a lot of features, such as proper polished pop-up window support, and customizations from Good Lock.

This is especially pronounced in the foldable segment. Pixel's multi-tasking feature is literally worse than an iPad mini (even just with iOS 18 you can have splitscreen + flyover, while Pixel can only do splitscreen, and in ONE FUCKING ORENTATION). I personally find that to be not acceptable.

Performance:

Tensor chip is good enough, you will not encounter lags from day-to-day use. However intensive gaming is not an option, it will not run demanding games.

Build Quality:

After Pixel 8 the build quality have been top-notch. Apple quality for sure. 6 was shit though.

Thermals:

It is fine for newer Pixel devices.

Camera:

I honestly think there is no point on discussing this, you can take good photos with any flagship phone. It is all about your own skill.

For videography, just get an iPhone, nothing beats it.

Pricing:

Ridiculous. Always get it on sale, or with good pre-order deals.

business stuff - the Google integration of apps is spot on. As someone who enjoys the simplicity of Apple and uses Apple as "family" phone (everyone in my family uses Apple so I have to for medical calendars etc) - I absolutely love my Pixel. I've upgraded to 10 pro from 9 pro XL - needed it slightly smaller. Only thing I didn't like is how easy the screen gets marked - I'm hoping that's improved but still ordered a folding case. Battery is fantastic. If I wasn't tied to the Apple eco system I'd use Google for both phones.

I do rate it and I hated the first & second pixels. I rate pixels above Samsung ¹⁰⁰

**hectorlf** • 6mo ago

I personally like the Pixel UI, plus I don't have to deal with the other brand's alternative apps (that you often can't remove or even hide unless you root your phone). This obviously only applies if you are a heavy Google user. If you don't care about Google services, Pixels aren't for you.

The camera being top tier is also a plus, but it's not my main priority.

**[deleted]** • 6mo ago

I've had the 6a and 9 pro xl. Pixels are great experiences, but you have to temper your expectations. Most android devices can be found on sale or with a good trade in. But at MSRP, pixels don't compare well against iPhones and other high end android flagships from a hardware standpoint. The real selling point is their software. Over the last couple of years, they have leaned more and more in ai which can be really useful. And they do have pretty frequent software updates that offer some really useful features. But out of all the android brands, the pixels tend to be the smoothest and have the most useful features (but not the most feature rich or customizable).

But there are still quite a few short comings in terms of gaming performance and when the phone is under load. Most pixel users don't really use their phone for anything super stressing outside of photo editing and processing. They have improved the performance though year over year by a good margin so these issues will hopefully get better.

If you want a well spec'd phone with really clean and smooth software (similar to iPhone) it's worth a try!

Pixel 8 Pro Top 1% Commenter

It's good

**SirVampyr** • 6mo ago

Pixel 6 Pro

[Skip to main content](#)[+](#) Create

every phone?

Phones always felt fast, never Buggy, camera always top tier.

Only con I'd say is the fingerprint reader on the Pixel 6? Iirc first time they introduced it, so it has some miss-reads. But afaiK it's good in the newer ones. (Tbh, I still want my fingerprint reader on the back. Pixel 2, my beloved...)

Parking-Safety12 • 6mo ago

I've had the OG Pixel 1, Pixel 7, and Pixel 9 Pro, and they have all for the most part been pretty great! The Pixel 1 is honestly probably my favorite phone I've ever owned, maybe it's part nostalgia, but it was just such a nice piece of hardware. Buold felt solid, I dropped that things many times as a careless teen, nothing to show for it. I had that for like 3 years. The 3 didn't impress me all that much and the 4 had some...issues...so I went on Pixel hiatus until the 7. A beautiful piece of hardware for sure, but I had a LOT of software bugs, not to mention the horrible battery life. Upgraded to the Pixel 9 Pro just under a year ago and I love it so much, I feel like we're back up to the quality that I expected back at the start of the Pixel program. Camera is amazing, to die for, honestly. I love shooting photos with this thing. Battery life is great too. Thermals and performance are fine, could be way better. I've always loved Google's software cause most of it feels genuinely helpful and I can always ignore or disable shit I don't care about. I preordered the Pixel 10 Pro XL for the hell of it, might keep it, but also might return it cause I love the 9 so much, but my trade in deal (plus the fact that I got the 9 on heavy discount) made me wanna jump for it.

Tensor Pixels have never benchmarked great, but real world performance has always been solid for me on the 9 Pro. I really need to meet a list of requirements before I notice anything. But it can be an issue for some, I've heard people that live in hotter climates tend to have issues with the thermal throttling more. For normal use it's great, I don't game much but I go through phases with Wild Rift and Pokemon Unite and they're stable. Won't be able to max things out, but it's a phone game so I don't care.

I've been a generally happy customer, albeit frustrated and confused at times with some of their decisions, I mean it's Google we're talking about.

RickyFromVegas • 6mo ago

I have had almost every pixel phone and the Nexus before that, and I personally think pixels have always been at the forefront of actual consumer needs.

At least here in the western USA, I haven't had any issues that's a deal breaker and while I always yearn for new, faster tech, but always come crawling back to pixel.

prisms026 • 6mo ago

I am not a die hard Pixel fan or a super knowledgeable phone user, I just have my own personal preferences. I have a Pixel 9 now but my last two phones were OnePlus and overall I regret my decision to switch to Pixel. I use Nova Launcher because I really didn't enjoy how the stock Android looked or

[Skip to main content](#)[Create](#)

OnePlus battery life and fast charge was also incredible. The Pixel does fine if I'm at work, and not on my phone much, but when traveling or going to somewhere like a concert or sports game which could entail photos or video, I tend to worry it will run out of battery. There are other things like gestures and the menu shade (?) that just seemed more intuitive on the OnePlus OS than on the Pixel. Just my two cents.

**Biglgloo4192** • 6mo ago**Severe-Spray-5716** • 6mo ago

I have the Pixel 9 Pro XL, which I purchased on February 3 in Mexico, a country where it wasn't officially sold. I've always liked Android when it comes to software. In that regard, the phone is beautiful, as they say, excellent in terms of software. However, comparing it to the Samsung Galaxy S25 Ultra (which my wife has), I don't really see an advantage; on the contrary: the Samsung camera is better, the battery lasts longer. Regarding AI performance: if you pay for the Plus version of the Gemini, you don't really see a substantial improvement. Would I change it for a Samsung? No. Would I buy it again? Not really. I feel that by being outside the countries where they officially distribute them, I can't get the most out of the device. My overall experience: meh...

**OtherTechnician** • 6mo ago

I've been using pixel phones since the Pixel 1. Over the years they have proven to be reliable and have had great features. I only had one that I needed to contact support for a problem with the fingerprint sensor and it was replaced promptly.

I've had them all except the 3, 5, and 9. I skipped the 3 because I really loved the 2. I skipped the 5 and 9 because they were obviously placeholder models and did not offer enough of an improvement over the prior model to interest me. I will say that the ones with Samsung derived chipsets had subpar modems which impaired cell service.

**NecTYY-** • 6mo ago**mynameiserrlll** • 6mo ago

I like my 7a except for the new Gemini AI. If Google doesn't fix Gemini I'm not buying another Pixel.

**Miliean** • 6mo ago

I started with the Nexus 4 and a string of Pixel phones ever since, I think my current is my 4th Pixel. I LOVE that it's pretty plain android, no special skins or anything like that. I've never had to interact with Google support, I've heard it's poor but have no personal experience. All my devices have worked mostly flawlessly. I've hit a handful of software bugs over the years, but they all got resolved in time and none were show stoppers.

[Skip to main content](#)[Create](#)**robtom02** • 6mo ago

I was a big Samsung fan , had every Samsung from the galaxy S2 up to the zfold3. I then switched to the original pixel fold because I really wanted the form factor and now I have the P9P fold.

I really liked Oneui and do miss the customisation of good lock and themepark. The pixel does have a plethora of AI features plus all the beta and canary releases plus takes better features.

**gilbert-maspalomas** • 6mo ago

As someone who got the S23 Ultra, then had the p8 Pro, now (still) the p9ProXL and next week the P10 ProXL so far I am content with the pixel 9 ProXL. More than with the S23 Ultra, which was fine for a year, but after that to me not really appealing any more. My husband uses it though and he`s content with it.

For me personally the good hardware along with the straight forward software and fantastic ai is just fantastic in daily uses. And above all, I do like the constant updates and upgrades that really make a positive difference...

(Gosh, who would have thought three years ago, that we now can create 8 second clips of a still photo, that look stunningly realistic? For basically free...)

**harryhov** • 6mo ago

Pixel 10 Pro XL | Pixel Watch 4-44m

I would say the cons is the cost. I'm getting a pixel 10 pro XL and it costs more than a MacBook Air.

**ShadowMelt82** • 6mo ago

Like the software the hardware besides the camera is meh, I went back to Samsung I felt it was way off in feel of UI, it felt like I matured using a pixel lol

**Lohmatiy82** • 6mo ago

I'm currently on Pixel 7 Pro (my second or third pixel phone), waiting for my 10 Pro XL (upgrading mostly due to battery degradation and because there was a good deal for upgrade).

Basically the main reasons I'm staying with pixel:

1. integrates well with my Google services (Gmail, photos, maps, etc)
2. Call screening, "hold for me", etc - I haven't spoken to a scammer in over two years, those calls just get automatically screened and declined by Google. No need to wait on the phone when calling airlines, for example, is also a good thing.
3. camera is top notch - I have not used my Canon pro-camera in years, don't even take it on vacations with me anymore. Pixel is great for family pics, kids pics, etc. and then it automatically moves them to a special album I made in photos to display around our home (see point 1)

[Skip to main content](#)[Create](#)

5. works great with and supports full functionality of my Pixel watch and Pixel Buds Pro.

Other than that - it's just an android phone. If you are used to Galaxy or iPhones - there is no particular reason to re-learn (unless you get a very good deal on Pixel and can't get it for the phone you are used to).

GamesnGunZ • 6mo ago

In general, do you often come across people giving you opinions on phones who are influenced by sponsorships?

[deleted] • 6mo ago

PienerCleaner • 6mo ago

I've had a pixel 1, 4, 6, and now 8. No reason not to get one. Short and simple answer

Goldglove528 • 6mo ago

What are the most important features to you? What do you plan to do with it? Photos, gaming, videography, casual web browsing? What kind of PC/laptop do you use? Do you use your phone for work/biz? What industry are you in? What kind of office software do you use/need? There are so many reasons why different phones might suit your needs differently/better.

Having said that, I've owned the 2XL, 6, 6a, 7 Pro, 8 Pro, & 9 Pro XL... 2XL was still my favorite thanks to the unbelievably helpful (and frankly scary) software that knew you better than you did. Google's biggest mistake ever (IMO) was to axe Google Now (IYKYK). The 6 was okay but ran warm, the 6a was fine but not amazing (screen was weird and overheated), the 7 Pro was excellent but with some camera glitches. The 8 Pro was nearly perfect, and after a year with the 9 Pro XL I am finally seeing NO reason to upgrade yearly right now. 9 Pro XL is fantastic. Smooth, flawless operation. Camera is great (but other main brands have really caught up in the camera department to be fair). Many things like spam protection and other subtle features are the unsung heroes working behind the scenes to make life better. During the ridiculous last US presidential race, friends of mine would complain about getting sometimes 5-6 spam texts PER DAY about the presidential election and donating to a particular campaign. I got ONE text that came through during the entire presidential race. Spam-prevention (while not perfect) is miles ahead of other manufacturers. I don't game at all, so if that's your thing you may want to look into a phone with a higher-spec processor but I really don't know anything about that. I use my phone heavily for calls, texts, web-based use, reddit, facebook, and lots of photos, as well as photo editing (LR, Snapseed, etc) with basically no issues.

Biggest two things I think that would make a vast improvement in daily use:

1. A dedicated 3x camera lens specifically for Portrait shots.

[Skip to main content](#)[+ Create](#)**lumpynose** • 6mo ago • Edited 6mo ago**Pixel 10 Pro**

I've always bought the base model, not the pro. The fingerprint scanner thing on the front rarely has worked. I think when they had it on the back it wasn't any better. I think there's something weird with my index finger because I redid the finger scan using my thumb and that works more reliably. This time around I ordered the pro so we'll see how it goes.

I think Android's user interface in general sucks. It typically confuses me because it's not obvious where to tap or how to navigate. I'm an old geezer who likes things from back in the old days when clickable things had a drop shadow so there was no guessing. I would die before I buy an Apple product so I have no idea if their UI is any better; I'm guessing not since I remember when they redid it and copied this dopey flat UI.

I mainly use my desktop computer for everything. Another frustration is how Google's Android apps have a different interface than their web version. E.g., YouTube. I was watching YouTube tutorials and would sometimes watch them on my Samsung tablet and YouTube on it drove me crazy. I bought a Microsoft Surface tablet and it has the same Windows 11 os as my desktop and it's surprisingly very usable on a tablet.

I use an alternative launcher, Lawn Chair. Previously I used Nova. Nova hasn't been updated in a while so I decided to try Lawn Chair and it's fine. With the Google launcher you're stuck with a search box on the home screen, and now also the thing at the top. As another said alternative launchers are trivial to switch to. They're also much more customizable than Google's.

**FergusonBishop** • 6mo ago

if you're just an average that doesnt need to do quantum computing with your phone, they're all similar enough that you'll forget about any noticable difference in a week or 2, at least imo.

Ive had a Pixel 7, OnePlus 12, CMF Phone 1, S24 Ultra, Fold 6, S25, and a Pixel 9a in the last 2 years. They all do the same job and do it perfectly fine. the only noticable thing that stands out in that entire list is how fast the OP12 charges - thats it.

**IMTONYYYY** • 6mo ago

Amazing except for the battery, it's impossible use the phone without wifi

**Zeddie-** • 6mo ago

It takes some time to get used to the quirks, and it takes some time for the quirks to work themselves out too.

[Skip to main content](#)[Create](#)

Battery and heat issues came back recently though. Maybe it's due to an update. It's now draining while idle and it looks like it has something to do with Digital Wellbeing and Fit apps or system process.

P7P have been pretty much good other than what's happening just recently that I wonder if I should even upgrade to a 10. But I really do like the design and I feel the upgrade should feel significant since I'm skipping 3 generations.

**Gil_gal** • 6mo ago

Hi,

I got a pixel 9.

I find it incredibly fluid and the smaller size (compared to the norm) is very nice.

The camera is great for most task, especially for nature and animals although I feel an optical zoom would be necessary and it overprocesses the images too many times, flattening the results.

During normal use it rarely goes over 39 degrees, even in my country which is pretty hot in the summer.

Coming from a Realme I miss fast charging a lot and found that google is less advanced in multitasking (multi window is clunky and PiP is basically non existant).

I don't use most of AI features and what I use is usually implemented directly in the app (circle to search is very nice though).

It's still basically new so I'll see how it evolves in the next years considering the mid cpu and the problems of the other units.

**pastalex42** • 6mo ago

Buggiest, jankiest consumer technology I've ever touched by a WIDE margin. I had 5 pixels in a row over the years and if they could just quit bugging out they would be my favorite phones by a mile. Love the software especially, in theory. In practice I felt like I was fighting the phone numerous times a day.

There's also Google's insistence on redesigning everything every few years, which they can never seem to roll out all at once. So you get an app or two updated to a new design every month or so. By the time everything matches, a new design language is rolling out. The consistency you should get by getting a phone made by the company who makes Android is entirely absent.

All in all they feel like a wonderful work in progress. Still.

**HappyEntry** • 6mo ago

I've used the 3, 5, 6P, 8P, and I preordered the 10P which should be arriving this week.

[Skip to main content](#)[Create](#)

People love to rave about the camera, and I like that the Pixel series consistently has one of the best camera systems built into it. However, photography and video are a couple of my hobbies, so I still prefer to do both with dedicated cameras. I carry a Ricoh GR III daily for most photos. Photography is totally subjective, but I don't really care for the digital look that phone cameras produce (not just the Pixel). Everything just looks over-sharpened and HDR-y. But like I said, totally subjective and not necessarily specific to the Pixel series. The Pixel camera is great for quick snapshots and the night mode works really well when it comes to cleaning up noise.

I've had a few problems with them over the years. The fingerprint sensor on the 6P was sort of shitty. It worked but it wasn't super reliable. And someone in my family had the green screen issue on their P8, but we got it replaced by Google with very little hassle. I haven't had any issues with P8P.

In the end, I like the Pixel line. I wouldn't be buying the 10P if I didn't. I like having the newest Android OS that's not cluttered with a ton of manufacturer-specific junk. It keeps the UI nice and clean. I know it's never the latest and greatest hardware, but that's not all that important to me as long as it's somewhat current. I will say that if I was going to switch, I'd probably go back to Samsung.

**touchingthebutt** • 6mo ago

I've had the 1 2,5,7,9 and a couple of nexus devices before that.

I've had 2 devices that needed replacement that Google covered. 7 was breaking right as the 9 was releasing. Overall positive experiences but I am in the US and most likely have gotten lucky with what Google has been able to replace. Also gotten what I was owed when I used their trade in program.

**mhn_10** • 6mo ago

Pixel 6 Pro

Pixel 3xl, pixel 4 xl, pixel 5, pixel 6 pro

Overall I'm extremely happy with all my pixels. And I'm daily'ing P6P for the last 4yrs (which many consider to be the worst pixel). But for my use case it's been great.

I don't game, or use anything super resource intensive. Remote work so mostly at home on WiFi. Mostly use it for browsing and camera (photos). Considering these scenarios, the phone still works perfectly smoothly even after 4 yrs. I'm really amazed by this. Usually I've noticed phones slowing down after 2 or 3 years. Haven't noticed that yet with P6p. Haven't faced any serious bugs or issues as well.

Personally, the things I like are, clean OS, no bloat, quick updates, amazing camera (folks are still amazed with camera quality)

Things I dont like are, weak network signals in some areas, battery has started deteriorating.

I've pre-ordered Pixel 10 Pro Xl as the current phone is cracked. Hoping it'll be quite a big upgrade for me.

Create

and clean, and honestly I haven't had any problems with bugs that people sometimes complain about. The cameras are excellent. Performance is fine. I don't do anything too heavy and it holds up just fine, even after 3 years. I suspect that if I did any heavy tasks or gaming, it might be a bit problematic. And finally the battery life has been a pleasant surprise. It lasts all day most days, and hasn't really degraded over its 3 year life. I do use adaptive charging, but don't limit it to 80%. Even with that the battery health/longevity has been great.

I'm about to trade it in for a 10 pro XL since the price got pretty good with all the deals, and I'm sure I'll appreciate the generally better performance and the few new features. Otherwise, I could see myself keeping the P7P for another couple years without issue.

**[deleted]** • 6mo ago
