Excellent-Judge-5163

...

What makes the Google Pixel so good for you?

Hey there! Im currently switching from iPhone to Android, so I take every information about every new upcoming phone or the brand itself. After all the research I see many YouTubers and bloggers who like the Pixel 10 Pro, which makes no sense imo. Isn't the whole phone just a bunch of „crap specs“ powered and improved by AI, so it's not so bad? And we didn't even talked about the higher price. Like the Tensor G5 processor is compared to the Snapdragon or Mediatekk 9500 really bad (compared in Benchmarks). For the camera, I don't really see the big differences to other cheaper brands than just that the AI produces you a better picture. The camera specs are mid and not great. At least, the battery, not even 5000 mAh, so there isn't the slightest upgrade... I could go on, which isn't the point, but I think most of you understand what I mean.

In total, I see a mid phone for people, for people who don't want to switch to the „dark side“ of android phones, the Chinese brands. So they stay with the symbolic phones of the great America (which are not anymore so great). For sure, I see the different way they go with all the AI, but at the end you should get a good value for the money, which I don't see for 1000€ or so. I mean the specs of a OnePlus 13 or the Oppo Find X9 Pro and so on, are refreshing and after a long time of „aplification“, where they stop improving the phones and the symbolic aspects are more important than ever, we have now really nice options from overseas. To end it here, I think imo people love the Google Pixels because of the same symbolic aspect at some point or they start to get into this particular role in this industry.

So now the question to all the Pixel users and the people who have the same question or just want to discuss with me, what makes the Pixel 10 Pro so good for you?

Best greetings! 🙌

Pixel 8 Pro

Basically that. Paper specs are one thing, reality is another. Btw I was part of the dark side for 15 years. HTC, Xiaomi, OnePlus, Realme and I only had flagships so no mid phones. And yet I switched 2 years ago to Pixel 8 Pro and frankly, it was one of the best tech decisions I ever made. I was scared of the specs too (although you as someone coming from iPhone and complaining about specs is funny to say the least 🤔🤔🤔). But then after months with Pixel I realized that none of the flagship of other Android brands was this smooth as far as usability goes. Sure it's not a phone for games but... Regular Mercedes is rarely as fast as Audi in the same class but name one person that can easily claim Audi is a better car than Mercedes 😄

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

I don't know dude but the OP13 has been the smoothest phone experience I ever used so far, miles better than a P9ProXL side by side, the home screen is also way less restrictive too, on Pixel it's more restrictive than iOS. Pictures go to the Pixel obviously.

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

Why does the phone with lower "numbers" always the slowest in real world app and usage tests then?

This isn't true. Just say you don't need the power. No need to cut Google so much slack.

**Particular-Cloud3684** • 2mo ago

Idk if they're cutting Google slack. More so saying their real world usage doesn't matter much with specs.

No doubt the Pixel specs are mid range for top tier pricing. But for my personal use, the 9 Pro has been great. I basically use my phone for pictures, banking, reddit, browsing the Internet and texting. My biggest issue without a doubt is they're charging a premium for a midrange device. If the phone was priced multi hundred dollars cheaper I think most people wouldn't complain.

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

Yeah that makes sense. The wording sounded like that... Coming from someone who just tried editing on a Pixel 9pro in Capcut and had to switch to using my S25 because of how slow it was to export, yes there is def a difference.

**surreal42** • 2mo ago

Buy a laptop...

[Skip to main content](#)

Create

device...what argument is that? This sub is why Google can get away with selling what they do.

**sureal42** • 2mo ago

If you can tell the difference in browsing reddit on a s26 compared to a p10...

Well. I don't know what to say, I guarantee though that 99.9% of people could not tell a difference

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

Thats obviously not my argument.

**sureal42** • 2mo ago

But it was mine...

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

For basic tasks that any phone can do there is no difference, yes. This doesn't say much especially at the prices being charged.

**RogLatimer118** • 2mo ago

You are not just buying a CPU. That's like saying if your car doesn't have 400hp it's not a great car. There are very expensive cars with not a ton of power, because they have handling and amenities that are worth it. Well the Pixel is the lower hp car with the handling and amenities. If you want the hopped-up Mustang that is powerful and somewhat crude, then that's great for you.

**Darkpurpleskies** • 2mo ago • Edited 2mo ago

Pixel 8 S25+

think about how that weak analogy works with actual pricing, efficiency and performance.

**sureal42** • 2mo ago

Special case needs are the exception. The average person uses their phone this way.

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

[Skip to main content](#)

Create

**iz_raymond** • 2mo ago

I would agree with you, if and only if, you are exclusively only using Pixel at the moment. For me, I noticed how much smoother other Android is when comparing pixel to it side by side. Don't get me wrong, Pixel is smooth on it's own, but no software optimization can beats raw physic power. Idk if it's a much higher refresh rate and touch response rate, or due to the more powerful CPU. Mind you, on any Android phone I always set the animation/transition speed to 0.5x speed instead of default 1x

[1 more reply](#)**puppy2016** • 2mo ago

Pixel 8a

Software support. But this is Android design issue that for every single security update the cooperation with the hardware vendor is required. Unlike Windows updates.

**1nolefan** • 2mo ago

This is what got me from OnePlus and xiami and Samsung - Samsung has gotten better, but to be able to run the latest and greatest android beta does for me.

Previously, for OnePlus and Samsung, you have to root and find the ROM which works and then you have to figure out which camera app I would need to download to get the camera working.

Pixel solved all that - don't need to root or find the custom rom or kernel. Did all that in my younger days, but I now prefer a stable phone OS and latest OS which the pixel provides.

**horatiobanz** • 2mo ago

Top 1% Commenter

Odd, in my experience PixelOS is far less stable than OxygenOS. You just get used to the issues on PixelOS after a while, and then when you switch away to another OS after a while you realize wow I haven't had those issues in a while . . .

**1nolefan** • 2mo ago

But I can run the version 16 when Google drops which is important to me to run the latest OS, and I am ok with mediocre hardware, but killer cameras (not sure how Google does that computational photography)

**horatiobanz** • 2mo ago

Top 1% Commenter

I mean, sure? I guess I had to wait a couple months to get Android 16 on my OnePlus 13R. And I didn't get to experience the sudden bricking that Pixel 6 users did and alarms not working that other Pixel users did when they first got Android 16.

[Skip to main content](#)

Create

day.

**1nolefan** • 2mo ago

Well not comparing, but which OS feature on Oxygen OS that I am missing out compare to Pixel

**horatiobanz** • 2mo ago

Top 1% Commenter

There are like a hundred quality of life features you are missing out on. It's too many to list.

Screen off gestures - the ability to control music, flashlight, etc from a simple gesture. Insanely useful.

Double tap to turn screen off

Three finger swipe to screenshot.

Three finger hold to take partial screenshot.

Sidebar for quick access to things like calculator and other quick apps.

File dock so you can drag and drop items to and from the sidebar.

Insanely more in depth customization of every aspect of the OS.

PixelOS is like a barren wasteland compared to OxygenOS. I could sit here for another half hour listing off individual features and I wouldn't come close to encapsulating how behind PixelOS is compared to OxygenOS. And the best part is that OxygenOS is both smoother and more stable than PixelOS even with all of this added functionality and customization.

**n00b_r3dd1t0r** • 2mo ago

Bought my 9 Pro XL on a good sale and I'll be able to use it until 2031 at the very least, something I wouldn't be able to say with an Oppo or similar chinese branded phone. Samsung i've used before, but not the biggest fan of the One UI skin and lack of quality control in the past

It's a pretty substantial upgrade from my old phone in all areas as well, a Nokia G60 5G which only got around 3 years of software updates and had a pretty middling camera and alright performance

Keyboard is perfect, insane voice typing. And a camera that does processing properly 🤖

[+](#) 2 more replies**awx10** • 2mo ago

Hmm, from an iphone user to pixel 6 pro, 7 pro, 7a.

Honestly you don't really feel the lag unless you do CPU intensive stuff.

I've used iphone 5, 6, 11, now 13 pro.

I guess for Android it's sideloading, circle to search is great. And the autocorrect in search bar !? You cant do that shit on iphone at least.

There are things that iphone is great in, and there are things that android is great in.

I have used one plus 8t, Poco x3 pro and I didn't like the android experience tbf.

Pixel changed my mind about android, I'm sure there are other great androids but google doesn't have very much bloatware.

I gotten all my phone's rather cheap, I can't justify myself to splurge on a pixel 9 pro or 10 pro for sure.

Mostly been using used phones.

**Euchre** • 2mo ago

Top 1% Commenter

Pixel changed my mind about android, I'm sure there are other great androids but google doesn't have very much bloatware.

Samsung could win over *so many more* iPhone users if they'd back off the preloaded crap, and put a leash on carriers stuffing their own bloat on their devices.

**f_ckmyboss** • 2mo ago

The only regular-sized Android with a good camera.

**cdegallo** • 2mo ago

It could very well be the case that many of the chinese options are better in some or all major areas of considerations for a phone. But for me, in the USA, I don't really have access to those. If I want a decent

[Skip to main content](#)[+](#) Create

google and have no major issues, except samsung isn't as good as google at reliably snapping quick candid shots of things like my kid, pets, etc. in a variety of lighting conditions without it ending up as a blurry mess.

I don't have any major issues with pixels, had every generation so far with a 10 pro xl right now. I am not necessarily excusing google's gap between the high-end pricing and their hardware choices like the G5 overall being a couple+ years behind other flagships, but to me the decision to get a phone is more than "does it have the highest-end CPU and GPU?"

Why I opt for pixels:

- Camera (again, your stance of asian/chinese phones are just as good or better than pixels may be accurate, but overwhelmingly those aren't available to me).
- General UI consistency and response speed (to contrast with samsung, I've most recently used an S23 ultra, z fold 6, z fold 7, and oneUI still has issues with properly responding to gestures to me, and while it does some things better in UI options, it is worse for me in some specific ways--for example, swiping horizontally along the gesture area very often does not quick-switch to the previous app, and I have to perform an exaggerated gesture. There are other things that drive my decision)
- Integration with google products and services (and promos)--I decided to trade my 9 pro xl in for a 10 pro xl recently despite not really caring about the 10 pro xl in general--and after the device trade in, google's \$600 devices discount, and the 12 months of 2TB/Gemini pro (I'd be paying for 2TB google one plan), the device was essentially zero additional cost from my 9 pro xl.

I honestly couldn't care less about any of google's AI features and functions. Nothing they've made have made a difference in my day-to-day use of my phone and I do not view any of them as a value-add to choosing to get a pixel phone.

spottedmankee • 2mo ago

Pixel 6a: cheap, no bloatware, works fine

-eschguy- • 2mo ago

Pixel 8 Pro

It's supported by r/GrapheneOS

Amazing calling features. Call Screening, and general spam and scam protection. I can't live without them now.

[Skip to main content](#)[Create](#)

releases and catch it on sale. Like right now is the perfect time to buy one. But I have both the Pixel 10 pro and One plus 13 and I prefer the Pixel. Its hard to explain it just feels better to use. I just wish they would adopt faster charging speeds 🙏

**FriuKi** • 2mo ago

At this point nothing... as the Google Team lost all its potential

**Sunr4ven** • 2mo ago

A++ Camera in a 'small' 6.3 inch phone.

**ratavieja** • 2mo ago

My reasons:

- Ability to install my own apks (though this is going to disappear in the near future, so 80% of my reasons are almost gone)
- Price. I have a 9a that costed me 350€ with a fitbit included after giving my "old" 6a
- Integrated AI. I can translate anything, can search or perform anything using Gemini with a long press of the power button. This is not even an option in iPhone.
- 7 years of updates (although I think that Apple matches or even enhances this)

**A_Turkey_Sammich** • 2mo ago

Pretty much only because my pixel 10 was free (after monthly credits of course) on my plan. Promos like that are exceedingly rare anymore on my old grandfathered plan. Getting good promos on top tier phones pretty much dried up 5 or 6 years ago. It's not a bad phone, but I like my Motorola Edge 2024 I was using prior better. Despite a weaker SOC in the Edge, there is really no difference in general feel and speed at all between the 2 with my day to day use. Only real standout noticeable differences to me are the pixel has better speakers and better camera (not that the edge's is bad). There are many tangible things that my Edge does better though like longer battery life, more basic customization options, better dimensions/weight though despite being a lesser phone. Pixel just doesn't seem like it should be anywhere near its price tag to me.

As far as Android goes...I was an iPhone user since the OG until my plan wasn't good enough for all the good promos anymore. I don't do anything intensive with my phones so didn't feel it was worth spending the money to stay at that level phone. I didn't expect much growing pain from switching as it was, but it turned out to be even less than I thought. Took to it right away and never really found myself still wishing I was using ios, even while getting used to the new surroundings. Then when RCS came along, even the green bubble thing with other iPhone users was no longer a factor. Unless you just hate change and can't deal with it, I wouldn't worry about switching OS. They are both good and plenty capable.

[Skip to main content](#)[Create](#)

Constant timely software updates. I previously had several Motorola phones through Verizon, and getting occasional (once, maybe twice a year) feature and security updates was the norm and I didn't like it.

**Double-Hall7422** • 2mo ago

I don't have a pixel because it is so good, I bought it because it was so cheap. I paid €400 for my pixel 8, only five months after it was released.

It's not a bad phone at all, don't get me wrong. It does what it needs to do, the battery and overall performance are fine, and I find it a convenient and pleasant phone to use. I don't think iPhones perform that much better, but I am convinced this one has a shorter lifespan.

**TehWildMan_** • 2mo ago

Decent hardware for the price, and doesn't have Samsung's UI customizations which I find quite annoying personally. (Matter of taste)

Although having held 2 Pixels that both got ""recalled"" *In a row* has left a bit of a sour taste.

**Darkpurpleskies** • 2mo ago

Pixel 8 S25+

I don't like how Pixel's home screen is so locked down though, I can barely do anything. Even iOS has improvements here. Wish they made some more effort, instead of relying on third-party apps. Just wanna remove app labels and stack widgets, everyone else can.

2 more replies

**Motor-Source8711** • 2mo ago

Yea, same experience with Samsung. Really annoying to use.

**Excellent-Judge-5163** **OP** • 2mo ago

At first, thanks for all the nice answers. I didn't want anyone make upset or so haha, cus now I see a few more good things in it!

**TrigBoll** • 2mo ago

Duration of support and longevity. Also how quickly they lose value (pro to me because I buy 2nd hand, would be a negative if you bought new).

[Skip to main content](#)[Create](#)

I've ordered a Pixel 9 Pro XL I got 2nd hand for a great deal.

Don't care too much about the Pixel skin, it's a little restrictive but at least there isn't a load of bloatware I have to uninstall out of the box.

frostycakes • 2mo ago

Pixel 9 Pro

Clean Android skin, long support windows, camera quality, and the lack of Qualcomm chips (yes, fuck Qualcomm and their shady business practices, I deliberately avoid devices with Qualcomm processors or modems whenever possible.)

Consistent_Scholar_5 • 2mo ago

I am not happy with it tbh. It gets very hot, after only several minutes of use. I am not a gamer, but once in a while when I start a game, after 5-10 minutes it is so hot, I cannot hold it in my hand without cover. Battery life is also not amazing, cameras are great. I came from S23, wanted to keep it for 3 years, but now after only 3 months I doubt it.

InvestingNerd2020 • 2mo ago

Not for me, Samsung S25 Ultra user, but for my wife.

Her reasons:

- Best Android camera for photos in America. We are taking lots of pictures of our daughter.
- Optimal synchronization with her Google apps.
- No bloatware.
- Smaller for her hands.
- Looks great.

pfroo40 • 2mo ago

For me, stuff mostly just works with minimal fuss. It is smooth, responsive, good screen, great camera.

moosehunter87 • 2mo ago

I always get the Xa models because they offer the best value and they work fine. I don't see any lag or anything. Cameras are always great. Why would I pay more?

[Skip to main content](#)

Create

1. Android Day one software updates Stock android without any skin or bloat
2. Camera The only android phone with great camera with 1 from above
3. AI (not so much) actually useful AI features, nice quality of life improvements

**SunnysideKJ** • 2mo ago

used to be samsung but their phones got too pricey and always filled with bloatware and despite always having the latest chips and better hardware it would still run like crap sometimes

I wanted to switch to vivo but the limited support for android auto and 4G/5G in the states makes it difficult to and I travel and drive a lot so thats a big dealbreaker

but for me

1. Not having to deal with bloatware
2. Very simple to use and gets updates super fast
3. 7 years of support
4. If you don't play the latest games like Where Winds Meet or whatever, performance is fine
5. Easy and simple to customize
6. Camera is still competitive

and then you can do GrapheneOS if you wanted to

**WackyBeachJustice** • 2mo ago

Pixel 9a

Cheap discount prices on A models for 90% of the top of the line models.

**hbzdjncd4773pprnxu** • 2mo ago

GrapheneOS, done!

**teddertl0015** • 2mo ago

yo! i recently switched from iphone to a pixel 10 myself actually (about 1.5 months ago), and for me i kind of had the following reasons:

1. pixel cameras are known to be good, and while they may not be at the top of the league they also have really good software post processing
2. for me switching to android seemed like a good decision as i prefer android due to customization and general freedom

[Skip to main content](#)[Create](#)

.. even though the sensor go is not known to be the best chip in the world, as long as you're not doing much gaming on mobile (me myself im not), you shouldnt feel a difference, especially since android is crazy optimized

hope this helped!

Wesley-3 • 2mo ago

Bloatless, stock Android, software support.

sur_surly • 2mo ago

It's not. I've been a Nexus/pixel user *forever*. The P10 was the first one I've ever returned. I ditched pixel and am happier. Still on Android, but the competition is making better phones all around. The cameras aren't as industry leading as they once were, so nothing holds the Pixel up anymore.

And it may be considered the "cleanest" Android experience but I don't like the direction they've gone. We're losing customization and being forced to use the phone at Google wants us to, just like Apple. Bye, Pixel!

And that's before getting into topics like how they advertise the 12GB ram upgrade while I'm the fine print saying you can't use any of it, it's reserved for Gemini. Yeah, no thanks.

beersane • 2mo ago

Camera. I've had several iPhone users compliment my Pixel's camera. Also the feeling of stock android.

prodygee • 2mo ago

I was able to get Pixel 10 Pro XL through work to a meager 400 euro's (including taxes). That sealed the deal for me.

The smarts are what does it for me. And instant updates.

957B • 2mo ago

I do not consider the pixel to be a mid range phone. It leads in AI and the camera is top notch. I think Google takes the approach of if it's going the thermal throttle if pushed for so long why have it. Makes sense to me. When I get on my grandma's 7 to help her with things that phone still feels snappy. That's while I own a s25 ultra. I would have no problems going back to a pixel. For me it's all about good looking photos so it is all about the camera for me

[Skip to main content](#)[Create](#)

issues with Pixels over the years that I'm somewhat sour on them, but they're still my favourite phones when it all works.

Regarding the specs comment. I don't notice the lackluster chip with my usage. I think they're overpriced at RRP, but you can always find good deals on Pixels.

**MCFLY-HILLVALLEY** • 2mo ago

Crap specs? The P10PXL works excellent, it does everything well with a long lasting battery. It takes way better photos than any iPhone. Going just by specs you'd think the iPhone was a good device, and its crap, looks and works like a toy.

**Excellent-Judge-5163** OP • 2mo ago

Haha, like I said, I was a bit in a ragebait, but I think now I see many reasons for buying one. And you're for sure right, it's not always about the specs ;)

**RogLatimer118** • 2mo ago

- Good camera. It's not just good at photos, but one underappreciated detail is that it rarely takes a bad photo. Other phones *sometimes* take really good photos, but the Pixel rarely misses a good shot due to its processing capabilities.
- Call screening is great. Both manual and automated. One day, my phone screened 12 suspected scam calls in the background and it never even rang for me.
- Voice dictation is really good and I've never really developed fast thumb typing because I can just dictate.
- Now Playing listens for songs in the background and builds a list of what I've heard so I can find out what that song was.
- The Assistant is great and I use it to set reminders, schedule things, ask questions, control the lights in my home.
- Monthly security updates and the newest OS version right when it is released.

That's the main stuff, but there are other things, too.

**RonniJGolden** • 2mo ago

Benchmarks don't really show why people like Pixels. It's the software + hardware combo, camera processing, call screening, voice features, long support, and zero bloat. You pay more for the experience, not for spec-sheet bragging rights.

**Doobidoowa** • 2mo ago

[Skip to main content](#)[Create](#)**Mysterious_End_2462** • 2mo ago

I use Pixel 8a and I love: stock, no spyware, snappy UI, long sw support, great camera, good battery life, good display, reliable operation, friendly price.

Android is customizable so there are many many apps even outside of app store.

I have been a heavy android modder who *always* tried to optimize with custom roms and all the stuff but the Pixel was the first that I did not want to hack.

**Euchre** • 2mo ago

Top 1% Commenter

My work issued me one to use as a take home device for free...

But that just gave me the chance to see how good Pixels really are. Even the 'low end' models definitely flagship devices. They're not perfect, but in so many ways they are oh so close.

**NukedForZenitco** • 2mo ago

Couldn't care less about benchmarks, the camera is great, the OS is clean. Doesn't have the best customization but that's not super important to me. Chinese roms are generally dog shit in my opinion. Some of the AI features are genuinely great, for example I use call screening 24/7. Only thing I miss from my OnePlus 12 is the fast charging.

**JohnnyAlbert** • 2mo ago

No bloatware. Frequent updates. The "iphone of androids".

**PepperCat1019** • 2mo ago

It's not a Samsung.

**krichard-21** • 2mo ago

Right now. It's the battery usage.

I just traded my Pixel 6 Pro in for a Pixel 10 Pro XL.

This battery is outstanding.

Performance is notably better. Screen looks roughly like the same.

[Skip to main content](#)[Create](#)**richpags** • 2mo ago

1. Clean OS. No bloat
2. Integration with my other Google products
3. Call Screen
4. Regular software updates

**saturnito** • 2mo ago

Yesterday I grabbed my boyfriend's iphone to take a selfie of us and I couldn't even use the volume buttons to snap the pic.

**prodygee** • 2mo ago

That's weird, that should work.

**kimbosdurag** • 2mo ago

I love it because I'm a chump loser and want a status symbol or whatever. Lol

No idea what you're hoping to get out of this thread. Coming in like the smartest guy in the room. Get whatever you want bro, no one cares. I use it because I got it for free from my phone carrier, if they offered me a Samsung whatever for free I would have taken that. I don't care if I have the single best phone on the market according to all specs.

**South-Range8401** • 2mo ago

Lmao called him out nice

**JawlessPython** • 2mo ago

Pixel 8

It's the smartest smart phone.

The more you dig in, the more features you find which aren't gimmicks but helpful in real life.

Gemini integrating with the google workspace, features like Now Playing, etc etc.

**Celmad** • 2mo ago

[Skip to main content](#)[Create](#)**JawlessPython** • 2mo ago

Pixel 8

This. The voice to text on the keyboard, and recorder app transcripts are VERY accurate.

Then other features like best take, the astrophotography mode is miles better than an iphone as well. (Am a photographer so this is important)

**HumanLikeMan** • 2mo ago

Customization and general freedom, same reason why I switched from macOS to Windows 11.

**yeisondiazicloud1991** • 2mo ago

Everything is just more convenient. I feel that you always have to do an extra step on iPhone .

**[deleted]** • 2mo ago**amifahim** • 2mo ago

To be honest, I'm not a pixel fan anymore. I pre-ordered pixel 6 and have been using it since. But it has been riddled with network issues, a lot of weird bugs, a subpart battery and a camera that over process everything. I used to be a pixel fan and wanted to give them chance again and again, but after seeing the new 10, I'm more than disappointed. Their videos haven't improved at all (compared to iphone), their cameras are taking the same photos for years, they don't give you the best processor, they have a lot of bugs and their batteries are subpart at best. If you compare the phone to something like Oppo Find X9 Pro or OnePlus 15, which give you two days battery and iphones, which give you solid camera or video capability, Pixel seems like a mid-range phone, not a flagship. I dont like IOS at all and I honestly thought pixel would be the one to beat IOS in android. But I was wrong. They are not improving.

2 more replies

**dumbestsmarrest** • 2mo ago

If you aren't a power user looking for the best camera or the best processor but want the best experience on Android without bloat or effort then the Pixel line is your only option.

The Pixel phones are the closest the average user will get to the best overall Android experience.

Even if you're someone that messes around with things they're generally just easier to deal with.

Also, I suffered through the dark days of Samsung basically limiting support for their phones to maybe 2 years and being bloated like hell so the pixels offered me a better and cheaper option back then.

Create

Pixel 8 S25+

"The Pixel phones are the closest the average user will get to the best overall Android experience"

..Meh the hype for PixelUI is so overblown, without a launcher the Pixel homescreen does even less than iOS now, theres no stacking widgets, no page sorting, worse focus modes, no removing app labels, no icon size setting, no way to select more than 1 app and move it, no basic app lock, no hiding apps.sometimes I wonder what all the praise is for.

**xxohioanxx** • 2mo ago

A lot of the praise comes from people who last used an iPhone in 2010 and assume nothing has changed since then.

Pixel 8

No bloat. Great camera. Monthly updates.
