pixel 10 & videos stuck buffering when skipping forward

seems like an underreported issue, or is it really not that widespread? i've only had my 10 pro for a couple weeks and don't spend that much time watching videos, but i did experience it pre and now post november update.

here's a good thread: [Pixel 10 Pro XL always got stuck when you speed up the videos](#)

and here's a post from a couple days ago, but sadly no responses:

https://www.reddit.com/r/GooglePixel/comments/1owkfhj/pixel_10_pro_xl_streaming_video_freezing/

for me it doesn't happen often on the youtube app, and that's where i do most my watching, but i was able to test and recreate it by trying the same video (~10 min length) on the app and then on the website through chrome. sure enough, skipping forward a couple mins on the site locks the video into constant buffering mode.

this was using strong wifi at the time and i havent tested using data. i also have adaptive connectivity on so will have to troubleshoot with it off because i know it's not a popular feature among some users, but it's disappointing the recent update didnt iron this out. then again it might not be on google's radar yet.

I also have the same issue, and I was waiting for the November updates to see if the issue will be fixed. Now I can see Google didn't try to fix anything. I also talked with many people on Google support community about this issue. Also the Google support team didn't provide any helps and they refused to do the full refund for this issue.

Here is the link from Google community: <https://support.google.com/pixelphone/thread/383126158?hl=en>

i'm glad you're leading the charge here with this! but i'm not surprised they refused the refund since this is definitely a software issue and i'm sure the fine print somehow covers their behind, since if we're honest, every phone launches with like a dozen or more software related features not working 100% correctly.

but it was a bit of relief to see that video of even display models exhibiting this behavior, so i'm sure it will be addressed eventually. there's no way the strongest pixel yet can't buffer videos.

**tkshk** • 3mo ago

It happens on Brave browser and Samsung browser as well.

**CoffeeLoverSupremo** • 2mo ago

Yep all browsers. Had to use the yt app which I hate .

**Bandito365** • 2mo ago

Unfortunately, today's December update hasn't fixed it either, although it's ever so slightly improved. Sometimes a video will play after I forward now... Sometimes

**Bandito365** • 2mo ago

Has anyone tried resetting the phone from scratch with a clean reset?

Pixel support have asked me to do this and I legitimately cannot be bothered to go through with it unless I know it will fix the issue. I'm genuinely bewildered by this issue and pissed off at this stage.

**Citan_KL OP** • 2mo ago

man.. you're going to hate hearing this, but i did.. only because i originally did a backup restore from my (broken) Pixel 3 to the brand new P10P, which i later found out was a bad idea (all the default app notification sounds were missing, plus who knows what else..)

i cant remember the exact timeline of events anymore, but i got the phone Oct 30, video playing sucked, within a week's time i did the factory reset (probably right around the Nov update), video playing still sucked because i made this post Nov 15, and around a week+ after that i stopped having the issue. based on that, i'm not confident the reset was the fix. but if you're restoring a backup from an older version of Android, it's not a bad idea to do anyway.

(i'm pissed the magnifier quick setting becomes unusable after every reboot. not that i use it much, but it's been known since release and still not fixed. and today at a glance weather vanished, which i'm

There is absolutely no way this isn't a widespread issue. It's probably the majority of people stick to the apps and don't bother with the browser for videos.

I would have already returned the phone by now if I didn't like everything else about it so much!

**Citan_KL** **OP** • 2mo ago

not enough people going hard like [Evan](#) here lol.. though now they're beefing about getting a refurb back instead of new, which didnt fix the issue anyway! there's a post from 3 days ago saying a factory reset didnt help, so it's up to you if you have a night to kill. i hate it and always forget where half the settings are.

**CoffeeLoverSupremo** • 2mo ago

Exactly.

**CoffeeLoverSupremo** • 2mo ago

Many many times.

**Bandito365** • 2mo ago

This is an insane glitch. I just got a pixel 10 pro at the weekend and am having the exact same issue.

Cannot forward any video via the web browser without it getting stuck on buffering and unable to play.

I'm assuming given the lack of noise on this issue online that it's just a select lucky few that are dealing with this?

**Citan_KL** **OP** • 2mo ago • Edited 2mo ago

i dont even know what to think anymore, because for the last week the problem has almost entirely gone away on my end.. honestly videos have been playing perfectly. maybe they pushed an update (i dont keep great track of what i update and when), but the november update did NOT initially solve it, and your post is evidence. but stay patient and i think it'll iron itself out... somehow.

**Bandito365** • 2mo ago

Thanks for the update! Much appreciated and I'm glad it's worked itself out somehow on your end. Hopefully my phone will follow suit but I'm currently fully updated. Loving the phone apart from this, I've spent the last couple generations of phones with the galaxy ultras and seriously

[Skip to main content](#)[Create](#)**Citan_KL** [OP](#) • 2mo ago • Edited 2mo ago

i wish i could think what else i fiddled with in the meantime, but other than just slowly going through the app list (system apps included) and disabling background battery + data on any apps that don't require it, or i'm not regularly using.. nothing special, really.

**amartins02** • 2mo ago

I started the post in OP's second link.

No fix with the December update.

I pull out my S25 Ultra and no issues whatsoever. Really disappointed in this purchase. Going to offload it right after my 4 month lock in for the Google Fi offer is over.

Don't get me started on the janky scrolling in web pages and the home screen.

**Citan_KL** [OP](#) • 2mo ago

damn, so it's hasn't improved at all? I actually had it happen again this morning, but like I said in a previous update it's become a rare occurrence for me. in fact I just did a test skipping forward huge chunks on long videos without giving them any time to buffer and there were zero hangups, so I'm gonna knock on wood for now.

the phone does seem oddly half baked in some respects. just yesterday I had the screen lock and become completely unresponsive while driving and using Google maps. a hard reset fixed it but it was a stressful situation at a most inopportune time.

**amartins02** • 2mo ago

Yea still happening. Just now I went to the home screen and my home button and apps button on the nav bar disappeared. Only had the back button. Again, super disappointing. It's saving Grace is the camera.

I got a 20% back offer on the One Plus 15. Gonna trial that and see if it suits my needs. If so I'll keep it, offload the Pixel Pro 10 XL and apply those funds toward the 15.

**Choochmunky** • 2mo ago

Just adding my voice to this. P10pxl with the same problem. I'm not very impressed, coming from a basic Motorola with Zero issues.

while playing 1080p YouTube videos in Firefox (Iceraven) and compared it with Cromite browser without this extension playing the same videos. Definitely not a problem on other phones (previously p9p) but while waiting for a fix, this seems to be working for my p10p for now.

<https://addons.mozilla.org/en-US/firefox/addon/enhanced-h264ify/>

Bandito365 • 1mo ago

This also works for me so thanks for that. Sadly it's only for YouTube though and nothing else

eldrag0 • 1mo ago

Thanks for the workaround, fixed the issue on Firefox for my pixel 10

Hi, I'd recommend contacting the Pixel support team via phone or chat [here](#). They can take a look at it.

Citan_KL **OP** • 3mo ago

thanks, i will, but i might have to carve out a nice little chunk of time first judging by the amount of hoops you had the other guy jump through in the support thread.. i realize the more data specific to our device the better, but it's not some elusive bug. i just recreated it again at will: queue up the same (~10min) youtube video on app and chrome and skip forward on both. chrome vid buffers into eternity (and my chrome settings are still the stock/recommended options).

Middle-Quarter-2737 • 3mo ago

You can send them more videos or reports if they ask you to do. But I honestly don't think that will change anything, I already sent them 4 videos and 3 different reports. I feel that Google support team doesn't really care about this, cause they didn't even try to offer me any solutions or compensation. If this is the way they take care loyal customers, then for sure I won't be stupid to buy anything from them again. As I had Pixel 6, Pixel 7, Pixel 9 Pro and now Pixel 10 Pro XL.

Citan_KL **OP** • 2mo ago

hey, this just came to me and i dont know if it can be related, but normally i set a static ip and configure dns as soon as i set up any new device.. this time i did not. in fact, i want to say the video problem sorted itself out right around the time i finally got around to doing that.

i use cloudflare dns on my router as well as my phone's individual wifi connections. under chrome's secure dns setting i believe i usually kept that OFF, but currently have had it set to Custom > adguard dns (<https://dns.adguard-dns.com/dns-query>).

[Skip to main content](#)[Create](#)**Bandito365** • 2mo ago

Bit of an update on this

I have noticed that if I use the chrome browser I can get the video playing again if I drop out to the all tabs view and reselect the tab with the video. It'll kick the video into playing again

This won't work on Brave which is my browser of choice

I would love it if we could get some traction on this and get people who have never checked before to take a look to see if this is a pixel wide issue or just us unlucky few.

**Citan_KL** **OP** • 2mo ago

yeah, switching tabs or minimizing back to home screen would kickstart it again on chrome. i just did my test on m.youtube.com and for a moment it seemed like the problem returned, but the first video (a 14 minute SwitchUp review) was just slow and would take 5+ seconds to buffer large chunks; next 2 videos were much quicker, but still slightly slower than how all 3 behaved on the youtube app, which buffered almost instantly. shorter videos, like movie trailers on imdb or highlights on [nhl.com](https://www.nhl.com), for example, never get stuck.

Beta QPR 3 doesn't fix it either

**CoffeeLoverSupremo** • 2mo ago

I made this. No editing. <https://m.youtube.com/watch?v=c1sk0BJwzSU>

**PositivelyAbsurd** • 1mo ago

I'm having the same problem on my pixel 10 pro with brave browser.

Create

**Street-Gur8639** • 1mo ago

Hi all I have the same problem with a app from my tv provider It pisses me off have 2 pixel the normal 10 and the pro and the problem is equal in both I'm sure I have the problem in more streaming Sorry my English I'm from PT and I promise I'll do my best

**BendOvaForWhat** • 26d ago

Same problem for me. Trying to watch YouTube in the Brave browser. My Pixel 7 worked fine, but after switching to the 10 Pro it has been a pretty consistent issue.
